

**VIT**<sup>®</sup>

**Vellore Institute of Technology**

(Deemed to be University under section 3 of UGC Act, 1956)

**SCHOOL OF CIVIL ENGINEERING**

**M. Tech. Construction Technology  
and Management**

(M.Tech. MCT)

Curriculum

*(2019-2020 admitted students)*

## **VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY**

Transforming life through excellence in education and research.

## **MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY**

**World class Education:** Excellence in education, grounded in ethics and critical thinking, for improvement of life.

**Cutting edge Research:** An innovation ecosystem to extend knowledge and solve critical problems.

**Impactful People:** Happy, accountable, caring and effective workforce and students.

**Rewarding Co-creations:** Active collaboration with national & international industries & universities for productivity and economic development.

**Service to Society:** Service to the region and world through knowledge and compassion.

## **VISION STATEMENT OF THE SCHOOL OF CIVIL ENGINEERING**

- To be internationally recognized in Civil Engineering through groundbreaking contributions and exceptional leadership for sustainable development of the society.

## **MISSION STATEMENT OF THE SCHOOL OF CIVIL ENGINEERING**

- To pioneer the emerging technology in Civil Engineering.
- To address the complex societal scale challenges in areas of resilient infrastructure, smart and sustainable cities, water and energy security, climate change, mobility of goods and people, and environmental protection.
- To inspire and nurture innovative leaders and entrepreneurs.

## **M. Tech. Construction Technology and Management**

### **PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)**

1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
3. Graduates will function in their profession with social awareness and responsibility.
4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
5. Graduates will be successful in pursuing higher studies in engineering or management.
6. Graduates will pursue career paths in teaching or research.

## **M. Tech. Construction Technology and Management**

### **PROGRAMME OUTCOMES (POs)**

- PO\_01: Having an ability to apply mathematics and science in engineering Applications
- PO\_02: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment
- PO\_03: Having an ability to design and conduct experiments, as well as to analyse and interpret data, and synthesis of information
- PO\_04: Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice
- PO\_05: Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems
- PO\_06: Having adaptive thinking and adaptability in relation to environmental context and sustainable development
- PO\_07: Having a clear understanding of professional and ethical responsibility
- PO\_08: Having a good cognitive load management skills related to project management and finance

## **M. Tech. Construction Technology and Management**

### **PROGRAMME SPECIFIC OUTCOMES (PSOs)**

On completion of M. Tech. (Construction Technology and Management) programme, graduates will be able to

PSO\_01: Acquire knowledge of construction materials, construction management, project management, contract legal requirement and management of funds.

PSO\_02: Innovate in technology development, engineering system implementation and interact with their peers in other disciplines in industry and society.

PSO\_03: Independently carry out research / investigation to solve practical problems and write / present a substantial technical report/document

## M. Tech. Construction Technology and Management

### CREDIT STRUCTURE

#### Category-wise Credit distribution

Category	Credits
University core (UC)	27
Programme core (PC)	22
Programme elective (PE)	15
University elective (UE)	6
Bridge course (BC)	
Total credits	70

## M. Tech. Construction Technology and Management

### DETAILED CURRICULUM

#### University Core

S. No.	Course Code	Course Title	L	T	P	J	C
1.	MAT6001	Advanced Statistical Methods	2	0	2	0	3
2.	ENG5001	Fundamentals of Communication Skills	0	0	2	0	1
3.	ENG5002	Professional and Communication Skills	0	0	2	0	1
4.	FRE5001	Francais fonctionnel	2	0	0	0	2
5.	GER5001	Deutsch fuer Anfaenger	2	0	0	0	2
6.	STS5001	Essentials of Business Etiquettes	3	0	0	0	1
7.	STS 5002	Preparing for Industry	3	0	0	0	1
8.	SET5001	Science, Engineering and Technology Project – I	0	0	0	0	2
9.	SET 5002	Science, Engineering and Technology Project – II	0	0	0	0	2
10.	CLE6099	Master's Thesis	-	-	-	-	16

### Programme Core

S. No.	Course Code	Course Title	L	T	P	J	C
1.	CLE5017	Construction Practices And Equipment	2	0	0	4	3
2.	CLE5018	Modern Construction Materials	2	0	0	4	3
3.	CLE5019	Construction Planning and Scheduling	2	0	0	4	3
4.	CLE5020	Contract and Administration Planning	3	0	0	0	3
5.	CLE5021	Construction Economics and Finance	3	0	0	0	3
6.	CLE5022	Supply Chain Management (SCM)	2	2	2	0	4
7.	CLE5023	Computer Application In Infrastructure Management	1	0	2	4	3

## M. Tech. Construction Technology and Management

### Programme Elective

Sl. No.	Course Code	Course Title	L	T	P	J	C
1.	MGT6001	Organizational Behaviour	2	0	0	4	3
2.	CLE6026	Construction Personnel Management	3	0	0	0	3
3.	CLE6027	Quality Control and Safety	2	0	0	4	3
4.	CLE6028	Project Formulation and Appraisal	3	0	0	0	3
5.	CLE6029	Infrastructure development and BOT, BOOT Projects	2	0	0	4	3
6.	CLE6030	Estimating, Tendering and Bidding	3	0	0	0	3
7.	CLE6031	Formwork for Concrete Structures	3	0	0	0	3
8.	CLE6032	Prefabricated Techniques and Management	3	0	0	0	3
9.	CLE6033	Green Building and Energy Management	3	0	0	0	3
10.	CLE6034	Automation in Construction Industry	3	0	0	0	3
11.	CLE6035	Construction Techniques of Steel and Concrete Composite Structures	3	0	0	0	3
12.	CLE6036	Construction Techniques of Deep Foundations	3	0	0	0	3
13.	CLE6037	Flexible and Rigid Pavements	3	0	0	0	3
14.	CLE6004	Repair and Rehabilitation of Structures	3	0	0	0	3
15.	CLE6008	Environmental Impact Assessment	3	0	0	0	3
16.	CLE6013	Occupational Health and Industrial Safety	3	0	0	0	3
17.	CLE6022	Urban Planning and Sustainability	3	0	0	0	3

<b>MAT6001</b>	<b>ADVANCED STATISTICAL METHODS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>2</b>	<b>0</b>	<b>2</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>None</b>	<b>Syllabus Version</b>				
		2.0				
<b>Course Objectives</b>						
<ol style="list-style-type: none"> <li>1. To provide students with a framework that will help them choose the appropriate descriptive statistics in various data analysis situations.</li> <li>2. To analyse distributions and relationships of real-time data.</li> <li>3. To apply estimation and testing methods to make inference and modelling techniques for decision making using various techniques including multivariate analysis.</li> </ol>						
<b>Expected Course Outcome</b>						
At the end of the course the students are expected to						
<ol style="list-style-type: none"> <li>1. Understand the concept of correlation and regression model and able to interpret the effect of variables, regression coefficients, coefficient of determination.</li> <li>2. Make appropriate decisions using inferential statistical tools that are central to experimental research.</li> <li>3. Understand the statistical forecasting methods and model fitting by graphical interpretation of time series data.</li> <li>4. Construct standard experimental designs and describe what statistical models can be estimated using the data.</li> <li>5. Demonstrate R programming for statistical data</li> </ol>						
<b>Module:1</b>	<b>Basic Statistical Tools for Analysis:</b>	<b>4 hours</b>				
Summary Statistics, Correlation and Regression, Concept of $R^2$ and Adjusted $R^2$ and Partial and Multiple Correlation, Fitting of simple and Multiple Linear regression, Explanation and Assumptions of Regression Diagnostics						
<b>Module:2</b>	<b>Statistical inference :</b>	<b>9 hours</b>				
Basic Concepts, Normal distribution-Area properties, Steps in tests of significance –large sample tests-Z tests for Means and Proportions, Small sample tests –t-test for Means, F test for Equality of Variances, Chi-square test for independence of Attributes.						
<b>Module:3</b>	<b>Modelling and Forecasting Methods:</b>	<b>9 hours</b>				
Introduction: Concept of Linear and Non Liner Forecasting model ,Concepts of Trend, Exponential Smoothing, Linear and Compound Growth model, Fitting of Logistic curve and their Applications, Moving Averages, Forecasting accuracy tests. <b>Probability models for time series:</b> Concepts of AR, ARMA and ARIMA models.						
<b>Module:4</b>	<b>Design of Experiments:</b>	<b>6 hours</b>				
Analysis of variance – one and two way classifications – Principle of design of experiments, CRD – RBD – LSD, Concepts of $2^2$ and $2^3$ factorial experiments.						
<b>Module:5</b>	<b>Contemporary Issues:</b>	<b>2 hours</b>				
Industry Expert Lecture						
<b>Total Lecture hours</b>					<b>30 hours</b>	
<b>Text Book(s)</b>						
1.	Applied Statistics and Probability for Engineers, Douglas C. Montgomery George C. Runger, 6 <sup>th</sup> edition, John Wiley & Sons (2016),					
2.	Time Series Analysis and Its Applications With R Examples, Shumway, Robert H., Stoffer, David S., 4 <sup>th</sup> edition, Springer publications (2017)					

<b>Reference Books</b>			
1.	The Elements of Statistical Learning: Data Mining, Inference, and Prediction, Trevor Hastie and Robert Tibshirani, 2 <sup>nd</sup> Edition, Springer Series, (2017)		
2.	Introduction to Probability and Statistics: Principles and Applications for Engineering and the Computing Sciences, J. Susan Milton and Jesse Arnold, McGraw Hill education (2017)		
<b>Mode of Evaluation:</b> Digital Assignments, Quiz, Continuous Assessments, Final Assessment Test			
<b>List of Challenging Experiments (Indicative)</b>			
1.	Computing Summary Statistics using real time data		<b>3 hours</b>
2.	Plotting and visualizing data using Tabulation and Graphical Representations.		<b>3 hours</b>
3.	Applying simple linear and multiple linear regression models to real dataset; computing and interpreting the coefficient of determination for scale data.		<b>3 hours</b>
4.	Testing of hypothesis for Large sample tests for real-time problems.		<b>2 hours</b>
5.	Testing of hypothesis for Small sample tests for One and Two Sample mean and paired comparison (Pre-test and Post-test)		<b>2 hours</b>
6.	Testing of hypothesis for Small Sample tests for F-test		<b>2 hours</b>
7.	Testing of hypothesis for Small Sample tests for Chi-square test		<b>2 hours</b>
8.	Applying Time series analysis-Trends. Growth ,Logistic, Exponential models		<b>2 hours</b>
9.	Applying Time series model AR , ARMA and ARIMA and testing Forecasting accuracy tests.		<b>3 hours</b>
10.	Performing ANOVA (one-way and two-way), CRD, RBD and LSD for real dataset.		<b>3 hours</b>
11.	Performing 2 <sup>2</sup> factorial experiments with real time Applications		<b>2 hours</b>
12.	Performing 2 <sup>3</sup> factorial experiments with real time Applications		<b>3 hours</b>
<b>Total Laboratory Hours</b>			<b>30 hours</b>
<b>Mode of Evaluation:</b> Weekly Assessments, Final Assessment Test			
Recommended by Board of Studies		25-02-2017	
Approved by Academic Council		No. 46	Date 24-08-2017

<b>ENG5001</b>	<b>Fundamentals of Communication Skills</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>0</b>	<b>0</b>	<b>2</b>	<b>0</b>	<b>1</b>
<b>Pre-requisite</b>	Not cleared EPT (English Proficiency Test)	<b>Syllabus version</b>				
		1.0				
<b>Course Objectives:</b>						
1. To enable learners learn basic communication skills - Listening, Speaking, Reading and Writing						
2. To help learners apply effective communication in social and academic context						
3. To make students comprehend complex English language through listening and reading						
<b>Expected Course Outcome:</b>						
1. Enhance the listening and comprehension skills of the learners						
2. Acquire speaking skills to express their thoughts freely and fluently						
3. Learn strategies for effective reading						
4. Write grammatically correct sentences in general and academic writing						
5. Develop technical writing skills like writing instructions, transcoding etc.,						
<b>Module:1</b>	Listening	<b>8 hours</b>				
Understanding Conversation, Listening to Speeches, Listening for Specific Information						
<b>Module:2</b>	Speaking	<b>4 hours</b>				
Exchanging Information, Describing Activities, Events and Quantity						
<b>Module:3</b>	Reading	<b>6 hours</b>				
Identifying Information, Inferring Meaning, Interpreting text						
<b>Module:4</b>	Writing: Sentence	<b>8 hours</b>				
Basic Sentence Structure, Connectives, Transformation of Sentences, Synthesis of Sentences						
<b>Module:5</b>	Writing: Discourse	<b>4 hours</b>				
Instructions, Paragraph, Transcoding						
<b>Total Lecture hours</b>					<b>30 hours</b>	
<b>Text Book(s)</b>						
1.	Redston, Chris, Theresa Clementson, and Gillie Cunningham. <i>Face2face Upper Intermediate Student's Book</i> . 2013, Cambridge University Press.					
<b>Reference Books</b>						
1.	Chris Juzwiak <i>.Stepping Stones: A guided approach to writing sentences and Paragraphs (Second Edition)</i> , 2012, Library of Congress.					
2.	Clifford A Whitcomb & Leslie E Whitcomb, <i>Effective Interpersonal and Team Communication Skills for Engineers</i> , 2013, John Wiley & Sons, Inc., Hoboken: New Jersey.					
3.	ArunPatil, Henk Eijkman & Ena Bhattacharya, <i>New Media Communication Skills for Engineers and IT Professionals</i> , 2012, IGI Global, Hershey PA.					
4.	Judi Brownell, <i>Listening: Attitudes, Principles and Skills</i> , 2016, 5 <sup>th</sup> Edition, Routledge: USA					
5.	John Langan, <i>Ten Steps to Improving College Reading Skills</i> , 2014, 6 <sup>th</sup> Edition, Townsend Press: USA					
6.	Redston, Chris, Theresa Clementson, and Gillie Cunningham. <i>Face2face Upper Intermediate Teacher's Book</i> . 2013, Cambridge University Press.					
<b>Mode of Evaluation:</b> CAT / Assignment / Quiz / FAT / Project / Seminar						
<b>List of Challenging Experiments (Indicative)</b>						
1.	Familiarizing students to adjectives through brainstorming adjectives with all letters of the English alphabet and asking them to add an adjective that starts with the first letter of their name as a prefix.					<b>2 hours</b>

