

SCHOOL OF CIVIL ENGINEERING

M. Tech. Structural Engineering

(M.Tech. MST)

Curriculum (2021-2022 admitted students)

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

- **World class Education**: Excellence in education, grounded in ethics and critical thinking, for improvement of life.
- **Cutting edge Research**: An innovation ecosystem to extend knowledge and solve critical problems.
- **Impactful People**: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF CIVIL ENGINEERING

• To be internationally recognized in Civil Engineering through groundbreaking contributions and exceptional leadership for sustainable development of the society.

MISSION STATEMENT OF THE SCHOOL OF CIVIL ENGINEERING

- To pioneer the emerging technology in Civil Engineering.
- To address the complex societal scale challenges in areas of resilient infrastructure, smart and sustainable cities, water and energy security, climate change, mobility of goods and people, and environmental protection.
- To inspire and nurture innovative leaders and entrepreneurs.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- 1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
- 2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
- 3. Graduates will function in their profession with social awareness and responsibility.
- 4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
- 5. Graduates will be successful in pursuing higher studies in engineering or management.
- 6. Graduates will pursue career paths in teaching or research.

PROGRAMME OUTCOMES (POs)

- PO_01: Having an ability to apply mathematics and science in engineering Applications
- PO_02: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment
- PO_03: Having an ability to design and conduct experiments, as well as to analyse and interpret data, and synthesis of information
- PO_04: Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice
- PO_05: Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems
- PO_06: Having adaptive thinking and adaptability in relation to environmental context and sustainable development
- PO_07: Having a clear understanding of professional and ethical responsibility
- PO_08: Having a good cognitive load management skills related to project management and finance

PROGRAMME SPECIFIC OUTCOMES (PSOs)

On completion of M. Tech. (Structural Engineering) programme, graduates will be able to

- PSO_01: Analyse and design reinforced concrete structures and steel structures as per the standard design of codes.
- PSO_02: Address the societal needs by interdisciplinary approach through advanced courses and get exposed to the latest technologies to be industry ready or to pursue advanced research.
- PSO_03: Independently carry out research / investigation to solve practical problems and write / present a substantial technical report / document.

MAT5005	Advanced Mathematical Methods	L 3	T 0	P .	J	<u>C</u> 3	
Pre-requisite	None	S	yllab	ous v	ers	sion	
Course Objective	es:						
1. Provide th	ne students with sufficient exposure to advanced mat	then	natica	al m	eth	ods	
and tools	that are relevant to engineering research.						
2. Improving	the computational skills of students by giving sufficient	cien	t kno	owle	dge	e of	
analytical	and numerical techniques useful for solving pr	oble	ems	arisi	ing	in	
Mechanic	al Engineering.						
3. Imparting	the knowledge of real time applications of Autonom	nous	syst	tems	, N	on-	
linear sys	tems of ordinary differential equations and partial diffe	rent	tial ec	quati	ons	s	
Expected Course	e Outcomes:						
At the end of the	course students are able to		1.0				
I. Distinguis	and analyse a variety of tools for solving linear system	ns a	nd fii	ndın	g		
eigenvalue	s of these systems.						
2. Derive and	use the numerical techniques needed for the solution of	of a	given	1			
engineerin	g problems						
3. Understand	and correlate the analytical and numerical methods						
4. Demonstra	te their ability to write coherent mathematical proofs and	nd s	cient	ific			
arguments	needed to communicate the results obtained from diff	erer	ntial e	equa	tior	1	
models.							
5. Demonstra	te the understanding of how physical phenomena are m	ode	lled	by p	arti	al	
differentia	equations						
Module:1 Eige	nvalue Problems		1	<u>5</u>	<u>ho</u>	urs	
Standard Eigen	value problems-Eigenvalues and Eigenvectors-G	ersc	chgor	1n (C1r	cles	
Module ? Iters	tion Methods			6	ho	lire	
Sturm sequence.	lacobi method. Given's method. Householder method.	Def	latior	<u>י</u> ו. La	ncz	<u>uis</u> zo's	
method.			lutioi	, <u> </u>	1102	10 0	
Module:3 Calc	ulus of Variations			9	ho	urs	
Euler-Lagrange's e	quation –Isoperimetric problems, Rayleigh–Ritz method - G	aler	kin m	netho	d.		
Module:4 Syst	em of First Order Ordinary Differential Equations			6	ho	iirs	
Linear Systems -	Homogeneous linear systems with constant coefficient	ents	- A	uton	om		
systems - Phase P	lane Phenomena - Critical Points - Stability for linear s	yste	ems.			.045	
Module:5 Non	linear systems			6	ho	urs	
Simple critical points of nonlinear systems-Stability by Liapunov's method – Non- Linear Mechanics: Conservative systems.							
Module:6 Part	ial Differential Equations			5	ho	urs	
Classification	of Second-Order Partial Differential Equations,	S	ignif	ïcan	ce	of	
characteristic cu	urves, Canonical Form, Sturm-Liouville problems a	nd	Eige	n fu	inci	tion	
expansions.	expansions.						
Module:7 Way	e equation			6	ho	urs	

