

CHEM-A-THON 3.0

EVENT REPORT

Chem-A-Thon has been the flagship event of AiChE-VIT since the last 2 years and was organised for the third time now as Chem-A-Thon 3.0 on 22nd-23rd February.

Chem-A-Thon is a round-the-clock 36 hour hackathon in which the students are given problem statements related to various fields of Chemical Engineering, for which they had to design and fabricate models aimed towards solving the specific complications.

Chem-a-Thon 3.0 saw an active participation of more than 120 students.

Chem-a-thon 3.0 started with an Inaugural ceremony in Rajaji Hall in the presence of the Chief Guest Mr. C Subash Chandra Bose, The Dean of SCHEME Dr. Shishir Kumar Behera, AiChE-VIT Faculty Coordinator Dr. Monash P along with Professors of various departments and the students. Mr. C. Subash Chandra Bose has been Whole-Time Director of Works at Manali Petrochemicals Limited since May 28, 2017. Mr. Bose is a Chemical Engineer from Coimbatore Institute of Technology and later joined Manali Petrochemicals Limited (MPL) in 1993 as an

Engineering Management Service Trainee. He has more than 25 years of experience in his career which started in MPL.

Serving as an Assistant Vice President of Technical Services at Manali Petrochemicals Limited until April 10, 2017 he also took up the post of General Manager of Research & Development.

He served as an Assistant Vice President of Technical Services, R&D, Sourcing & HR at Manali Petrochemicals Limited since April 10, 2017. Mr. Bose has expertise in manufacturing, product development, new formulations, quality assurance, human resources and other gamut of operations. He has handled various other activities also and has a bird's eye view of the entire operations of the company. Mr. Bose has been one of the being one of the key players in enhancing the operational efficiency of the manufacturing facilities especially in batch time reduction, sir has improved the production substantially.

The inauguration covered the release of the 5th edition of AIChE-VIT newsletter, followed by the Theme Release for Chem-A-Thon 3.0. Refreshments followed soon after the ceremony.

Chem-A-Thon started at 11am of the 22nd February, where the student teams were provided with their inventories and the specific problem statements. The student teams worked tirelessly for the 36 hours. The students were provided with additional supplies they needed, within reason. Meal breaks, along with refreshment breaks were scheduled timely. This span of Thirty six hours included 3 checkpoints conducted by various mentors to overlook and guide the students.

The final presentation of the fabricated models was held in CS Hall. The inspection by various judges started from 3pm onwards. The student teams were marked on various technical as well as presentation basis.

The invigilation came to an end at 5pm. The toe-to-toe competition strained the judges to decide the winners.

The 36 hour thon concluded with the Gala extravaganza in the evening from 7pm which was followed by the prize distribution and ended with the gala dinner.

Chem-A-Thon 3.0 was a huge success and even though the extravaganza came to an end, Chem-A-Thon 3.0 left a huge impact on the minds of the young industrialists and budding Chemical Engineers, for they were mesmerized by the practical knowledge and also got to know about the technical know-how of various industries.

SCHEDULE:-

CHEM-A-THON 3.0 (A Chemical Hack)

Program Schedule

22nd and 23rd February, 2019

DAY-1 (22nd February 2019)		
Time	Activity	Venue
9:00 AM TO 10:00 AM	Inauguration	Rajaji Hall
10:00 AM TO 10:30 AM	Refreshment	SMV G26
10:30 AM TO 1:00 PM	Model Development– (Phase 1)	SMV G26 , SMV G29, SMV 127
1:00 PM TO 2:00 PM	Lunch Break	
2:00 PM TO 2:30 PM	Checkpoint -1	SMV G26 , SMV G29, SMV 127
2:30 PM TO 5:30 PM	Model Development-(Phase 2)	SMV G26 , SMV G29, SMV 127
5:30 PM TO 6:00 PM	Refreshment	SMV G26
6:00 PM TO 8:00 PM	Model Development- (Phase-3)	SMV G26 , SMV G29, SMV 127
8:00 PM TO 9:00 PM	Dinner Break	
9:00 PM TO 9:30 PM	Checkpoint -2	SMV G26 , SMV G29, SMV 127
9:30 PM TO 11:59 PM	Model Development-(Phase-4)	SMV G26 , SMV G29, SMV 127

DAY-2 (23rd February 2019)		
Time	Activity	Venue
12:00 AM TO 12:30 AM	Refreshment	SMV G26
12:30 AM TO 8:00 AM	Model Development – (Phase-5)	SMV G26 , SMV G29, SMV 127
8:00 AM TO 9:00 AM	Breakfast	
9:00 AM TO 9:30 AM	Checkpoint -3	SMV G26 , SMV G29, SMV 127
9:30 AM TO 11:00 AM	Model Development-(Phase-6)	SMV G26 , SMV G29, SMV 127
11:00 AM TO 11:30 AM	Refreshment	SMV G26
11:30 AM TO 1:00 PM	Model Development-(Phase-7)	SMV G26 , SMV G29, SMV 127
1:00 PM TO 2:00 PM	Lunch Break	
2:00 PM TO 2:30 PM	Checkpoint-4	CS HALL
2:30 PM TO 3:30 PM	Model Display (Presentation)	CS HALL
3:30 PM TO 4:00 PM	Refreshment	SMV
4:00 PM TO 5:30 PM	Model Evaluation	CS HALL
5:30 PM TO 6:00 PM	Results and Cultural	GREENOS
6:00 PM TO 7:00 PM	Valedictory/Prize Distribution	GREENOS
7:00 PM TO 8:00 PM	Dinner	GREENOS