2.	Making students identify their peer who lack Pace, Clarity and Volume during presentation and respond using Symbols.	<b>4 hours</b>
3.	Using Picture as a tool to enhance learners speaking and writing skills	<b>2 hours</b>
4.	Using Music and Songs as tools to enhance pronunciation in the target language / Activities through VIT Community Radio	<b>2 hours</b>
5.	Making students upload their Self- introduction videos in Vimeo.com	<b>4 hours</b>
6.	Brainstorming idiomatic expressions and making them use those in to their writings and day to day conversation	<b>4 hours</b>
7.	Making students Narrate events by adding more descriptive adjectives and add flavor to their language / Activities through VIT Community Radio	<b>4 hours</b>
8.	Identifying the root cause of stage fear in learners and providing remedies to make their presentation better	<b>4 hours</b>
9.	Identifying common Spelling & Sentence errors in Letter Writing and other day to day conversations	<b>2 hours</b>
10.	Discussing FAQ's in interviews with answers so that the learner gets a better insight in to interviews / Activities through VIT Community Radio	<b>2 hours</b>
<b>Total Laboratory Hours</b>		<b>30 hours</b>
<b>Mode of evaluation:</b> Online Quizzes, Presentation, Role play, Group Discussions, Assignments, Mini Project		
<b>Recommended by Board of Studies</b>		22-07-2017
<b>Approved by Academic Council</b>		No. 46      Date      24-8-2017

ENG5002	Professional and Communication Skills	L	T	P	J	C
		0	0	2	0	1
<b>Pre-requisite</b>	<b>ENG5001</b>	<b>Syllabus version</b>				
		1.1				
<b>Course Objectives:</b>						
1. To enable students to develop effective Language and Communication Skills 2. To enhance students' Personal and Professional skills 3. To equip the students to create an active digital footprint						
<b>Expected Course Outcome:</b>						
1. Improve inter-personal communication skills 2. Develop problem solving and negotiation skills 3. Learn the styles and mechanics of writing research reports 4. Cultivate better public speaking and presentation skills 5. Apply the acquired skills and excel in a professional environment						
<b>Module:1</b>	<b>Personal Interaction</b>	<b>2hours</b>				
Introducing Oneself- one's career goals Activity: SWOT Analysis						
<b>Module:2</b>	<b>Interpersonal Interaction</b>	<b>2 hours</b>				
Interpersonal Communication with the team leader and colleagues at the workplace Activity: Role Plays/Mime/Skit						
<b>Module:3</b>	<b>Social Interaction</b>	<b>2 hours</b>				
Use of Social Media, Social Networking, gender challenges Activity: Creating LinkedIn profile, blogs						
<b>Module:4</b>	<b>Résumé Writing</b>	<b>4 hours</b>				
Identifying job requirement and key skills Activity: Prepare an Electronic Résumé						
<b>Module:5</b>	<b>Interview Skills</b>	<b>4 hours</b>				
Placement/Job Interview, Group Discussions Activity: Mock Interview and mock group discussion						
<b>Module:6</b>	<b>Report Writing</b>	<b>4 hours</b>				
Language and Mechanics of Writing Activity: Writing a Report						
<b>Module:7</b>	<b>Study Skills: Note making</b>	<b>2hours</b>				
Summarizing the report Activity: Abstract, Executive Summary, Synopsis						
<b>Module:8</b>	<b>Interpreting skills</b>	<b>2 hours</b>				
Interpret data in tables and graphs Activity: Transcoding						
<b>Module:9</b>	<b>Presentation Skills</b>	<b>4 hours</b>				
Oral Presentation using Digital Tools Activity: Oral presentation on the given topic using appropriate non-verbal cues						
<b>Module:10</b>	<b>Problem Solving Skills</b>	<b>4 hours</b>				
Problem Solving & Conflict Resolution Activity: Case Analysis of a Challenging Scenario						
<b>Total Lecture hours</b>					<b>30 hours</b>	
<b>Text Book(s)</b>						
1.	Bhatnagar Nitin and Mamta Bhatnagar, <i>Communicative English For Engineers And Professionals</i> , 2010, Dorling Kindersley (India) Pvt. Ltd.					

<b>Reference Books</b>			
1.	Jon Kirkman and Christopher Turk, Effective Writing: Improving Scientific, Technical and Business Communication, 2015, Routledge		
2.	Diana Bairaktarova and Michele Eodice, Creative Ways of Knowing in Engineering, 2017, Springer International Publishing		
3.	Clifford A Whitcomb & Leslie E Whitcomb, Effective Interpersonal and Team Communication Skills for Engineers, 2013, John Wiley & Sons, Inc., Hoboken: New Jersey.		
4.	ArunPatil, Henk Eijkman &Ena Bhattacharya, New Media Communication Skills for Engineers and IT Professionals,2012, IGI Global, Hershey PA.		
<b>Mode of Evaluation:</b> CAT / Assignment / Quiz / FAT / Project / Seminar			
<b>List of Challenging Experiments (Indicative)</b>			
1.	SWOT Analysis – Focus specially on describing two strengths and two weaknesses		<b>2 hours</b>
2.	Role Plays/Mime/Skit -- Workplace Situations		<b>4 hours</b>
3.	Use of Social Media – Create a LinkedIn Profile and also write a page or two on areas of interest		<b>2 hours</b>
4.	Prepare an Electronic Résumé and upload the same in vimeo		<b>2 hours</b>
5.	Group discussion on latest topics		<b>4 hours</b>
6.	Report Writing – Real-time reports		<b>2 hours</b>
7.	Writing an Abstract, Executive Summary on short scientific or research articles		<b>4 hours</b>
8.	Transcoding – Interpret the given graph, chart or diagram		<b>2 hours</b>
9.	Oral presentation on the given topic using appropriate non-verbal cues		<b>4 hours</b>
10.	Problem Solving -- Case Analysis of a Challenging Scenario		<b>4 hours</b>
<b>Total Laboratory Hours</b>			<b>30 hours</b>
<b>Mode of evaluation:</b> Online Quizzes, Presentation, Role play, Group Discussions, Assignments, Mini Project			
<b>Recommended by Board of Studies</b>		22-07-2017	
<b>Approved by Academic Council</b>		No. 47	Date 05-10-2017

FRE5001	FRANCAIS FONCTIONNEL	L	T	P	J	C
		2	0	0	0	2
<b>Pre-requisite</b>	Nil	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
The course gives students the necessary background to: <ol style="list-style-type: none"> <li>1. Demonstrate competence in reading, writing, and speaking basic French, including knowledge of vocabulary (related to profession, emotions, food, workplace, sports/hobbies, classroom and family).</li> <li>2. Achieve proficiency in French culture oriented view point.</li> </ol>						
<b>Expected Course Outcome:</b>						
The students will be able to <ol style="list-style-type: none"> <li>1. Remember the daily life communicative situations via personal pronouns, emphatic pronouns, salutations, negations, interrogations etc.</li> <li>2. Create communicative skill effectively in French language via regular / irregular verbs.</li> <li>3. Demonstrate comprehension of the spoken / written language in translating simple sentences.</li> <li>4. Understand and demonstrate the comprehension of some particular new range of unseen written materials.</li> <li>5. Demonstrate a clear understanding of the French culture through the language studied.</li> </ol>						
<b>Module:1</b>	<b>Saluer, Se présenter, Etablir des contacts</b>	<b>3 hours</b>				
Les Salutations, Les nombres (1-100), Les jours de la semaine, Les mois de l'année, Les Pronoms Sujets, Les Pronoms Toniques, La conjugaison des verbes réguliers, La conjugaison des verbes irréguliers- avoir / être / aller / venir / faire etc.						
<b>Module:2</b>	<b>Présenter quelqu'un, Chercher un(e) correspondant(e), Demander des nouvelles d'une personne.</b>	<b>3 hours</b>				
La conjugaison des verbes Pronominaux, La Négation, L'interrogation avec ' <i>Est-ce que ou sans Est-ce que</i> '.						
<b>Module:3</b>	<b>Situer un objet ou un lieu, Poser des questions</b>	<b>4 hours</b>				
L'article (défini/ indéfini), Les prépositions (à/en/au/aux/sur/dans/avec etc.), L'article contracté, Les heures en français, La Nationalité du Pays, L'adjectif (La Couleur, l'adjectif possessif, l'adjectif démonstratif/ l'adjectif interrogatif (quel/quelles/quelle/quelles), L'accord des adjectifs avec le nom, L'interrogation avec Comment/ Combien / Où etc.,						
<b>Module:4</b>	<b>Faire des achats, Comprendre un texte court, Demander et indiquer le chemin.</b>	<b>6 hours</b>				
La traduction simple :(français-anglais / anglais –français)						
<b>Module:5</b>	<b>Trouver les questions, Répondre aux questions générales en français.</b>	<b>5 hours</b>				
L'article Partitif, Mettez les phrases aux pluriels, Faites une phrase avec les mots donnés, Exprimez les phrases données au Masculin ou Féminin, Associez les phrases.						
<b>Module:6</b>	<b>Comment écrire un passage</b>	<b>3 hours</b>				
<b>Décrivez :</b> La Famille /La Maison, /L'université /Les Loisirs/ La Vie quotidienne etc.						
<b>Module:7</b>	<b>Comment écrire un dialogue</b>	<b>4 hours</b>				
<b>Dialogue:</b> <ol style="list-style-type: none"> <li>a) Réserver un billet de train</li> <li>b) Entre deux amis qui se rencontrent au café</li> <li>c) Parmi les membres de la famille</li> <li>d) Entre le client et le médecin</li> </ol>						
<b>Module:8</b>	<b>Invited Talk: Native speakers</b>	<b>2 hours</b>				
					<b>Total Lecture hours</b>	<b>30 hours</b>

<b>Text Book(s)</b>			
1.	Echo-1, Méthode de français, J. Girardet, J. Pécheur, Publisher CLE International, Paris 2010.		
2.	Echo-1, Cahier d'exercices, J. Girardet, J. Pécheur, Publisher CLE International, Paris 2010.

<b>Course Objectives:</b>						
The course gives students the necessary background to: <ol style="list-style-type: none"> <li>1. Enable students to read and communicate in German in their day to day life</li> <li>2. Become industry-ready</li> <li>3. Make them understand the usage of grammar in the German Language.</li> </ol>						
<b>Expected Course Outcome:</b>						
The students will be able to <ol style="list-style-type: none"> <li>1. Create the basics of German language in their day to day life.</li> <li>2. Understand the conjugation of different forms of regular/irregular verbs.</li> <li>3. Understand the rule to identify the gender of the Nouns and apply articles appropriately.</li> <li>4. Apply the German language skill in writing corresponding letters, E-Mails etc.</li> <li>5. Create the talent of translating passages from English-German and vice versa and To frame simple dialogues based on given situations.</li> </ol>						
<b>Module:1</b>		<b>3 hours</b>				
Einleitung, Begrüßungsformen, Landeskunde, Alphabet, Personalpronomen, Verb Konjugation, Zahlen (1-100), W-fragen, Aussagesätze, Nomen – Singular und Plural						
<b>Lernziel:</b> Elementares Verständnis von Deutsch, Genus- Artikelwörter						
<b>Module:2</b>		<b>3 hours</b>				
Konjugation der Verben (regelmässig /unregelmässig) die Monate, die Wochentage, Hobbys, Berufe, Jahreszeiten, Artikel, Zahlen (Hundert bis eine Million), Ja-/Nein- Frage, Imperativ mit Sie						
<b>Lernziel :</b> Sätze schreiben, über Hobbys erzählen, über Berufe sprechen usw.						
<b>Module:3</b>		<b>4 hours</b>				
Possessivpronomen, Negation, Kasus- AkkusativundDativ (bestimmter, unbestimmter Artikel), trennbare verben, Modalverben, Adjektive, Uhrzeit, Präpositionen, Mahlzeiten, Lebensmittel, Getränke						
<b>Lernziel :</b> Sätze mit Modalverben, Verwendung von Artikel, über Länder und Sprachen sprechen, über eine Wohnung beschreiben.						
<b>Module:4</b>		<b>6 hours</b>				
Übersetzungen : (Deutsch – Englisch / Englisch – Deutsch)						
<b>Lernziel :</b> Grammatik – Wortschatz – Übung						
<b>Module:5</b>		<b>5 hours</b>				
Leseverständnis, Mindmap machen, Korrespondenz- Briefe, Postkarten, E-Mail						
<b>Lernziel :</b> Wortschatzbildung und aktiver Sprach gebrauch						
<b>Module:6</b>		<b>3 hours</b>				
<b>Aufsätze :</b> Meine Universität, Das Essen, mein Freund oder meine Freundin, meine Familie, ein Fest in Deutschland usw						

<b>Module:7</b>		<b>4 hours</b>
<b>Dialoge:</b> a) Gespräche mit Familienmitgliedern, Am Bahnhof, b) Gespräche beim Einkaufen ; in einem Supermarkt ; in einer Buchhandlung ; c) in einem Hotel - an der Rezeption ;ein Termin beim Arzt. d) Treffen im Cafe		
<b>Module:8</b>		<b>2 hours</b>
Guest Lectures/Native Speakers / Feinheiten der deutschen Sprache, Basisinformation über die deutschsprachigen Länder		
<b>Total Lecture hours:</b>		<b>30 hours</b>

		2.0				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>To develop the students' logical thinking skills</li> <li>To learn the strategies of solving quantitative ability problems</li> <li>To enrich the verbal ability of the students</li> <li>To enhance critical thinking and innovative skills</li> </ol>						
<b>Expected Course Outcome:</b>						
<ol style="list-style-type: none"> <li>Enabling students to use relevant aptitude and appropriate language to express themselves</li> <li>To communicate the message to the target audience clearly</li> </ol>						
<b>Module:1</b>	<b>Business Etiquette: Social and Cultural Etiquette and Writing Company Blogs and Internal Communications and Planning and Writing press release and meeting notes</b>	<b>9 hours</b>				
Value, Manners, Customs, Language, Tradition, Building a blog, Developing brand message, FAQs', Assessing Competition, Open and objective Communication, Two way dialogue, Understanding the audience, Identifying, Gathering Information,. Analysis, Determining, Selecting plan, Progress check, Types of planning, Write a short, catchy headline, Get to the Point –summarize your subject in the first paragraph., Body – Make it relevant to your audience,						
<b>Module:2</b>	<b>Study skills – Time management skills</b>	<b>3 hours</b>				
Prioritization, Procrastination, Scheduling, Multitasking, Monitoring, Working under pressure and adhering to deadlines						
<b>Module:3</b>	<b>Presentation skills – Preparing presentation and Organizing materials and Maintaining and preparing visual aids and Dealing with questions</b>	<b>7 hours</b>				
10 Tips to prepare PowerPoint presentation, Outlining the content, Passing the Elevator Test, Blue sky thinking, Introduction , body and conclusion, Use of Font, Use of Color, Strategic presentation, Importance and types of visual aids, Animation to captivate your audience, Design of posters, Setting out the ground rules, Dealing with interruptions, Staying in control of the questions, Handling difficult questions						
<b>Module:4</b>	<b>Quantitative Ability -L1 – Number properties and Averages and Progressions and Percentages and Ratios</b>	<b>11 hours</b>				
Number of factors, Factorials, Remainder Theorem, Unit digit position, Tens digit position, Averages, Weighted Average, Arithmetic Progression, Geometric Progression, Harmonic Progression, Increase & Decrease or successive increase, Types of ratios and proportions						
<b>Module:5</b>	<b>Reasoning Ability-L1 – Analytical Reasoning</b>	<b>8 hours</b>				
Data Arrangement(Linear and circular & Cross Variable Relationship), Blood Relations, Ordering/ranking/grouping, Puzzle test, Selection Decision table						
<b>Module:6</b>	<b>Verbal Ability-L1 – Vocabulary Building</b>	<b>7 hours</b>				
Synonyms & Antonyms, One word substitutes, Word Pairs, Spellings, Idioms, Sentence completion, Analogies						
<b>Total Lecture hours</b>					<b>45 hours</b>	
<b>Reference Books</b>