Displacements in a long string – a long string under its weight – a bar with prescribed force on one end – free vibrations of a string. Method of Separation of variables, Solution by method of Laplace transforms

ENG5001	Fundamentals of Communication Skills	L T P J C 0 0 2 0 1					
Pre-requisite	Not cleared EPT (English Proficiency Test)	Syllabus version					
		v. 1.0					
Course Objective							
1. To enable learn	ers learn basic communication skills - Listening, Speaking, Re	eading and Writing					
2. To help learner	s apply effective communication in social and academic conte	ext					
3. To make studer	ts comprehend complex English language through listening a	nd reading					
Expected Course	Outcome:						
1. Enhance the lis	tening and comprehension skills of the learners						
2.Acquire speakir	g skills to express their thoughts freely and fluently						
3.Learn strategies	for effective reading						
4.Write grammati	cally correct sentences in general and academic writing						
5. Develop techni	cal writing skills like writing instructions, transcoding etc.,						
Module:1 Liste	ning	8 hours					
Understanding Co	nversation, Listening to Speeches, Listening for Specific Information	mation					
Module:2 Spea	king	4 hours					
Exchanging Infor	nation, Describing Activities, Events and Quantity						
Module:3 Read	ling	6 hours					
Identifying Inform	nation, Inferring Meaning, Interpreting text						
Module:4 Writ	ng: Sentence	8hours					
Basic Sentence St	ructure,Connectives,Transformation of Sentences,Synthesis o	f Sentences					
Module:5 Writ	ng: Discourse	4hours					
Instructions, Para	graph, Transcoding						
	Total Lecture hours	30 hours					
Text Book(s)