- **Inventory Distribution will start from 11:00 AM, 22ND February, 2019 @ SMV Registration Desk.**
- **Checkpoint would consist of participant's attendance, mentor's check on the model development and interaction between faculties and participants.**

CHEM-A-THON 3.0

WASTEWATER TREATMENT

Palampur is a village located on the outskirts of a city, known for its lakes and rivers, which are abundant in clear water. Prior to the industrialization of the village, the pollution of the rivers and streams was not as significant a problem. In recent years, the public has been facing numerous problems due to waste products being indiscriminately released into water bodies beyond the safe levels. This is proving to be detrimental to the local population, who grow orchard crops, spices and vegetables.

The waste, a combination of domestic and industrial effluents, comprises of nitrogen, phosphorus and some heavy metals from fertilizers along with the other hardness causing chemicals. It also contains certain domestic liquids like oil, soaps, and detergents. The presence of these has led to eutrophication in the water bodies. The amount of certain soluble organic materials in the water has also increased to a high level.

The following are some of the reasons that complicate the water treatment process:

- Active ingredients (i.e. any chemical, plant extract, pheromone, or microorganism) in pesticide production
- Contaminants that exist as impurities in the active ingredients
- Additives that are mixed with the active ingredients (wetting agents, diluents, or solvents, extenders, adhesives, buffers, preservatives, and emulsifiers)
- Degraded substances that are formed during chemical or microbial degradation of the active ingredient increase the pollutants.

The municipality has been keeping a check on the water supply system in the village, the quality of which has deteriorated over time. The amount of contaminants in the water supply sources has increased exponentially over a short span. It has been decided that a cost effective water treatment plant needs to be set in action in order to control the levels of contaminants present in the water imparted by the fertilizers, pesticides and the domestic wastes. The municipality has issued a set of specifications for the plant:

Plant Capacity	60000 m ³ /day
pH	~7
TDS	<150ppm
VOC	<0.01ppm
Oil and Grease	<15ppm
TSS	<10ppm
Water recovery percentage	>15%
Process type	Continuous process
Outlet water temperature	<35°C

In order to encourage the local population to continue farming and cultivation as their main occupation, the municipal authorities have instructed that a portion of the purified water is to be used to irrigate the farmlands. A separate amount has been allocated for the same since the reduction in production is affecting the markets in the nearby city. The authorities have also imposed restrictions on the capital, operating and maintenance costs allotted for the plant as a result of a large sum being spent on cleaning the water bodies. Upgrading wastewater treatment systems are also expensive for municipalities and ratepayers. Hence the process must be optimized for cost.

As a member of the planning committee of the plant, come up with methods to be employed to get rid of the forementioned pollutants and devise a suitable irrigation system for the farms. In addition, ensure that the water is free of any color, odor, solid particles and falls within the limits set by the municipality. Prepare a small model of the same and present your innovative idea highlighting its efficiency and cost-effectiveness.

CHEM-A-THON 3.0

PROCESS INTEGRATION

Mixon Exchangers are specialized in heat exchanger fabrication for specific customer application serving a wide variety of processing industries. As a leader in heat exchanger fabrication, our engineers will model various heat exchange configurations for customers to optimize specified customer thermal requirements.

We realize customer needs can vary, from very small to very large units. Mixon is capable of building large units of up to 15 feet in diameter and over 200,000 pounds. We also build many smaller units, including those used in the pilot plant and for R&D testing. We cater to a wide variety of unique customer needs in differing markets.

Mixon's heat exchanger fabrication capability includes certifications to fabricate using a range of materials, including stainless, carbon and specialty alloys. In addition, Mixon is certified in required welding and other fabrication procedures.

Heat exchangers are defined as devices that transfer heat from one liquid or gaseous substance to another in order to change the temperature of the substance for another process. Heat exchangers are constructed with thermally conducted tubes or plates.

Heat exchangers are heat transferring devices used to move heat from one gaseous or liquid substance to another for the purpose of either heating or cooling a substance for another process. Constructed with thermally conductive plates or tubes, heat exchangers are used to transferring heat from water to water, air to air, water to air or steam to other liquids – such as lubrication oil. Many industrial processes require heat exchangers to perform a crucial role in the design, operation, and maintenance of heating systems, air-conditioning systems, vehicle operation, power generation, refrigeration, chemical processing, offshore oil rigging, and engineering systems. They can also be used in the process of waste heat recovery in industrial facilities. Mixon Exchanger is facing a problem in designing a heat exchanger for reducing the temperature of oil and water for forming an emulsion at room temperature. An emulsion is a mixture of two or more liquids that are normally immiscible (unmixable or unblendable). Emulsions are part of a more general class of two-phase systems of matter called colloids. In an emulsion, one liquid is in the dispersed phase and the other in the continuous phase.