STS5002	Preparing for Industry	L	T	P	J	C
		3	0	0	0	1
<b>Pre-requisite</b>		<b>Syllabus version</b>				
		2.0				
<b>Course Objectives:</b>						
1.To develop the students’ logical thinking skills 2.To learn the strategies of solving quantitative ability problems 3.To enrich the verbal ability of the students 4.To enhance critical thinking and innovative skills						
<b>Expected Course Outcome:</b>						
1. Enabling students to simplify, evaluate, analyze and use functions and expressions to simulate real situations to be industry ready.						
<b>Module:1</b>	<b>Interview skills – Types of interview and Techniques to face remote interviews and Mock Interview</b>	<b>3 hours</b>				
Structured and unstructured interview orientation, Closed questions and hypothetical questions, Interviewers’ perspective, Questions to ask/not ask during an interview, Video interview, Recorded feedback, Phone interview preparation, Tips to customize preparation for personal interview, Practice rounds						
<b>Module:2</b>	<b>Resume skills – Resume Template and Use of power verbs and Types of resume and Customizing resume</b>	<b>2 hours</b>				
Structure of a standard resume, Content, color, font, Introduction to Power verbs and Write up, Quiz on types of resume, Frequent mistakes in customizing resume, Layout - Understanding different company's requirement, Digitizing career portfolio						
<b>Module:3</b>	<b>Emotional Intelligence - L1 – Transactional Analysis and Brain storming and Psychometric Analysis and Rebus Puzzles/Problem Solving</b>	<b>12 hours</b>				
Introduction, Contracting, ego states, Life positions, Individual Brainstorming, Group Brainstorming, Stepladder Technique, Brain writing, Crawford's Slip writing approach, Reverse brainstorming, Star bursting, Charlette procedure, Round robin brainstorming, Skill Test, Personality Test, More than one answer, Unique ways						
<b>Module:4</b>	<b>Quantitative Ability-L3 – Permutation-Combinations and Probability and Geometry and mensuration and Trigonometry and Logarithms and Functions and Quadratic Equations and Set Theory</b>	<b>14 hours</b>				
Counting, Grouping, Linear Arrangement, Circular Arrangements, Conditional Probability, Independent and Dependent Events, Properties of Polygon, 2D & 3D Figures, Area & Volumes, Heights and distances, Simple trigonometric functions, Introduction to logarithms, Basic rules of logarithms, Introduction to functions, Basic rules of functions, Understanding Quadratic Equations, Rules & probabilities of Quadratic Equations, Basic concepts of Venn Diagram						
<b>Module:5</b>	<b>Reasoning ability-L3 – Logical reasoning and Data Analysis and Interpretation</b>	<b>7 hours</b>				
Syllogisms, Binary logic, Sequential output tracing, Crypto arithmetic, Data Sufficiency, Data interpretation-Advanced, Interpretation tables, pie charts & bar chats						
<b>Module:6</b>	<b>Verbal Ability-L3 – Comprehension and Logic</b>	<b>7 hours</b>				
Reading comprehension, Para Jumbles, Critical Reasoning (a) Premise and Conclusion, (b) Assumption & Inference, (c) Strengthening & Weakening an Argument						

<b>Total Lecture hours</b>		<b>45 hours</b>

<b>SET5001</b>	<b>SCIENCE, ENGINEERING AND TECHNOLOGY PROJECT- I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
						<b>2</b>
<b>Pre-requisite</b>		<b>Syllabus Version</b>				
<b>Anti-requisite</b>		1.0				
<b>Course Objectives:</b>						
1. To provide opportunity to involve in research related to science / engineering 2. To inculcate research culture 3. To enhance the rational and innovative thinking capabilities						
<b>Expected Course Outcome:</b>						
On completion of this course, the student should be able to:  1. Identify problems that have relevance to societal / industrial needs 2. Exhibit independent thinking and analysis skills 3. Demonstrate the application of relevant science / engineering principles						
<b>Modalities / Requirements</b>						
1. Individual or group projects can be taken up 2. Involve in literature survey in the chosen field 3. Use Science/Engineering principles to solve identified issues 4. Adopt relevant and well-defined / innovative methodologies to fulfill the specified objective 5. Submission of scientific report in a specified format (after plagiarism check)						
<b>Student Assessment :</b> Periodical reviews, oral/poster presentation						
<b>Recommended by Board of Studies</b>	17-08-2017					
<b>Approved by Academic Council</b>	No. 47	Date	05-10-2017

<b>CLE6099</b>	<b>Master's Thesis</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>16</b>
<b>Pre-requisite</b>	<b>As per the academic regulations</b>	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field and also to give research orientation						
<b>Expected Course Outcome:</b>						
At the end of the course the student will be able to						
<ol style="list-style-type: none"> <li>1. Formulate specific problem statements for ill-defined real life problems with reasonable assumptions and constraints.</li> <li>2. Perform literature search and / or patent search in the area of interest.</li> <li>3. Conduct experiments / Design and Analysis / solution iterations and document the results.</li> <li>4. Perform error analysis / benchmarking / costing</li> <li>5. Synthesise the results and arrive at scientific conclusions / products / solution</li> <li>6. Document the results in the form of technical report / presentation</li> </ol>						
<b>Contents</b>						
<ol style="list-style-type: none"> <li>1. Capstone Project may be a theoretical analysis, modeling &amp; simulation, experimentation &amp; analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities.</li> <li>2. Project can be for two semesters based on the completion of required number of credits as per the academic regulations.</li> <li>3. Should be individual work.</li> <li>4. Carried out inside or outside the university, in any relevant industry or research institution.</li> <li>5. Publications in the peer reviewed journals / International Conferences will be an added advantage</li> </ol>						
<b>Mode of Evaluation:</b> Periodic reviews, Presentation, Final oral viva, Poster submission

<b>CLE5017</b>	<b>CONSTRUCTION PRACTICES AND EQUIPMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>2</b>	<b>0</b>	<b>0</b>	<b>4</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To understand the various techniques to be implemented in substructure construction</li> <li>2. To know the launching of girders, material handling and erection of components in super structure construction.</li> <li>3. To study the various types of roads; its construction procedure and equipment employed in road construction.</li> <li>4. To attain the knowledge in harbour, dam, river work and pipeline construction.</li> <li>5. To know the various types of equipment and its usage in different types of constructions.</li> <li>6. To obtain the knowledge of equipment management, cost control in construction.</li> </ol>						
<b>Expected Course Outcome:</b>						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> <li>1. Identify the suitable techniques to construct the structure based on site condition</li> <li>2. Prepare the work schedule for any type of super structure construction.</li> <li>3. Identify the techniques to implement in construction of Embankment, Retaining wall, breast wall in hill road.</li> <li>4. Identify the suitable method and equipment to construct a Road, Dams, Harbour, River work and pipelines.</li> <li>5. Prepare a suitable plan for erection of new plants like Batching and mixing plant, Ready mix concrete plant at site.</li> <li>6. Manage and maintain the equipment and its cost control.</li> </ol>						
<b>Module: 1</b>	<b>Sub Structure Construction</b>	<b>4 hours</b>				
Techniques of Box jacking – Pipe Jacking -under water construction of diaphragm walls and basement-Tunneling techniques – Piling techniques -Dewatering and stand by Plant equipment for underground open excavation.						
<b>Module: 2</b>	<b>Superstructure Construction</b>	<b>4 hours</b>				
Launching girders, bridge decks, offshore platforms – Material handling - erecting lightweight components on tall structures - Erection of articulated structures - Fabrication and erection of steel trusses and frames.						
<b>Module: 3</b>	<b>Highway Construction Practice</b>	<b>4 hours</b>				
Embankment Construction - Ground improvement techniques, Retaining and Breast walls on hill road. Bituminous Constructions- Concrete road construction: Test - Construction equipments - Method of construction of joints in concrete pavements - IRC specifications.						
<b>Module: 4</b>	<b>Dams and Harbour Construction Practice</b>	<b>4 hours</b>				
Construction Methods and Equipment for Dams, Harbours, River works and Pipelines.						
<b>Module: 5</b>	<b>Earthwork Equipment</b>	<b>4 hours</b>				
Fundamentals of Earthwork Operations - Earth Moving operations-Types of Earthwork Equipment - Tractors, Motor Graders, Scrapers, Front end Loaders, Earth Movers – capacity calculations.						
<b>Module: 6</b>	<b>Forklifts and Screening Equipment</b>	<b>4 hours</b>				
Forklifts and related equipment - Portable Material Bins - Conveyors - equipment used in demolition – Chain Pulley Blocks. Crushers – Feeders - Screening Equipment - Batching and Mixing						

Equipment – Hauling equipment - Pouring and Pumping Equipment – Ready mixed concrete carriers			
<b>Module: 7</b>	<b>Equipment Management</b>	<b>4 hours</b>	
Factors affecting selection of equipment and methods –Planning - Equipment Management in Projects - Maintenance Management – Replacement - Cost Control of Equipment – Depreciation Analysis, Methods of calculation of depreciation- Safety Management.			
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>	
<b>Total Lecture hours</b>		<b>30 hours</b>	
<b>Sample list of J component Projects</b>		<b>60 hours</b>	
<ol style="list-style-type: none"> <li>1. Levels in the Construction and selection of equipment.</li> <li>2. Detailed Equipment management schedule for construction.</li> <li>3. Detailed report on selection of methods used in above ground level construction.</li> <li>4. Detailed report on selection of methods used in under water construction.</li> <li>5. Detailed Equipment management schedule for special construction.</li> </ol>

		<b>2</b>	<b>0</b>	<b>0</b>	<b>4</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
<b>1.0</b>						
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To understand the applications and properties of various building materials</li> <li>2. To know the various types of metals and alloys</li> <li>3. To understand the potential applications of architectural materials</li> <li>4. To obtain the knowledge about polymer materials and smart materials</li> <li>5. To know the various chemical admixtures and special concrete</li> </ol>						
<b>Expected Course Outcome:</b>						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> <li>1. Compare the properties of most common and advanced building materials</li> <li>2. Explain the role of metals and alloys in construction industry</li> <li>3. Identify the required architectural materials for various buildings</li> <li>4. Explain the role of polymers in construction industry</li> <li>5. Outline various smart materials suitable for structures</li> <li>6. Describe various properties and applications of chemical and mineral admixtures</li> <li>7. Explain the properties and applications of special concrete</li> </ol>						
<b>Module: 1</b>	<b>Building Materials</b>	<b>4 hours</b>				
Cement- types - properties and testing – Aggregate – types - properties and Testing, Reinforcement – Types - Manufacturing Process - Properties – Types of Coatings & Coatings to reinforcement.						
<b>Module: 2</b>	<b>Metals</b>	<b>4 hours</b>				
Metals and Special Alloys of Steel - Water Jet Cut Stainless Steel, Mill Slab Steel, Tension Rods Assemblies and Cast Iron - Heat Treatment – Tendons - GI sheets, tubes and lightweight roofing materials - Aluminium and its products						
<b>Module: 3</b>	<b>Architectural Materials</b>	<b>4 hours</b>				
Wood and Wood Product – Glass - Floor Finishes – Paints – Tiles - Thermal insulation and acoustic absorption materials - decorative panels and laminates - architectural glass and ceramics - ferrocement.						
<b>Module: 4</b>	<b>Polymers</b>	<b>4 hours</b>				
Polymers- Structural Plastics and Composites- Polymer Membranes- Coatings-Adhesives, Non-Weathering Materials-Flooring and Facade Materials- Glazed Brick - Photo Catalytic Cement - Acid Etched Copper and Composite Fibres						
<b>Module: 5</b>	<b>Smart Materials</b>	<b>4 hours</b>				
Neoprene, Bridge pads, thermocole, Smart and Intelligent Materials – Special features –Case studies showing the applications of smart and Intelligent Materials. Petroleum products, Fibre Reinforced Polymers, Bituminous Materials						
<b>Module: 6</b>	<b>Chemical and Mineral Admixtures</b>	<b>4 hours</b>				
Types and properties of Chemical Admixtures - Water Proofing Compounds– sealants, engineering grouts, various types of finishes & treatments , Fly ash – silica fume – GGBFS - metakaolin - rice husk ash - properties and its application in concrete under special environment.						

<b>Module: 7</b>	<b>Special Concrete</b>	<b>4 hours</b>
Self-Compacting Concrete – Lightweight concrete – Self dynamic concrete – Self Healing Concrete – Nanotube concrete – High density concrete – High Performance Concrete – Ready mix Concrete – Geopolymer Concrete.		
<b>Module: 8</b>	<b>Contemporary issues</b>	<b>2 hours</b>
<b>Industrial Expert Lecture</b>		
<b>Total Lecture hours</b>		<b>30 hours</b>
<b>List of Sample J projects</b>		<b>60 hours</b>
Experimental study on strength and durability of special concretes Study on properties of building and composite materials Applications of smart and intelligent materials

<b>CLE5019</b>	<b>CONSTRUCTION PLANNING AND SCHEDULING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>2</b>	<b>0</b>	<b>0</b>	<b>4</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To understand the importance of construction planning and organizational cultures and their impact on a project.</li> <li>2. To know the relationship between strategic plans and projects and also understand the types of project risks in an organization.</li> <li>3. To understand the importance of a complete and accurate WBS from a planning and executing point of view.</li> <li>4. To compute critical path, slack and floats for a given network diagram.</li> <li>5. To obtain the knowledge of advanced scheduling techniques and to be familiar with computerized scheduling both its limitations and advantages.</li> <li>6. To prepare resource scheduling such as material, equipment and manpower requirements to execute the project.</li> <li>7. To work out the costs associated with different construction projects.</li> </ol>						
<b>Expected Course Outcome:</b>						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> <li>1. Understand the importance of construction planning and organizational cultures.</li> <li>2. Discuss the relationship between strategic planning and project planning.</li> <li>3. Construct WBS and compute critical path, slack and floats for a given network diagram.</li> <li>4. Describe the advanced scheduling techniques</li> <li>5. Prepare various types of Project Information using Database Management Systems.</li> <li>6. Create scheduling for material, equipment and manpower requirements to execute the project.</li> <li>7. Estimate costs associated with different construction projects.</li> </ol>						
<b>Module: 1</b>	<b>Planning</b>	<b>4 hours</b>				
Construction Planning - Organizing, Staffing, directing, and controlling – Factors influence supply and demand of human resources – Role of HR manager – Personnel Principles -case studies						
<b>Module: 2</b>	<b>Organizing</b>	<b>4 hours</b>				
Requirement of Organization – Organization structure – Organization charts – Staffing Plan - Development and Operation of human resources						
<b>Module: 3</b>	<b>Scheduling Techniques</b>	<b>4 hours</b>				
Work Breakdown Structure (WBS) -Time Management and Scheduling -Bar chart and Gantt chart - Network methods - Network diagram - Critical Path Method -Calculation critical path , Floats/slacks - PERT – Three time estimates						
<b>Module: 4</b>	<b>Resource Techniques</b>	<b>4 hours</b>				
Precedence Diagram Method (PDM), Project monitoring - Updating - Target Schedule, Optimum cost and time, Scheduling with uncertain durations-Calculations for Monte Carlo Schedule Simulations-Crashing and Time-Cost Tradeoff						
<b>Module: 5</b>	<b>Project Information</b>	<b>4 hours</b>				
Types of Project Information - Accuracy and Use of Information -Computerized Organization and Use of Information - Other Conceptual Models of Databases - Centralized - Database Management Systems - Databases and Applications Programs –Information - Transfer and Flow.						
<b>Module: 6</b>	<b>Labour and Material Utilization</b>	<b>4 hours</b>				

Labour requirements, labour productivity, Equipment, Material Management, Inventory Control, Economic order quantity, EOQ for resource limitation, Resource scheduling - leveling and allocation.			
<b>Module: 7</b>	<b>Cost Estimation</b>	<b>4 hours</b>	
Costs Associated with Constructed Facilities - Construction Cost Estimates - Historical Cost Data - Cost Indices - Applications of Cost Indices to Estimating - Estimate based on Engineer's List of Quantities - Estimation of Operating Costs.			
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>	
<b>Total Lecture hours</b>		<b>30 hours</b>	
<b>Sample list of projects for J components</b>		<b>60 hours</b>	
<ul style="list-style-type: none"><li>• Creating a work breakdown structure to execute a project using software</li><li>• Prepare ABC analysis for inventory control used in construction</li><li>• Preparation of detailed cost estimation of a project</li></ul>

CLE5020	CONTRACT AND ADMINISTRATION PLANNING	L	T	P	J	C
		3	0	0	0	3
<b>Pre-requisite</b>	NIL	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To make students who take this course be able to design sound contracts by training to interpret legal provisions and effectively administer and fulfill the requirements of a contract</li> <li>2. To be able to effectively administer contract and identify tools available for contract preparation and administration</li> <li>3. To identify good practice important stages of contract and wordings in contract</li> <li>4. Understand jurisprudence to effectively administer contracts and a construction organization</li> <li>5. To interpret the laws like Labour Laws, Tax laws and requirements and guidelines of other national and international legal regulatory bodies</li> </ol>						
<b>Expected Course Outcome:</b>						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> <li>1. Explain the various types of construction contracts and their legal aspects.</li> <li>2. Appreciate the merits and demerits of a contract form and choose the most appropriate form ensuring sufficient safeguards are agreed upon to protect the interest of the party represented from Torts, LD etc.</li> <li>3. Identify and develop the stages of a tender; decide the work flow and be able to define requirements of each relevant stage</li> <li>4. Prevent failure of a contract; Understand legal recourse when a contract fails irreconcilably</li> <li>5. Relate legal aspects of a contract</li> <li>6. Gain knowledge in tax laws</li> <li>7. Understand and apply labour regulations to construction industry</li> <li>8. Be aware of practice of industry in executing contracts and</li> </ol>						
<b>Module: 1</b>	<b>Introduction</b>	<b>6 hours</b>				
Definition of Contract Legal issues in contract – Standard forms of contracts- General and special conditions of contracts- Contract pricing by the client, project management consultants and the contractor, Contract correspondence and contract closure.						
<b>Module: 2</b>	<b>Construction Contracts</b>	<b>6 hours</b>				
Types of contracts, Documents forming a contract, General conditions of Indian contracts - International contracts - Contract administration, Law of Torts - Interpretation of contract in case of inconsistency including case study.						
<b>Module: 3</b>	<b>Tenders</b>	<b>9 hours</b>				
Prequalification – Bidding – Accepting – Evaluation of Tender from Technical, Contractual and Commercial Points of View – Contract Formation and Interpretation – Potential Contractual Problems - World Bank Procedures and Guidelines – Tamilnadu Transparency in Tenders Act.						
<b>Module: 4</b>	<b>Arbitration</b>	<b>5 hours</b>				
Comparison of Actions and Laws – Agreements – Appointment of Arbitrators – Conditions of Arbitration – Arbitration Tribunals - Powers and Duties of Arbitrator – Enforcement of Award – Arbitration and Conciliation Act 1996 - Arbitration case study.						
<b>Module: 5</b>	<b>Legal Requirements</b>	<b>5 hours</b>				
Insurance and Bonding – Types of Bonds - Laws Governing Sale, Purchase and Use of Urban and Rural Land – Land Revenue Codes- Claims and disputes - Dispute resolution techniques.						

<b>Module: 6</b>	<b>Tax Laws</b>	<b>6 hours</b>	
Income Tax, Sales Tax, Excise and Custom Duties and their Influence on Construction Costs – Legal Requirements for Planning – Property Law – Agency Law – Local Government Laws for Approval – Statutory Regulations			
<b>Module: 7</b>	<b>Labour Regulations</b>	<b>6 hours</b>	
Social Security – Welfare Legislation – Laws relating to Wages, Bonus and Industrial Disputes – Workmen’s Compensation Act 1923 – Indian Factory Act 1948 – Tamil Nadu Factory Rules 1950 – Child Labour (Prohibition and Regulation) Act, 1986 - Other Labour Laws and Regulations.			
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>	
<b>Total Lecture hours</b>			<b>45 hours</b>
<b>Text Book(s)</b>

<b>CLE5021</b>	<b>CONSTRUCTION ECONOMICS AND FINANCE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To understand the Economics in civil engineering</li> <li>2. To understand concept of alternatives for decision making</li> <li>3. To analyse financial returns</li> <li>4. To evaluate the value added tax</li> <li>5. To understand the concept financial management, construction costing and financial statement analysis</li> </ol>						
<b>Expected Course Outcome:</b>						
<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> <li>1. Understand the Economics in civil engineering</li> <li>2. Understand concept of alternatives for decision making</li> <li>3. Analyse financial returns</li> <li>4. Evaluate the value added tax</li> <li>5. Understand the concept financial management, construction costing and financial statement analysis</li> </ol>						
<b>Module: 1</b>	<b>Economics</b>	<b>6 hours</b>				
Role of Civil Engineering in Industrial Development - Support matters of Economy as related top Engineering- Market demand and supply - Quality control and Quality Production -Audit in economic law of returns, governing production.						
<b>Module: 2</b>	<b>Equivalence Factors</b>	<b>9 hours</b>				
Time value of money, Quantifying alternatives for decision making, Cash flow diagrams, Equivalency - Single payment in the future - Present payment compared to uniform series payments - Future payment compared to uniform series payments - Arithmetic gradient, Geometric gradient.						
<b>Module: 3</b>	<b>Financial Returns Analysis</b>	<b>5 hours</b>				
Comparison of alternatives: Present, future and annual worth method of comparing alternatives, Rate of return, Incremental rate of return, Break-even comparisons, Capitalized cost analysis, Benefit-cost analysis.						
<b>Module: 4</b>	<b>Evaluating Alternative Investments</b>	<b>5 hours</b>				
Real Estate - Investment Property, Equipment Replace Analysis, Depreciation – Tax before and after depreciation – Value Added Tax (VAT) – Inflation.						
<b>Module: 5</b>	<b>Financial Management</b>	<b>6 hours</b>				
Financial statements – Profit and loss, Balance sheets, Financial ratios, Working capital management, Inventory valuation, Mortgage Financing - International financial management-foreign currency management.						
<b>Module: 6</b>	<b>Construction Costing</b>	<b>6 hours</b>				
Cost estimating: Types of Estimates, Approximate estimates – Unit estimate, Factor estimate, Cost indexes. Fixed contract Pricing- Cost plus pricing- Escalation clause- Construction cost control, Personnel costs, Equipment costs, Job in directs and markup.						
<b>Module: 7</b>	<b>Financial Statement Analysis</b>	<b>6 hours</b>				
Balance sheet and Profit and Loss accounts – ratios analysis, Fund flow statement, Cash flow						

statement, Working Capital Management, Financial Control - Management accounting.			
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>	
		<b>Total Lecture hours</b>	<b>45 hours</b>
<b>Text Book(s)</b>

<b>CLE5022</b>	<b>SUPPLY CHAIN MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>2</b>	<b>2</b>	<b>2</b>	<b>0</b>	<b>4</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
<b>1.0</b>						
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To know and Master the fundamental concepts associated with Supply Chain Management and align with vision of the organization from the perspective of built environment and infrastructure development</li> <li>2. To analyse the decision chain process in a supply chain and evolve strategies to design effective supply chains based on recognized supply chain frameworks</li> <li>3. To critically evaluate designs for techno-commercial feasibility focusing on sustainability and being sensitive to socio – cultural impacts</li> <li>4. To build competence in management of vendors and sub-vendors to satisfy end requirements</li> <li>5. To study market scenario too evolve pricing strategy and improve competitiveness of the business</li> <li>6. To gain insight into E-Commerce and ERP2.0 concepts to increase efficiency of the supply chain</li> </ol>						
<b>Expected Course Outcome:</b>						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> <li>1. Connect recognized concepts of Supply Chain Management</li> <li>2. Design Supply chain networks using recognized frameworks</li> <li>3. Identify bottle necks in a supply chain.</li> <li>4. Design cost effective and technical feasible Supply chains that are sustainable and is socially responsible</li> <li>5. Calculate competitive prices for products delivered and add value to every aspect of the supply chain</li> <li>6. Effectively be able to use ERP and other modern digital tools that industry uses</li> </ol>						
<b>Module: 1</b>	<b>Introduction</b>	<b>4 hours</b>				
Supply chain stages and decision phases process view of a supply chain- Supply chain flows- Examples - Competitive and supply chain strategies -supply chain performance - Framework for structuring drivers - Obstacles to achieving fit - Case discussions.						
<b>Module: 2</b>	<b>Designing</b>	<b>4 hours</b>				
Distribution Networking - Role, Design, Supply Chain Network - Role, Factors, Framework for Design Decisions - Models for facility location and capacity allocation -Discounted cash flow analysis - Evaluating network design -Decision trees.						
<b>Module: 3</b>	<b>Sourcing</b>	<b>4 hours</b>				
Role of sourcing, supplier – scoring and assessment, selection and contracts, Design collaboration, Case Studies.						
<b>Module: 4</b>	<b>Transportation</b>	<b>4 hours</b>				
Role of transportation - Factors affecting transportation decisions - Modes of transportation and their performance characteristics - Designing transportation network - Trade-off in transportation design. Routing and scheduling in transportation - International transportation - Analytical problems.						
<b>Module: 5</b>	<b>Pricing</b>	<b>4 hours</b>				
Role Revenue Management in the supply chain, Revenue management for: Multiple customer						

segments, perishable assets, seasonal demand, bulk and spot contracts.			
<b>Module: 6</b>	<b>Coordination and Technology</b>		<b>4 hours</b>
Co-ordination in a supply chain: Bullwhip effect - Obstacles to coordination - Managerial levers to achieve co-ordination - Building strategic partnerships - Supply Chain IT framework - The role of E-business in a supply chain - The E-business framework - E-business in practice - Case discussion.			
<b>Module: 7</b>	<b>Emerging Concepts</b>		<b>4 hours</b>
Global Logistics -Reverse Logistics - Reasons, Activities, Role - Ware house Management-Components, applications, implementation - Lean supply Chains-Sustainable supply Chains			
<b>Module: 8</b>	<b>Contemporary issues</b>		<b>2 hours</b>
<b>Total Lecture hours</b>			<b>30 hours</b>
<b>Tutorial</b>			<b>30 hours</b>
Minimum of three problems to be worked out by students in every tutorial class.			
<b>Laboratory Exercises</b>			
Creating a new project			<b>6 hours</b>
Creating a Work break down structure			<b>6 hours</b>
Types of Resources			<b>6 hours</b>
Activity creating and Resources allocation			<b>6 hours</b>
Scheduling and report preparation, Working with Primavera			<b>6 hours</b>
<b>Total</b>			<b>30 hours</b>
<b>Text Book(s)</b>