For a given quantity of oil and water at a higher temperature ($>$ room temperature), your goal is to form a stable emulsion of oil and water using the required surfactants. The design must consist

of a heat exchanger and emulsifier system which reduces the temperature of the given liquids and also form an emulsion.

CHEM-A-THON 3.0

INDUSTRIAL PROBLEM STATEMENT

Our planet, Earth has large reserves of oil and gas trapped deep beneath its surface. Occasionally, these reserves develop cracks and some of the oil or gas seeps out. However, this is a part of nature and rarely causes any major damage. On the other hand, there are times when the same problem is caused because of human interference then it will cause a great deal of damage to marine ecosystems. In the last thirty years, the issue of oil spills and their effects has taken on much importance. This is because when an oil spill occurs, it causes a multitude of problems for the environment and us.

An oil spill happens when liquid petroleum is released into the environment by vehicle, vessel or pipeline. It happens on a large scale and is mostly seen in water bodies. It happens due to human negligence and is a major form of pollution. There are many sources of oil spills. Crude oil can be released by tankers on land. In water bodies, the spill occurs due to drilling rigs, offshore oil platforms and well. An oil spill and their effects can also be experienced with refined petroleum or even waste oil from large scale industries. What is common in all of them is that the damage caused by them is permanent and takes a long time to clean up.

A similar problem has occurred between two towns, town A and town B. They are 500 km apart. Town A is an oil abundant town and it supplies oil to town B. The oil transport route is through a sea as it is the shortest route. During the last transport, due to collision with an underground rock, the cargo ship carrying oil has spilled a major volume of the oil into the sea. This accident has not only affected the oil supplier's profit but has also caused a lot of damage to marine life. Situations like this are unpredictable and may happen at any time. Due to this spillage, the government is putting a lot of pressure on your company (ABC Water Solutions) to find a solution to this problem.

As a senior engineer, the board of directors of your company has assigned you and your team the job for the same. Design a prototype model which can help in such situations. The model should separate oil from water and the separation mechanism should be automatic. You can manually arrange the setup, but the separation should be one touch mechanism. Also, oil recovery from the water will be appreciated.

Participants will be given 3 minutes to run their autonomous model at the time of display.

LIST OF WINNERS:-

- Wastewater Treatment:-

- **1st Prize:**

ANNIKKA KUMAR	18BCM0116
VASU GANESHIYA	18BIT0414
Soma Shivatej	17BME0199
Shalini Mantri	18BCM0110
B.Harinag	18BCM0096
R. Laxman	18BCM0113

- **2nd Prize:**

SATYA MEDHA	18BCM0126
Madhumithra.N	18BCM0143
Yeswanth Tulasi	18BCM0076
Adhityan V	18BCM0015
S. Sanjay	18BCM0056
Shivakathir A	18BCM0021

- **3rd Prize:**

ANAGHA E K	18BCM0123
RISHI VARDHAN	18BCM0125
KALPAK CHAKRABORTY	18BCM0122
ANANYO SENGUPTA	18BCM0127
Riddhi Goel	18BCM0107
VAIKUNT RAJESH	18BCM0004

- Process Integration:-

- **1st Prize:**

HARSHDEEP SINGH BAKSHI	17BCM0044
VANSHIKA GULIA	17BCM0072
AAKASH DUBEY	17BCM0057
AYUSHI AGRAWAL	17BCM0069
MRIGANK SHARMA	17BCM0019
AAYUSHREE KONWAR	17BCM0070

- **2nd Prize:**

SHRISTI GHOSH	17BCM0020
SRI SANGARI	17BCM0045
ANAND B K	17BCM0100
SIDDHANTH DEVDAS	17BCM0035
ANUP R M	17BCM0055
VISALAKSHI KRISHNAN	17BCM0042

▪ **3rd Prize:**

Pranesh M	17BCM0005
M Bharath Varshan	17BCM0006
N.Shahrukh Hussain	17BCM0012
Shashank Ravichandar	17BCM0007
Subramanian R	17BCM0092
Rohit T	17BCM0003

• **Industrial Problem Statement:**

▪ **1st Prize:**

ACHAL PATEL AAPAN	16BCM0068
BHATTACHARYA	16BCM0026
JAYRAJ MAHADIK	16BCM0029
ANIL KUMAR VINAYAK	16BCM0082
VASU SHARMA	16BCM0018
TEJAS MAGDUM	16BCM0073

▪ **2nd Prize:**

Rishabh Bothra	16BCM0074
Nandini Malik	16BCM0040
Nandini Jain	16BCM0046
Anjali Kabra	16BCM0003
Sushmit Bafna	16BCM0076
Baishayan Gupta	16BCM0044

▪ **3rd Prize:**

Sanjiv R Makayi	16BCM0020
S. R Susanth	16BCM0058
Simpson Raj Immanuel	16BCM0005
Kiran R	16BCM0014
Deepankar KA	16BCM0032
Navonil Banerjee	16BCM0057