CLE5023	COMPUTER APPLICATION IN INFRASTRUCTURE MANAGEMENT	L	T	P	J	C
		1	0	2	4	3
Pre-requisite	CLE 5022 Supply Chain Management	Syllabus version				
		1.0				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To understand the management roles and recent developments to optimize solutions.</li> <li>2. To know various computer applications in construction management.</li> <li>3. To obtain the knowledge on modern technology in construction site and its management.</li> </ol>						
<b>Expected Course Outcome:</b>						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> <li>1. Connect digital tools to construction practice.</li> <li>2. Apply techniques to optimize solutions.</li> <li>3. Describe and model list of items of work and bill of quantities.</li> <li>4. Relate technology through computer program in construction.</li> <li>5. Design and construct industrial applications through automation.</li> <li>6. Manage and apply linear project construction like roads.</li> <li>7. Work on integrated solutions.</li> <li>8. Produce models with optimized solutions in construction framework.</li> <li>9. Create models with integrated automation techniques.</li> </ol>						
<b>Module: 1</b>	<b>Introduction</b>	<b>2 hours</b>				
Overview of IT Applications in Construction – Construction process – Computerization in Construction – Computer aided Cost Estimation – Developing application with database software.						
<b>Module: 2</b>	<b>Optimization Techniques</b>	<b>2 hours</b>				
Linear, Dynamic and Integer Programming - Branch and Bound Techniques – Application to Production Scheduling, Equipment Replacement, Material Transportation and Work Assignment Problems – Software applications						
<b>Module: 3</b>	<b>Inventory Models</b>	<b>2 hours</b>				
Deterministic and Probabilistic Inventory Models - Software applications.						
<b>Module: 4</b>	<b>Computer Application</b>	<b>2 hours</b>				
Advanced planning and scheduling concepts – Computer applications – Case study – Adoption 3D Printing in construction.						
<b>Module: 5</b>	<b>Automation Techniques</b>	<b>2 hours</b>				
Introduction – Automation techniques in Surveying, Design and Construction – Automation in Road, Tunnel and Bridge Construction.						
<b>Module: 6</b>	<b>Application of software in Linear Project</b>	<b>2 hours</b>				
Introduction – Project – WBS – Activity – Relationship - Scheduling – Constrains – Schedule data – Resources – Role – Optimizing Project Plan – Execution and Control – Performance						
<b>Module: 7</b>	<b>Building Information Modeling</b>	<b>2 hours</b>				
Introduction – Parametric modeling – Visualisation – Completion of building modeling – 4D simulation using Navis works – Navigation and Clash detection.						
<b>Module: 8</b>	<b>Contemporary issues</b>	<b>1 hour</b>				
Industrial Expert Lecture						
<b>Total Lecture hours</b>					<b>15 hours</b>	

<b>Laboratory Exercises</b>			
Creating a new project			<b>5 hours</b>
Creating the Work break down structure			<b>5 hours</b>
Resources			<b>5 hours</b>
Activity creating and Resources allocation			<b>5 hours</b>
Scheduling and report preparation			<b>5 hours</b>
Working with BIM			<b>5 hours</b>
<b>Total</b>			<b>30 hours</b>
<b>Sample list of projects for J components</b>			<b>60 hours</b>
1. Linear Progress management for road, railway and tunnel projects 2. Create a WBS, Baseline, and Compare with planned and actual data 3. Prepare Time – Distance diagram and Gantt chart for linear projects			
<b>Text Book(s)</b>			
1.	Vinayagam P., VimalaA., (2017), “Planning and Managing Projects with PRIMAVERA (P6) Project Planner” I K International Publishing, New Delhi		
2.	Sham Tickoo (2017), Autodesk Navisworks 2017, BPB Publications

MGT6001	ORGANIZATIONAL BEHAVIOUR	L	T	P	J	C
		2	0	0	4	3
<b>Pre-requisite</b>	NIL	<b>Syllabus version</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To study about the Organizational Behavior and its importance in construction</li> <li>2. To develop the conceptual understanding on organizational behavior and theories of group formations</li> <li>3. To get a thorough knowledge about organizational development and effectiveness in construction</li> <li>4. To identify motivation factors and implementing strategies for motivation and organizational effectiveness</li> <li>5. To anticipate emerging challenges and opportunities</li> </ol>						
<b>Expected Course Outcome:</b>						
<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> <li>1. Explain the nature and scope of organizational behavior</li> <li>2. Appreciate the interplay of psychology, sociology and social psychology to understand behavior</li> <li>3. Understand the concepts and factors influencing organization behavior.</li> <li>4. Apply group theories, understand group dynamics and behavior theories for organizational development.</li> <li>5. Gain knowledge of the different types of leadership and be able adapt to the functioning style of the organizations that employ them</li> <li>6. Be aware of factors that determine effectiveness of an organization and evolve reward systems that elevate the performance of the individual and team</li> <li>7. Understand change and be prepared and prepare team members to be able to embrace the change</li> <li>8. Be aware of practice of industry in setting up organizational structures</li> </ol>						
<b>Module: 1</b>	<b>Approaches to Organizational Behaviour</b>	<b>4 hours</b>				
Understanding - Definitions – Nature and scope of Organizational behaviour – basic approaches – Importance – Fundamental Concepts.						
<b>Module: 2</b>	<b>Disciplines contributing to Organizational Behaviour</b>	<b>4 hours</b>				
Psychology – Sociology – Social Psychology – Role of Behavioural Science – Understanding Human Behaviour – Controlling and Directing Behaviour – Organizational Adaptation						
<b>Module: 3</b>	<b>Factors Influencing Organizational Behaviour</b>	<b>4 hours</b>				
The Individual – Group – Organization – Environment – Constraints – Behavioural bias – Management and Human factor – Skills of Manager – Importance of Skills – Similarities and differences among individual – Personality – Learning - Attitudes.						
<b>Module: 4</b>	<b>Theories of group formation, group decision making and Techniques</b>	<b>4 hours</b>				
Homous theory - Theory of propinquity – Balance Theory – Exchange Theory – Types of Group – Group cohesiveness – Group Vs Individual decision making – Advantages – Disadvantage– Efficiency – Brainstorming – Synectics – Nominal Group – The Delphi Decision Making –						

Electronic Meetings.			
<b>Module: 5</b>	<b>Leadership and Motivation</b>		<b>4 hours</b>
Leadership – Influencing process – Authority – Power – Influence – Trait Theories – Behaviour Theory – Motivation Process – Behaviour – Motives – Goals – Types of Needs – Primary Needs – Secondary Needs.			
<b>Module: 6</b>	<b>Organizational development and effectiveness</b>		<b>4 hours</b>
Importance – Process – Values – Characteristics - Advantages –Clarification – Structural Interventions – Reward system – Task – Sensitive Training – Survey – Team building – Effectiveness – Input – Output approach – Factors affecting effectiveness.			
<b>Module: 7</b>	<b>Challenges in the Emerging Era</b>		<b>4 hours</b>
Managing a planned change – Need for change –Structural Dis-equilibrium – Dealing with resistance to change - Leadership power and influence in Organizations, Gender & Diversity in Organizations, Managing Stress- Cross culture organization behavior- Virtual Team work			
<b>Module: 8</b>	<b>Contemporary Issues</b>		<b>2 hours</b>
Industrial Expert Lecture			
<b>Total Lecture hours</b>			<b>30 hours</b>
<b>J-component</b>			<b>60 hours</b>
Challenging Projects for an individual or a group will be given based on the basic and advancements in the course content.			
<b>Text Book(s)</b>			
<ol style="list-style-type: none"> <li>1. Daniel King, Scott Lawley, (2016) Organizational Behaviour Oxford University press, New Delhi</li> <li>2. David Buchanan, Andrzej Huczynski, (2016), Organizational Behaviour, 9<sup>th</sup> edition, Pearson.</li> </ol>

CLE6026	CONSTRUCTION PERSONNEL MANAGEMENT	L	T	P	J	C
		3	0	0	0	3
Pre-requisite	NIL	Syllabus version				
		1.0				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>To understand the principles of project life cycle and legal and regulatory requirements</li> <li>To be familiar with modern trends in the project management and project risks on organization</li> <li>To know the elements of the HR function (e.g. – recruitment, selection, training and development, etc.)</li> <li>To outline the nature and sources of conflict and explain the different strategies and approaches used in the resolution of conflict</li> <li>To understand the awareness on fundamentals of human behaviour under varying stress conditions</li> <li>To identify the laws related to labour welfare measures.</li> <li>To study the appraisal and assessment methods to improve the productivity of human resources.</li> </ol>						
<b>Expected Course Outcome:</b>						
<p>Upon completion of this course, the student will be able to</p> <ol style="list-style-type: none"> <li>Explain the principles of project life cycle and role of project managers.</li> <li>Discuss the modern trends in the project management and solve the project risks on organization.</li> <li>Know about the human resources planning and policies through proper selection and training methods</li> <li>Apply the different strategies and approaches used in the resolution of conflict</li> <li>Analyze the Organizational Behaviour related to group dynamics and team working</li> <li>Suggest labour welfare measures and the laws related to labour welfare measures.</li> <li>Apply the principles and techniques of human resource management and solution to personnel issues of typical case problems.</li> </ol>						
<b>Module: 1</b>	<b>The Owners Perspective</b>	<b>6 hours</b>				
Introduction - Project Life Cycle - Types of Construction - Selection of Professional Services - Construction Contractors - Financing of Constructed Facilities - Legal and Regulatory Requirements - Changing Environment of the Construction Industry - Role of Project Managers.						
<b>Module: 2</b>	<b>Project Management</b>	<b>5 hours</b>				
Project Management – Modern trends - Effects of Project Risks on Organization - Organization of Project Participants -Traditional Designer-Constructor Sequence - Professional Construction Management - Owner-Builder Operation						
<b>Module: 3</b>	<b>Human Resources</b>	<b>5 hours</b>				
Staffing Plan - Development and Operation of human resources - Managerial Staffing – Recruitment – Selection strategies – Placement and Training.						
<b>Module: 4</b>	<b>Human Relations</b>	<b>6 hours</b>				
Basic individual psychology – Approaches to job design and job redesign – Self managing work teams – Intergroup – Conflict in organizations – Leadership-Engineer as Managerial aspects of decision making – Significance of human relation and organizational						
<b>Module: 5</b>	<b>Organizational Behaviour</b>	<b>6 hours</b>				
Individual in organization – Motivation – Personality and creativity – Group dynamics, Team working – Communication and negotiation skills.						
<b>Module: 6</b>	<b>Welfare Measures</b>	<b>6 hours</b>				
Compensation-Wages and Salary, Employee Benefits– Safety and health – General Provident Fund – Employees Provident Fund – Group Insurance – Housing - Pension – Laws related to welfare measures.						

<b>Module: 7</b>	<b>Management and Development Methods</b>	<b>9 hours</b>
Employee appraisal and assessment- Employee services- Safety and Health-Discipline and Discharge- Special human resource problems, Performance appraisal-Employee Hand Book And Personnel Manual-Job descriptions and organization structure and Human relations-Productivity of Human resources.		
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2hours</b>
Industry Expert Lecture		
<b>Total Lecture hours</b>		<b>45 hours</b>
<b>Text Book(s)</b>		
1.	Khanka S.S (2010) , Organizational Behaviour, S Chand &Company, New Delhi.	
2.	Stephen P. Robbins and Timothy A. Judge., (2017), Essentials of Organizational Behaviour, Pearson, New Delhi.

<b>CLE6027</b>	<b>QUALITY CONTROL AND SAFETY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>2</b>	<b>0</b>	<b>0</b>	<b>4</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To study the concepts of quality assurance and control techniques in construction.</li> <li>2. To understand the techniques and concepts of Statistical Quality Control Methods</li> <li>3. To familiarize with clauses for quality management in construction Industry</li> <li>4. To study the various construction accidents and cost of construction injuries</li> <li>5. To get knowledge about the various laws related to safety in construction industry</li> <li>6. To study and understand the various safety concepts and requirements applied to construction industry.</li> </ol>						
<b>Expected Course Outcome:</b>						
<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> <li>1. Explain the importance of quality and quality management methods in construction.</li> <li>2. Construct the appropriate quality control charts and discuss the role of such charts in monitoring a process.</li> <li>3. Develop an appropriate quality assurance plan to assess the ability of the service to meet its required national and international quality standards.</li> <li>4. Apply the concepts of quality assurance and control techniques in construction.</li> <li>5. Identify the causes, investigations and prevention of accidents in the construction jobsite.</li> <li>6. Discuss about the various laws related to construction safety and worker's compensation insurance premium.</li> <li>7. Create the awareness about the role of safety in all the levels of management.</li> </ol>						
<b>Module: 1</b>	<b>Construction Quality</b>	<b>4 hours</b>				
Introduction to quality - Importance - Types – Inspection - Control and enforcement-Quality Management Systems - Responsibilities and authorities in Quality assurance -Architects, Engineers, Contractors and Consultants.						
<b>Module: 2</b>	<b>Quality Standards and Statistical Methods</b>	<b>4 hours</b>				
Planning and control of quality - Tools and techniques for quality management - Inspection of materials and machinery - Quality audits-Statistical quality control - Tools ,Control charts - Acceptance sampling, Specification and tolerances.						
<b>Module: 3</b>	<b>Quality Management</b>	<b>4 hours</b>				
Quality policy - Objectives and methods -Consumer satisfaction-Ergonomics-Time of Completion-Taguchi's concept of quality- Quality standards/codes in design and construction (ISO:9000) - Quality System Documents – Quality related training – Implementing a Quality system – Third party Certification.						
<b>Module: 4</b>	<b>Quality Assurance and Control</b>	<b>4 hours</b>				
Objectives-Regularity agent-Owner, Design, Contract and Construction Oriented Objectives, Methods-Techniques and Needs Of QA/QC-Different Aspects of Quality-Appraisals, Factors Influencing Construction Quality-Critical, Major Failure Aspects and Analysis.						
<b>Module: 5</b>	<b>Construction Accidents</b>	<b>4 hours</b>				
Injury and Accidents- Causes, Investigations and Prevention of Accidents, Hazards – Types , Nature, Causes and Control Measures - Identifications and Control Techniques - Cost of Construction Injuries-Legal Implications - Site management with regard to safety –Safety training and implementation - Construction safety and health manual.						

<b>Module: 6</b>	<b>Safety Policy</b>	<b>4 hours</b>	
Need- Safety provisions -Factory Act-Laws related to the Industrial Safety-Measurement of Safety Performance, Safety Audit, Problem Areas in Construction Safety-Elements of an Effective Safety Programme-Job site Safety assessment- Safety Meetings-Safety Incentives			
<b>Module: 7</b>	<b>Safety Organization</b>	<b>4 hours</b>	
Safety Policy, Safety Record Keeping, Safety Culture-Safe Workers-Safety and First Line Supervisors- Middle Managers-Top Management Practices, Company Activities and Safety-Sub contractual obligation, Project Coordination and Safety Procedures			
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>	
<b>Total Lecture hours</b>		<b>30 hours</b>	
<b>Sample list of projects for J components</b>		<b>60 hours</b>	
<ol style="list-style-type: none"> <li>1. Statistical evaluation based on field tests.</li> <li>2. Quality system document reports in an ongoing construction project</li> <li>3. Preparation of control charts and sampling criteria for materials.</li> <li>4. Prepare life cycle costing for a construction project.</li> </ol>

CLE6028	PROJECT FORMULATION AND APPRAISAL	L	T	P	J	C
		3	0	0	0	3
Pre-requisite	NIL	Syllabus version				
		1.0				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>To make students taking this course be able to understand about the project formulation</li> <li>To be able to work out the costing of construction projects</li> <li>To understand the project be able to do the appraisal of Projects with the inherent risks</li> <li>To find effective options for develop the finance model of Project through its life cycle</li> <li>To identify areas where private sector participation can be motivated</li> </ol>						
<b>Expected Course Outcome:</b>						
<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> <li>Explain the aspects to be considered when evolving the project life cycle</li> <li>Appreciate the various steps and FEED studies</li> <li>Identify the factors that will impact the time value of money</li> <li>Prevent losses in project because of smart identification of factors that affect operational expenses during formulation of the project</li> <li>Relate various risks when appraisal of a project at various stages</li> <li>Gain understanding of the various factors that affect the financing structure of a project and identify suitable financing models and financing agencies</li> <li>Understand implication of various infrastructure development models</li> <li>Be aware of practice of industry</li> </ol>						
<b>Module: 1</b>	<b>Project Formulation</b>	<b>6 hours</b>				
Capital investments - Generation and Screening of Project Ideas - Project identification- Project evaluation an overview, the project cycle, planning, project selection and appraisal, project quality factors and basic needs the measurement of project performance						
<b>Module: 2</b>	<b>Project Initiation</b>	<b>5 hours</b>				
Capital budgeting – feasibility study– market, technical, financial, economic and ecological – Market and Demand analysis- Detailed technical analysis						
<b>Module: 3</b>	<b>Time Value of Money</b>	<b>6 hours</b>				
Time Value of Money –Future value of single amount, Present value of single amount, Future value of an annuity, Present value of an annuity-Simple interest-Compound interest - project cash Flows.						
<b>Module: 4</b>	<b>Project Costing</b>	<b>6 hours</b>				
Investment Criteria- Discounting criteria-Net present value (NPV), Benefit cost ratio(BCR), internal rate of return(IRR)- Non-Discounting criteria - Pay Back Period, Accounting rate of return(ARR), Urgency - Investment analysis in practice.						
<b>Module: 5</b>	<b>Project Appraisal</b>	<b>9 hours</b>				
Investment Appraisal – International Practice of Appraisal – Analysis of Risk – Different Methods – Selection of a Project and Risk Analysis in Practice.						
<b>Module: 6</b>	<b>Project Financing</b>	<b>5 hours</b>				
Project Financing – Means of Finance – Financial Institutions – Special Schemes – Key Financial Indicators – Ratios.						
<b>Module: 7</b>	<b>Private Sector Participation</b>	<b>6 hours</b>				
Private sector participation in Infrastructure Development Projects - BOT, BOLT, BOOT - Scope of						

Technology Transfer - Technology Transfer and Foreign Collaboration - Case Study.			
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>	
		<b>Total Lecture hours</b>	<b>45 hours</b>
<b>Text Book(s)</b>

<b>CLE6029</b>	<b>INFRASTRUCTURE DEVELOPMENT AND BOT, BOOT PROJECTS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>2</b>	<b>0</b>	<b>0</b>	<b>4</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To know the infrastructure development polices available in central and state governments of India</li> <li>2. To understand the benefits and challenges in infrastructure privatization</li> <li>3. To obtain the knowledge of different types of risks in National and International Infrastructure Projects</li> <li>4. To understand the economic constraints and environmental sustainability to develop a management plan for critical infrastructure structures essential for the needs of society.</li> <li>5. To study about the integrated framework used for successful infrastructure planning and management</li> </ol>						
<b>Expected Course Outcome:</b>						
<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> <li>1. Interpret the polices available in central and state governments of India and their application in infrastructure development.</li> <li>2. Discuss the challenges in privatization of water supply, power and road transportation Infrastructure in India</li> <li>3. Apply the concepts of project appraisal techniques for the development and management of public infrastructure projects and determine feasible project milestones.</li> <li>4. Assess the various risks on infrastructure privatization and identify methods for the management of risks.</li> <li>5. Describe the interplay between engineering project, infrastructure management and sustainability in the complex real-world situations</li> <li>6. Identify the principles of strategic planning and risk analysis in successful project and infrastructure management</li> <li>7. Explain the case studies of International projects and select project management practices to meet the needs of stakeholders</li> </ol>						
<b>Module: 1</b>	<b>An Overview of Infrastructure Engineering</b>					<b>4 hours</b>
Overview on infrastructure development polices of central and state governments in India. Programmes and initiatives for development of roads, railways, airports, and urban infrastructure in India.						
<b>Module: 2</b>	<b>Role of Public and Private Sector</b>					<b>4 hours</b>
A Historical Overview of Infrastructure Privatization. The Benefits of Infrastructure Privatization, Problems with Infrastructure Privatization , Challenges in Privatization ,Water Supply, Power, Infrastructure, Road Transportation Infrastructure in India – Case studies						
<b>Module: 3</b>	<b>Infrastructure Planning</b>					<b>4 hours</b>
Overview of various planning tools - Project appraisal by financial analysis, economic analysis, and environmental and societal impact assessments - Concept of sustainable infrastructure development.						
<b>Module: 4</b>	<b>Infrastructure Implementation Risks</b>					<b>4 hours</b>
Mapping and Facing the Landscape of Risks in Infrastructure Projects, Core Economic and Demand Risks, Political Risks, Socio-Environmental Risks, Cultural Risks in International Infrastructure Projects, Challenges in Construction and Maintenance of Infrastructure – Case studies.						
<b>Module: 5</b>	<b>Environmental and Social Impact Assessment Aspects</b>					<b>4 hours</b>
Categories, Attributes and Parameters, Identification of Environmental and Social Impacts over Project Area and over Project Cycle. Special Considerations Involving Land and Water Interrelationships -						

Environmental Laws and Regulations			
<b>Module: 6</b>	<b>Strategies for Successful Infrastructure Project Implementation</b>		<b>4 hours</b>
Risk Management Framework for Infrastructure Projects, Shaping the Planning Phase of Infrastructure Projects. Governments Role in Infrastructure Implementation, An Integrated Framework for Successful Infrastructure Planning and Management - Infrastructure Management Systems and Future Directions.			
<b>Module: 7</b>	<b>Private Sector Participation</b>		<b>4 hours</b>
International projects - Detailed Project Reports (DPR) / Build Own Operate (BOO) / Build Own Operate Transfer (BOOT) Projects / Build Operate and Transfer (BOT) - case studies.			
<b>Module: 8</b>	<b>Contemporary Issues</b>		<b>2 hours</b>
<b>Total Lecture hours</b>			<b>30 hours</b>
<b>Sample list of J component Projects</b>			<b>60 hours</b>
Prepare detailed case study about different metros, highways, high rise buildings, Port construction etc., related to infrastructure development.

<b>CLE6030</b>	<b>ESTIMATING, TENDERING AND BIDDING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To understand the various types of estimates and process involved in sanction of budget for a project.</li> <li>2. To study about analysis of rate and standard methods followed by different organizations.</li> <li>3. To attain the knowledge about the specification and its importance in a project.</li> <li>4. To know the about the tendering and its process in construction.</li> <li>5. To attain the knowledge about contracts, types of contracts, contract documents and roles and functions of participants to the contract.</li> <li>6. To obtain the knowledge about the conditions of contract, Bidding and Bidding models.</li> </ol>						
<b>Expected Course Outcome:</b>						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> <li>1. Prepare the project cost estimation and detailed estimate for getting approval of projects.</li> <li>2. Find the rate for an item of work in a project by using a standard methods.</li> <li>3. Prepare a detailed specification as per available drawing and detailing</li> <li>4. Prepare a tender document for a budget sanctioned project.</li> <li>5. Identify the suitable construction contract method and able to prepare the contract document.</li> <li>6. Identify the suitable bidding models and also estimate the overhead charges in a project.</li> </ol>						
<b>Module: 1</b>	<b>Estimation</b>	<b>5 hours</b>				
Project cost estimation - Approximate Estimate and administrative approval - expenditure sanction - Detailed Estimate.						
<b>Module: 2</b>	<b>Rate Analysis</b>	<b>5 hours</b>				
Rate analysis - standard methods as followed by government organizations for tendering purposes - as followed by contractor organizations for bidding Purposes.						
<b>Module: 3</b>	<b>Specifications</b>	<b>6 hours</b>				
Definitions, relationship with drawings, purpose, benefits, organization of specification, drafting/writing the specifications, types of specifications.						
<b>Module: 4</b>	<b>Tendering Process</b>	<b>9 hours</b>				
Preparation of tender documents estimating, pre-qualification, bid evaluation, award of contract, project financing and contract payments, contracts close out and completion, E-tendering.						
<b>Module: 5</b>	<b>Contract Agreement</b>	<b>6 hours</b>				
Contracts, types of construction contracts, Evaluation of contract documents, need for documents, present stage of national and international contract documents, roles and functions of participants to the contract.						
<b>Module: 6</b>	<b>Conditions of Contract</b>	<b>6 hours</b>				
Clarification by parties to contract, obligations and responsibilities of the parties, protection and indemnification, bonds and insurance, subsurface conditions, inspection of work, change of work, rejected work and deficiencies.						
<b>Module: 7</b>	<b>Bidding</b>	<b>6 hours</b>				
Bidding models and bidding strategies, Owner's and contractor's estimate - Overhead charges - Internationally adopted formulae. Enlistment of contractors.						

<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>	
<b>Total Lecture hours</b>		<b>45 hours</b>

CLE6031	FORMWORK FOR CONCRETE STRUCTURES	L	T	P	J	C
		3	0	0	0	3
<b>Pre-requisite</b>	NIL	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>To develop the conceptual understanding of design, construction and erection of formwork.</li> <li>To impart the knowledge about different types of form work used for special structures.</li> </ol>						
<b>Expected Course Outcome:</b>						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> <li>Carryout the detailed planning of form works used for construction of different structures</li> <li>Identify the suitable Materials for Formwork</li> <li>Calculate the various loads on the formwork and its accessories</li> <li>Design the form works for construction of different structures</li> <li>Execute the different techniques used for construction and erection of form work.</li> <li>Analyse the form work for shell type structures</li> <li>Carryout the detailed planning of Slip Forms and Scaffolds</li> </ol>						
<b>Module: 1</b>	<b>Planning for Form Work</b>	<b>6 hours</b>				
Introduction –Types of Form work- Forms for foundations, columns, beams walls etc., General objectives of formwork building - Detailed planning - Calculation of labour constants Scaffold frames - Framed panel formwork						
<b>Module: 2</b>	<b>Materials for Formwork</b>	<b>6 hours</b>				
Lumber - Types - Finish - Sheathing boards working stresses - Repetitive member stress - Plywood - Types and grades - Jointing Boarding - Textured surfaces and strength - Reconstituted wood - Steel – Aluminum						
<b>Module: 3</b>	<b>Formwork Accessories &amp; Pressures</b>	<b>6 hours</b>				
Formwork Accessories -Hardware and fasteners - Nails in Plywood - Allowable withdrawal load and lateral load. Pressures on formwork - Examples - Vertical loads for design of slab forms - Uplift on shores - Laterals loads on slabs and walls.						
<b>Module: 4</b>	<b>Design of Forms and Shores</b>	<b>9 hours</b>				
Design Principles - Allowable stresses - Design of Wall forms - Slab forms - Beam forms - Column forms - Design Tables for Wall formwork - Slab Formwork - Column Formwork - Slab props - Stacking Towers - Free standing and restrained - Rosett Shoring - Shoring Tower - Heavy Duty props.						
<b>Module: 5</b>	<b>Building and Erecting the Form Work</b>	<b>6 hours</b>				
Carpentry Shop and job mill - Forms for Footings - Slab form systems - Sky deck and Multiflex - Customized slab table - Standard Table module forms - Swivel head and uniportal head - Assembly sequence - Cycling with lifting fork - Moving with table trolley and table prop. Various causes of failures - ACI - Design deficiencies - Permitted and gradual irregularities.						
<b>Module: 6</b>	<b>Forms for Domes and Tunnels</b>	<b>5 hours</b>				
Hemispherical, Parabolic, Translational shells - Typical barrel vaults - Folded plate roof details - Forms for Thin Shell roof slabs design considerations - Strength requirements -Tunnel forming components - Curb forms invert forms - Arch forms - Concrete placement methods - Cut and cover construction - Bulk head method - Pressures on tunnels - Continuous Advancing Slope method - Form construction - Shafts.						
<b>Module: 7</b>	<b>Slip Forms and Scaffolds</b>	<b>5 hours</b>				

Slip Forms - Principles -Types - advantages - Functions of various components - Planning - Desirable characteristics of concrete - Common problems faced - Safety in slip forms special structures built with slip form Technique - Types of scaffolds - Putlog and independent scaffold - Single pole scaffolds - Truss suspended - Gantry and system scaffolds.			
<b>Module: 8</b>	<b>Contemporary Issues</b>		<b>2 hours</b>
<b>Total Lecture hours</b>			<b>45 hours</b>
<b>Text Book(s)</b>

<b>CLE6032</b>	<b>PREFABRICATED TECHNIQUES AND MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To understand the design principles related to prefabrication elements.</li> <li>2. To obtain knowledge on the concepts of production, transportation, assembling &amp; erection of precast buildings.</li> </ol>						
<b>Expected Course Outcome:</b>						
<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> <li>1. Describe various structural systems and standard organizing requirements.</li> <li>2. Identify and differentiate structural behaviour of building elements.</li> <li>3. Design building elements and applications.</li> <li>4. Identify and describe working principles of various joints.</li> <li>5. Identify and describe working principles of various connections.</li> <li>6. Apply principles and describe assembling process.</li> <li>7. Identify and describe various tools in assembling and erection of buildings.</li> <li>8. Design and detail precast and activities by innovation.</li> </ol>						
<b>Module: 1</b>	<b>Introduction</b>	<b>7 hours</b>				
Types of prefabrication, prefabrication systems and structural schemes- Disuniting of structures- Structural behaviour of precast structures - Specific requirements for planning and layout of prefabrication plant - IS Code specifications.						
<b>Module: 2</b>	<b>Precast Cast Elements</b>	<b>7 hours</b>				
Handling and erection stresses- Application of prestressing of roof members; floor systems two way load bearing slabs, pre stressed beam , Precast column -precast shear walls Wall panels, hipped plate and shell structures.						
<b>Module: 3</b>	<b>Prefabricated Design</b>	<b>7 hours</b>				
Designing and detailing prefabricated units for 1) industrial structures 2) Multistory buildings and 3) Water tanks, silos bunkers etc., 4) Application of prestressed concrete in prefabrication.						
<b>Module: 4</b>	<b>Joints</b>	<b>6 hours</b>				
Basic mechanism- Dimensioning and detailing of joints for different structural connections; compression joint-shear joint - tension joint						
<b>Module: 5</b>	<b>Connections</b>	<b>6 hours</b>				
Pin jointed connection-moment resisting connections- beam to column- column foundation connections						
<b>Module:6</b>	<b>Prefabricated Buildings</b>	<b>6 hours</b>				
Production, Transportation & erection- Shuttering and mould design Dimensional tolerances- Erection of R.C. Structures, Total prefabricated buildings assembly Process						
<b>Module:7</b>	<b>Machinery and Equipment</b>	<b>4 hours</b>				
Plant machinery, casting yard- casting and stacking						
<b>Module: 8</b>	<b>Contemporary issues</b>	<b>2 hours</b>				
<b>Total Lecture hours</b>						<b>45 hours</b>
<b>Text Book(s)</b>

<b>CLE6033</b>	<b>GREEN BUILDING AND ENERGY MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To study about the concepts of green building and low energy approaches.</li> <li>2. To get a thorough knowledge about Green building systems, auditing and energy management.</li> <li>3. Recognize and demonstrate methods for green project management, certification registration and documentation and green rating system compliance.</li> </ol>						
<b>Expected Course Outcome:</b>						
<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> <li>1. Understand the concepts and factors influencing green building concepts, systems and energy management.</li> <li>2. Impact of indoor environmental quality on occupant well-being and comfort relevant to 21st century in India</li> <li>3. Identify and compare existing energy codes, green building codes and green rating systems.</li> <li>4. Study about the fundamentals of energy and energy production systems pertaining to Residential, Commercial, Institutional and Public Buildings.</li> <li>5. Able to conduct energy audit and apply conservation and maintenance measures</li> <li>6. Demonstrate the energy management of electrical equipment and appliances in buildings</li> <li>7. Use low embodied energy industrial and building materials and cost effective building technologies</li> </ol>						
<b>Module: 1</b>	<b>Introduction</b>	<b>6 hours</b>				
Green Composites for buildings - Concepts of Green Composites - Water Utilisation in Buildings, Low Energy Approaches to Water Management - Management of Solid Wastes , Sullage Water and Sewage - Urban Environment and Green Buildings - Green Cover and Built Environment.						
<b>Module: 2</b>	<b>Green Building Systems</b>	<b>6 hours</b>				
Comfort in Building , Thermal Comfort in Buildings- Issues, Heat Transfer Characteristic of Building Materials and construction techniques , Incidence of Solar Heat on Buildings-Implications of Geographical Location- Green management in India - relevance in twenty first century.						
<b>Module: 3</b>	<b>Green Building Auditing</b>	<b>6 hours</b>				
Environmental reporting and ISO 14001, Climate change business and ISO 14064 , Energy and resource conservation-Principles, Design of green buildings-rating systems-LEED Standards – Indian green building council rating system for various types of projects.						
<b>Module: 4</b>	<b>Energy</b>	<b>9 hours</b>				
Fundamentals of Energy - Energy production systems - Heating, Ventilating and Air conditioning - Solar Energy - Energy Economic Analysis - Energy Conservation and Audits - Domestic Energy Consumption - Savings - Primary Energy use in Buildings – Residential - Commercial - Institutional and Public Buildings.						
<b>Module: 5</b>	<b>Energy Efficiency</b>	<b>6 hours</b>				
Energy in Building Design-Energy Efficient and Environmental Friendly Building- Climate, Sun and solar radiation-Psychometrics-Passive Heating and Cooling Systems- Energy Audit-Types - analysis of results-Energy flow diagram-Energy consumption/Unit production- Identification of wastage-Priority of conservative measures-Maintenance of Energy Management Programme						
<b>Module: 6</b>	<b>Energy Management</b>	<b>5 hours</b>				
Energy Management of Electrical Equipment-Improvement of Power Factor-Management of Maximum						

Demand- Energy Savings in Pumps – Fans – Compressed Air Systems-Lighting Systems-Air Conditioning Systems –Operation and Maintenance- Modifications- Energy Recovery Dehumidifier-Water Heat Recovery-Steam Plants.			
<b>Module: 7</b>	<b>Alternate Energy Resources</b>	<b>5 hours</b>	
Industrial and Buildings Wastes - Biomass Resources for buildings - Utility of Solar energy in buildings concepts - Low Energy Cooling - Case studies of Solar Passive Cooled and Heated Buildings - Building materials: sources, methods of production and environmental Implications. Embodied Energy in Building Materials. Cost Effective building technologies.			
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>	
Industrial Expert Lecture			
<b>Total Lecture hours</b>			<b>45 hours</b>
<b>Text Book(s)</b>			
1.	Osman Attmann, (2010), “Green Architecture Advanced Technologies and Materials”. McGraw Hill.

CLE6034	AUTOMATION IN CONSTRUCTION INDUSTRY	L	T	P	J	C
		3	0	0	0	3
Pre-requisite	NIL	Syllabus version 1.0				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>To get knowledge about application of automation and use of robots in construction.</li> <li>To learn the basic concept of Sensors and inspection</li> <li>To study the existing and prototype equipment for construction.</li> <li>To study on Data networking, robotic technologies for prefabrication elements.</li> </ol>						
<b>Expected Course Outcome:</b>						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> <li>Understand the application of building management system and automation in on and off site projects.</li> <li>Solve the construction issues through robotic techniques.</li> <li>Application of computer in construction Information processing</li> <li>Understand the concepts of Communication and office automation system</li> <li>Application of Robotics in Construction</li> </ol>						
<b>Module: 1</b>	<b>Introduction</b>	<b>6 hours</b>				
Concept and application of Building Management System (BMS) and Automation, requirements and design considerations and its effect on functional efficiency of building automation system, architecture and components of BMS- Review and analysis of state- of –art in construction automation						
<b>Module: 2</b>	<b>Sensors and inspection</b>	<b>6 hours</b>				
Field sensors actuators, controllers, non-destructive evaluation, data acquisition , examples of sensors in existing automated equipment						
<b>Module: 3</b>	<b>Off and On site automation in construction</b>	<b>6 hours</b>				
Off- site automation in construction Information processing (computer applications), materials processing , case study (concrete batch plant) - Existing and prototype equipment for construction – case study (concrete placement and finishing), final product design session						
<b>Module: 4</b>	<b>Building Automation</b>	<b>9 hours</b>				
Introduction to building automation systems – components– Heating, ventilation, and air conditioning (HVAC)– Lighting – Electrical systems water supply and sanitary systems– Fire safety – security -Communication and office automation system -Water pump monitoring & control - Control of Computerized HVAC Systems						
<b>Module: 5</b>	<b>Networking</b>	<b>6 hours</b>				
Data networking– IBMS system and its components – Centralized control equipment’s – substation and field controllers – Gamma building control – energy-efficient building and room automation.						
<b>Module: 6</b>	<b>Robotics in Construction</b>	<b>5 hours</b>				
Automation and robotic technologies for customized component, module and building prefabrication- Elementary technologies and single – Task construction robots - Site automation-robotic on site factories.						
<b>Module: 7</b>	<b>Construction Robots</b>	<b>5 hours</b>				
Selecting robot- Activated concrete cutting robot, concrete floor finishing robot- Ceiling panel positioning robot- Exterior wall painting robot-safety and training- case studies.						

<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>	
Industrial Expert Lecture			
<b>Total Lecture hours</b>		<b>45 hours</b>	
<b>Text Book(s)</b>

CLE6035	CONSTRUCTION TECHNIQUES OF STEEL AND CONCRETE COMPOSITE STRUCTURES	L	T	P	J	C
		3	0	0	0	3
Pre-requisite	NIL	Syllabus version				
		1.0				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>To introduce the concept of steel-concrete composite construction and their applications in engineering</li> <li>To understand the various types of connections in steel &amp; steel-concrete composite construction</li> <li>To learn the methodology, construction sequence &amp; techniques of framed industrial structures</li> <li>To equip students with basic concept of sandwich construction</li> </ol>						
<b>Expected Course Outcome:</b>						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> <li>Envisage the behaviour of steel-concrete composite members</li> <li>Perform limit state design for steel structures</li> <li>Identify suitable connections in steel structures and provide connection details</li> <li>Prepare and propose suitable construction sequence and techniques for framed industrial structures</li> <li>Identify and propose suitable materials for sandwich constructions</li> </ol>						
<b>Module: 1</b>	<b>Introduction</b>	<b>5 hours</b>				
Introduction to Steel - Concrete Composite Construction - Theory of Composite Structures - Introduction to Steel - Concrete - Steel - Sandwich Construction - Behaviour of composite beams and columns						
<b>Module: 2</b>	<b>Steel Structures</b>	<b>9 hours</b>				
Types of steel structures, grades of structural steel, various rolled steel sections, relevant IS specifications such as IS:800-2007, IS:808-1989, IS:875 part I to III, SP: 6(1), SP: 6(6), SP38. IS:4000- 1992, codes for welded connections , Philosophy of limit state design for strength and serviceability, partial safety factor for load and resistance, design load combinations.						
<b>Module: 3</b>	<b>Connections</b>	<b>6 hours</b>				
Bearing type joints - Unstiffened and stiffened seat connections - Moment resisting connection of brackets-Bolted and welded-semi-rigid connections - Types of weldings – Types of rivets.						
<b>Module: 4</b>	<b>Industrial Buildings</b>	<b>6 hours</b>				
Industrial buildings- construction techniques of braced and unbraced - Gable frames with gantry- Rigid industrial frames – Fixing and assembly of steel structures.						
<b>Module: 5</b>	<b>Special Structures</b>	<b>6 hours</b>				
Introduction to steel-concrete composite structures - construction techniques for composite structures – composite beam – column construction - shear connectors – behaviour – flexural stress – longitudinal shear transfer – transfer shear.						
<b>Module: 6</b>	<b>Sandwich Constructions</b>	<b>5 hours</b>				
Basic design concept of sandwich construction – Materials used for sandwich construction – Failure modes.						
<b>Module: 7</b>	<b>Fabrication and assembly</b>	<b>6 hours</b>				
Various open and closed mould process – fibers types – resins types – properties and application – composite structures – maintenance and repair.						
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>				
<b>Total Lecture hours</b>		<b>45 hours</b>				

<b>Text Book(s)</b>			
1.	Johnson R.P. (2012), Composite Structures of Steel and Concrete: Beams, Slabsm Columns and Frames for Buildings, Wiley India Pvt Ltd.

<b>CLE6036</b>	<b>CONSTRUCTION TECHNIQUES OF DEEP FOUNDATIONS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To understand the various types of deep foundations.</li> <li>2. To know the various methods and techniques involved in construction of deep foundations</li> <li>3. To know the various equipment involved in construction of deep foundation.</li> <li>4. To understand the management and safety requirements in construction of deep foundations</li> <li>5. To know the concept of sheet piles, coffer dams and reinforced earth walls.</li> </ol>						
<b>Expected Course Outcome:</b>						
<p>Upon completion of this course, the student will be able to:</p> <ol style="list-style-type: none"> <li>1. Understand the various types of deep foundations.</li> <li>2. Know the various methods and techniques involved in construction of deep foundations</li> <li>3. Know the various equipment involved in construction of deep foundation.</li> <li>4. Understand the management and safety requirements in construction of deep foundations.</li> <li>5. The concept of sheet piles, coffer dams and reinforced earth walls.</li> </ol>						
<b>Module: 1</b>	<b>Introduction to deep foundations</b>	<b>6 hours</b>				
Introduction- Preliminary investigations, subsurface exploration, data interpretation and estimation of various sub-soil properties; Types of deep foundations; Requirements for deep foundations; Codal provisions on safety requirements for deep foundations.						
<b>Module: 2</b>	<b>Bored piles</b>	<b>5 hours</b>				
Classification of bored piles; Construction methods and construction sequences of bored piles; Equipment's used for boring, drilling and concreting; Piling supervision and quality assurance; Design considerations and pile capacity						
<b>Module: 3</b>	<b>Drivenpiles</b>	<b>6 hours</b>				
Classification of driven piles; Selection of type of piles and method of installation; Pile driving equipment's; Construction and quality assurance of driven piles; Advantages and disadvantages of driven piles; Pile damages and pile integrity test; Design considerations and pile capacity						
<b>Module: 4</b>	<b>Well Foundations</b>	<b>5 hours</b>				
Types of wells or caissons; Different shapes of well; Drilled shafts and caissons; Methods and construction sequences; Design procedure; Advantages and disadvantages of well foundation.						
<b>Module: 5</b>	<b>Diaphragm wall</b>	<b>6 hours</b>				
Deep excavations and protection systems; Applications of diaphragm wall; Diaphragm wall construction methods; Design procedure; Advantages and disadvantages.						
<b>Module: 6</b>	<b>Sheet piles and Cofferdams</b>	<b>7 hours</b>				
Sheeting and bracing systems in shallow and deep open cuts in different soil types –Cantilever sheet piles, Anchored sheet piles; Construction methods and sequences; Design procedure; Merits and demerits. Types of Cofferdams; Cofferdams components and construction sequences; design procedure for cellular coffer dam; merits and demerits						
<b>Module: 7</b>	<b>Reinforced Earth Walls</b>	<b>7 hours</b>				

Introduction; Advantages of RE walls; Behaviour of RE walls; Materials for reinforced earth structures; Soil-reinforcement interaction; Internal and external stability conditions; Design criteria; Field applications of RE walls.			
<b>Module: 8</b>	<b>Contemporary issues</b>	<b>3 hours</b>	
<b>Total Lecture hours</b>		<b>45 hours</b>

<b>CLE6037</b>	<b>FLEXIBLE AND RIGID PAVEMENTS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To enable the student to identify the materials that suit pavement construction.</li> <li>2. To enable the student to design flexible and rigid pavements.</li> <li>3. To make the student familiar with the methods of constructing pavements.</li> <li>4. To enable the student to measure pavement distresses and design overlays.</li> </ol>						
<b>Expected Course Outcome:</b>						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> <li>1. Evaluate the suitability of soil for being used as subgrade for pavements and propose methods to prepare a stable subgrade.</li> <li>2. Choose the bitumen that is suitable for pavement in a particular site and design the flexible pavement mix.</li> <li>3. Design a flexible pavement using IRC and Asphalt Institute methods.</li> <li>4. Evaluate materials for their suitability in using for rigid pavements.</li> <li>5. Design a rigid pavement using IRC method.</li> <li>6. Describe methods of flexible and rigid pavement construction.</li> <li>7. Identify and measure pavement distresses and design overlays.</li> </ol>						
<b>Module: 1</b>	<b>Subgrade</b>	<b>9 hours</b>				
Significance of subgrade soil – soil classification – evaluation of soil strength – CBR and plate load test – earth work grading – construction of embankments and cuttings – preparation of subgrade – quality control tests – subgrade stabilization						
<b>Module: 2</b>	<b>Materials for Flexible Pavement</b>	<b>6 hours</b>				
Bitumen – types and grades – properties and testing of materials used in granular layers and bituminous layers – Types of granular and bituminous mixes — mix design for granular materials – bituminous mix design - super pave concepts – new materials like polymer modified bitumen, geosynthetics etc.						
<b>Module: 3</b>	<b>Design of Flexible Pavements</b>	<b>6 hours</b>				
Principle, design steps, advantages and applications of different pavement design methods – Group Index, CBR, McLeod, Kansas triaxial test, IRC and Asphalt Institute methods						
<b>Module: 4</b>	<b>Materials for Rigid Pavement</b>	<b>6 hours</b>				
Cement – grades – chemical composition – hydration of cement – testing – admixtures – fibres - properties and testing of pavement quality concrete – mix design – acceptance criteria						
<b>Module: 5</b>	<b>Design of Rigid Pavements</b>	<b>6 hours</b>				
Stresses and deflections in rigid pavements – Westergaard’s analysis, Bradbury’s coefficients, IRC design charts – wheel load stress, warping stress, frictional stress and combination of stresses – types of joints – Design of slab and joints – IRC method of design						
<b>Module: 6</b>	<b>Construction Procedures</b>	<b>5 hours</b>				
Methods of construction and field control checks for various types of flexible pavement layers – recycling of bituminous materials. Cement concrete pavements – methods of construction of various layers – joints-quality control tests						
<b>Module: 7</b>	<b>Evaluation and Maintenance</b>	<b>5 hours</b>				

Distresses in flexible and rigid pavements – structural and surface condition evaluation techniques – maintenance strategies - pavement performance prediction concepts and models – design of overlays			
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>	
		<b>Total Lecture hours</b>	<b>45 hours</b>

<b>CLE6004</b>	<b>REPAIR AND REHABILITATION OF STRUCTURES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>				
		<b>1.1</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To impart broad knowledge in the area of repair and rehabilitation of structures</li> <li>2. To understand about various causes of deterioration of structures</li> <li>3. To obtain the knowledge about corrosion of structures</li> <li>4. To understand the properties of repair materials</li> <li>5. To know various repair techniques and strengthening methods</li> </ol>						
<b>Expected Course Outcome:</b>						
<p>Upon completion of this course, the student will be able to</p> <ol style="list-style-type: none"> <li>1. Explain the role of the maintenance engineer</li> <li>2. Describe the causes of deterioration of concrete, steel, masonry and timber structures</li> <li>3. Identify the effect of corrosion on structures</li> <li>4. Explain the NDT techniques to assess the condition of the structures</li> <li>5. Describe various properties and applications of repair materials</li> <li>6. Explain the techniques for repairing</li> <li>7. Discuss the Strengthening of distressed buildings</li> </ol>						
<b>Module: 1</b>	<b>Introduction</b>	<b>5 hours</b>				
Importance of maintenance - Types of maintenance - Decay of structures- Role of the Maintenance Engineer - Quality Assurance for concrete construction - Design and construction errors.						
<b>Module: 2</b>	<b>Deterioration of Structures</b>	<b>6 hours</b>				
Causes of deterioration of concrete, steel, masonry and timber structures - surface deterioration - efflorescence - Causes and preventive measures.						
<b>Module: 3</b>	<b>Corrosion of Structures</b>	<b>6 hours</b>				
Corrosion mechanism - Effects of cover thickness and cracking - Methods of corrosion protection – Inhibitors - Coatings - Cathodic protection for reinforcements.						
<b>Module: 4</b>	<b>Inspection and Assessment of Distressed structures</b>	<b>6 hours</b>				
Visual inspection – Non-destructive tests –Ultrasonic pulse velocity method – Rebound hammer technique– Pullout tests – Core test.						
<b>Module: 5</b>	<b>Materials for Repair</b>	<b>6 hours</b>				
Special concretes and mortar - Concrete chemicals - Special elements for accelerated strength gain - Expansive cement- Polymer concrete – Ferro cement, Fibre reinforced concrete - Fibre reinforced plastics.						
<b>Module: 6</b>	<b>Techniques for Repair</b>	<b>6 hours</b>				
Techniques for repairing of spalling and disintegration of structures - Grouting –Autogenous healing- Pre-packed concrete- Protective surface coating.						
<b>Module:7</b>	<b>Strengthening of distressed buildings</b>	<b>6 hours</b>				
Repairs to overcome low member strength – Deflection - Chemical disruption - Weathering wear - Fire leakage - Marine exposure- Use of FRP- NDT tests						
<b>Module: 8</b>	<b>Contemporary issues</b>	<b>2 hours</b>				

<b>Total Lecture hours</b>		<b>45 hours</b>	
<b>Text Book(s)</b>

CLE6008	ENVIRONMENTAL IMPACT ASSESSMENT	L	T	P	J	C
		3	0	0	0	3
Pre-requisite	NIL	Syllabus version				
		1.1				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To understand the concepts of EIA and also emphasis the role of engineers in EIA and Environmental impact factors.</li> <li>2. To know the legislations to be used for enforcement of environmental acts and the role of public participation</li> <li>3. To discuss the methods to be used in EIA and legal systems related to environmental management systems (EMS) (EIA, Environmental Audit (EA), Life cycle Assessment (LCA)) for cleaner production and sustainable development.</li> <li>4. To know the impacts occurred to physical environment by the projects</li> <li>5. To know the impacts occurred to biological environment by the projects</li> <li>6. To know the impacts occurred to human resources by the projects</li> <li>7. To draft a EIA for specific projects and understanding the mitigation and monitoring methods</li> <li>8. To get exposed to practical experience for drafting a EIA through consultant/Government</li> </ol>						
<b>Expected Course Outcome:</b>						
<p>Upon completion of this course the student shall be able to</p> <ol style="list-style-type: none"> <li>1. Explain the philosophy and art of environmental management systems</li> <li>2. Role of government in approving the projects and the laws to be enforced</li> <li>3. Apply the mechanism of EIA for Project Appraisal, Decision making and Implementation</li> <li>4. Suitable methods in handling the data collected during the EIA processes</li> <li>5. Possible impacts that could occur for physical, biological and human resources by the project</li> <li>6. A complete EIA report could be drafted</li> <li>7. Work as a professional member of a team conducting environmental assessments and auditing, and LCA</li> <li>8. To understand the difference between theory and practice for writing a EIA report</li> </ol>						
<b>Module: 1</b>	<b>Environmental Impact Assessment (EIA)</b>	<b>6 hours</b>				
EIA for Environmental Engineers–Environmental Impact Statement – Environmental Appraisal–Environmental Impact Factors.						
<b>Module: 2</b>	<b>EIA Legislation</b>	<b>6 hours</b>				
Criteria and Standards for Assessing Significant Impacts–Risk Assessment–Public Participation and Involvement.						
<b>Module: 3</b>	<b>EIA Process and Methods</b>	<b>9 hours</b>				
Criteria for the Selection of EIA Methodology–Screening–Scoping–Predictive Models for Impact Assessment–Mitigation, Monitoring, Auditing, Evaluation of Alternatives and Decision Making–Methods of Strategic Environmental Assessment. Environmental management plan.						
<b>Module: 4</b>	<b>Prediction and Assessment of Impacts on Physical Environment</b>	<b>6 hours</b>				
Geology –Soils – Minerals – Climate – Water Resources – Water Quality – Air Quality – Noise.						
<b>Module: 5</b>	<b>Prediction and Assessment of Impacts on Biological Environment</b>	<b>5 hours</b>				

Terrestrial Ecosystems – Wetland Ecosystems – Aquatic Ecosystems – Threatened and Endangered Species.			
<b>Module: 6</b>	<b>Prediction and Assessment of Impacts on Human Resources</b>	<b>6 hours</b>	
Demographics – Economics – Land Use – Infrastructure – Archaeological and Historic – Visual – safety.			
<b>Module: 7</b>	<b>EIA Case Studies</b>	<b>5 hours</b>	
Environmental Impact of Industrial Development – Management Requirements for the Preparation of EIA for industrial projects – Preparation of EIA of Land Clearing Projects – Assessment of Impacts of Traffic and Transportation – EMP			
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>	
<b>Total Lecture hours</b>			<b>45 hours</b>

CLE6013	OCCUPATIONAL HEALTH AND INDUSTRIAL SAFETY	L	T	P	J	C
		3	0	0	0	3
<b>Pre-requisite</b>	Nil	<b>Syllabus version</b>				
		<b>1.0</b>				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. Applying a very wide scholastic education to successfully lead, influence, and accomplish the safety goals and objectives of the industries.</li> <li>2. Effectively communicating and collaborating inside a different work environment</li> <li>3. Working in an ethical and professional ways inside the industry</li> </ol>						
<b>Expected Course Outcome:</b>						
Upon completion of this course, the student will be able to						
<ol style="list-style-type: none"> <li>1. Use techniques, skills, and modern scientific and technical tools necessary for professional practice of occupational safety and health;</li> <li>2. Identify and solve occupational safety and health problems;</li> <li>3. Understand professional and ethical responsibility in occupational safety and health;</li> <li>4. Design and conduct survey/investigations, as well as to analyse and interpret data in the field of occupational safety and health;</li> <li>5. Demonstrate knowledge of the contemporary issues surrounding occupational safety and health</li> </ol>						
<b>Module: 1</b>	<b>Introduction to Safety</b>	<b>5 hours</b>				
Occurrence of accident – sequence – injuries – occupational injuries – industrial accidents – key principles – OSH principles. Environmental management system (EMS)						
<b>Module: 2</b>	<b>Motivating safety and health</b>	<b>6 hours</b>				
Motivational environment – principles – self motivation – behavior based safety – Heinrich’s Domino concept – Benefits of lean and sustainability						
<b>Module: 3</b>	<b>Identification and Analysis of hazards</b>	<b>6 hours</b>				
Hazard identification – types – reporting system – audits – root cause analysis – job hazard analysis – risk versus cost. Life cycle analysis.						
<b>Module: 4</b>	<b>Occupational injuries and illness</b>	<b>8 hours</b>				
Bureau of labor statistics – occupational trauma death – injuries – injury and death cost – temperature extremes – ionizing radiation – noise induced hearing loss – vibrations – chemical hazards – flammable combustible liquids – biological monitoring						
<b>Module: 5</b>	<b>Industrial hygiene and ergonomics</b>	<b>7 hours</b>				
Occupational illness prevention – industrial modes of entry of contaminants – types of air contaminants – exposure monitoring – units of concentration – limits of exposure – ergonomic risk factors – physical work activities and conditions						
<b>Module: 6</b>	<b>Intervention, control and prevention of accidents</b>	<b>6 hours</b>				
Hazard prevention and control – elimination or substitution – awareness devices – personal protective equipment – safe operating procedures – fleet safety.						
<b>Module: 7</b>	<b>OSHA compliance</b>	<b>5hours</b>				
Standards – employer’s responsibilities – violations – medical and exposure records – employer liability – worker’s compensation						
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>				
<b>Total Lecture hours</b>						<b>45 hours</b>

<b>Text Book(s)</b>

CLE6022	URBAN PLANNING AND SUSTAINABILITY	L	T	P	J	C
		3	0	0	0	3
Pre-requisite	NIL	Syllabus version				
		1.1				
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To make students taking this course be able to understand about the project formulation for urban sustainability</li> <li>2. To be able to know the theories of urban planning</li> <li>3. To understand the impact of a plan to the environment</li> <li>4. To find effective methods of infrastructure planning</li> <li>5. To identify areas where Smart infrastructure and smart cities can be incorporated.</li> </ol>						
<b>Expected Course Outcome:</b>						
Upon completion of this course, the student will be able to:						
<ol style="list-style-type: none"> <li>1. Explain the aspects to be considered when planning a city</li> <li>2. Appreciate the impact of a plan on the environment</li> <li>3. Identify the factors that will by knowing existing theories of planning</li> <li>4. Prevent delays in project approval because of knowledge of the requirements of appropriate institutional bodies</li> <li>5. Relate various aspects of sustainable infrastructure and plan development</li> <li>6. Gain understanding of the various factors that affect the urban structure and develop effective transportation systems</li> <li>7. Understand requirements of smart city</li> <li>8. Be aware of practice of industry</li> </ol>						
<b>Module: 1</b>	<b>Introduction to City Planning</b>	<b>5 hours</b>				
Overview of planning from prehistory to current - Industrialization and the transformation of Urban Space - Detailed case studies of planned cities - Introduction of Remote sensing, GIS and GPS in urban planning. Smart City Planning.						
<b>Module: 2</b>	<b>Economy and Environment</b>	<b>8 hours</b>				
Indian cities and challenges involved in planning -Urban Renewal and Suburbanization - Downtown Redevelopment - Planning for Disaster risk reduction - Energy and Sustainability - Global Sustainability Issues and Climate Change - Concepts of EIA and LCA.						
<b>Module: 3</b>	<b>Planning Theories</b>	<b>5 hours</b>				
Theory of city form: normative models –cosmic, machine, organic; Concentric Zone Theory, Sector Theory, Multiple Nuclei Theory - Modes of planning -Land use and land value -Emerging Concepts and Environmental Planning.						
<b>Module: 4</b>	<b>Institutional Mechanisms</b>	<b>5 hours</b>				
Planning system in India and changes in institutional provisions over time - authorities and mechanisms for planning, implementation and evaluation - levels of hierarchy. Types of plans – master plans, development plans. Digital Data Integration with Sustainable Smart Cities.						
<b>Module: 5</b>	<b>Infrastructure Planning</b>	<b>8 hours</b>				
Critical issues in sustainable infrastructural planning- Concepts of basic needs, formation of objectives and standards - Data requirements for planning of urban networks and service - feasibility planning studies for structure, infrastructure systems. Technology for Sustainable Smart City Infrastructure. Recycling Technologies and Renewable energy.						
<b>Module: 6</b>	<b>Evaluation of Urban Structure</b>	<b>4 hours</b>				

Infrastructure and management -Sustainable Transportation systems and their types - design and operating characteristics - urban road hierarchy planning - criteria for road and junction improvements - arterial improvement techniques. Integrated inter-modal transport systems.			
<b>Module: 7</b>	<b>Smart Cities and Sustainable Development</b>		<b>8 hours</b>
Human development and sustainability - Rights of future generations -Climate Change and development - Leveraging recent technologies in enhancing urban living: internet of things (IoT) – Concept of smart cities.			
<b>Module: 8</b>	<b>Contemporary issues</b>		<b>2 hours</b>
<b>Total Lecture hours</b>			<b>45 hours</b>