FRE5001	FRANCAIS FONCTIONNEL	L T P J C 2 0 0 0 2
Pre-requisite	Nil	Syllabus version
		v.1
Course Objectives		
The course gives str	idents the necessary background to:	
1. Demonstrat	e competence in reading, writing, and speaking basic French, inclu	ding knowledge of
vocabulary	(related to profession, emotions, food, workplace, sports/hobbies, c	classroom and
family).		
2. Achieve pr	officiency in French culture oriented view point.	
Expected Course (Jutcome:	
The students will be	able to	1
1. Remember	the daily life communicative situations via personal pronouns, emp	hatic pronouns,
2 Create com	negations, interlogations etc. municative skill effectively in French language via regular / irregul	ar verbe
3 Demonstrat	e comprehension of the spoken / written language in translating sin	an veros.
4. Understand	and demonstrate the comprehension of some particular new range	of unseen written
materials.		
5. Demonstrat	e a clear understanding of the French culture through the language	studied.
Module:1 Salue	r, Se présenter, Etablir des contacts	3 hours
Les Salutations, Le	s nombres (1-100), Les jours de la semaine, Les mois de l'année,	Les Pronoms Sujets,
Les Pronoms Tonic	ues, La conjugaison des verbes réguliers, La conjugaison des verb	es irréguliers- avoir /
être / aller / venir / t	aire etc.	
		-
Module:2 Prése	enter quelqu'un, Chercher un(e) correspondant(e), Demander	3 hours
Le coniugaican das	ouvelles d'une personne.	
La conjugaison des	verbes Pronominaux, La Negation,	
Modulo:3 Situa	r un objet ou un lieu. Poser des questions	1 hours
L'article (défini/ in	léfini) Les prénositions (à/en/au/aux/sur/dans/avec etc.) L'article.	contracté Les heures
en français. La Na	tionalité du Pays, L'adjectif (La Couleur, l'adjectif possessif, l'a	diectif démonstratif/
l'adjectif interrogat	if (quel/quelles/quelle/quelles). L'accord des adjectifs avec le	nom. L'interrogation
avec Comment/ Co	nbien / Où etc	
Module:4 Faire	des achats, Comprendre un texte court, Demander et	6 hours
indig	uer le chemin.	
La traduction simpl	e :(français-anglais / anglais –français)	
Module:5 Trou	ver les questions, Répondre aux questions générales en	5 hours
franç	ais.	
L'article Partitif, N	lettez les phrases aux pluriels, Faites une phrase avec les mots d	lonnés, Exprimez les
phrases données au	Masculin ou Féminin, Associez les phrases.	
Module:6 Com	ment ecrire un passage	3 hours
Decrivez :		
La Famille /La Mai	son, /L universite /Les Loisirs/ La vie quotidienne etc.	1 hours
Dialogue:	nent ecrire un utatogue	4 110015
a) Réserver un	billet de train	
h) Entre deux	amis qui se rencontrent au café	
c) Parmi les m	embres de la famille	
d) Entre le cli	ent et le médecin	
,

CLE5001	THEORY OF ELASTICITY AND PLASTICITY	L T P J C							
Pro-roquisito		3 0 0 0 3							
110-10quisite		1 1							
Course Objectives:		1.1							
1. To Analyse the stresses and strains for two dimensional and three dimensional elements									
2. To Understand the equilibrium and compatibility condition									
3. To Understand the	e compatibility conditions in polar coordinates								
4. To Solve the prob	lems on Torsion for different shaped bars								
5. To Understand the	e concept of plasticity								
Expected Course O	utcome:								
At the end of the cours	se, the student will be able to								
1. Analyse the stress	ses and strains for elasticity approach.								
2. Solve two dimens	sional elements problems in Cartesian coordinates								
3. Understand the b	ending of cantilever beams and circular arc beams								
4. Know the 3D pro	blems in Cartesian coordinates								
5. Understand the co	ompatibility conditions in polar coordinates								
6. Solve the problem	ns on Torsion for different shaped bars.								
7. Understand the co	oncept of plastic analysis and yield criteria.								
Module: 1 Elasti	city	6 hours							
Analysis of Stress ar	ad Strain - Elasticity approach – Definition and notation of $\frac{1}{2}$	stress – Components							
of stress and strain –	Generalized Hooke's law								
Module: 2 Elasti	city Solutions	5 hours							
Plane stress and pla	ain strain problems with practical examples - Equation	s of equilibrium and							
Coordinates	tions in Cartesian coordinates – Two dimensional Pr	oblems in Cartesian							
Module: 3 Carte	sian Coordinates	6 hours							
Airy's stress function	n - Bending of cantilever beams- Axi-symmetrical probl	ems - Thick cylinder							
under uniform press	are - Circular arc beams subjected to pure bending.								
Module: 4 Elasti	city 3D Solution	8 hours							
Principal stresses a	nd strains for three dimensional element - Equations	of equilibrium and							
compatibility conditi	ions for 3D problems in Cartesian co-ordinates - Transform	nation of stresses and							
strains.									
Module: 5 Polar	Co-ordinates	6 hours							
Equations of equilibrium	rium and compatibility conditions in Polar coordinates- A	xi-symmetrical							
problems-bending of	curved bars								
Module: 6 Torsi	on-Non-Circular Sections	6 hours							
Torsion - Torsion of	f various shaped bars - Pure torsion of prismatic bars - I	randtle's membrane							
analogy - Torsion of	thin walled tubes and hollow shafts								
Module: 7 Plasti	city and Theory of Failure	<u>6 hours</u>							
Introduction to plas Venant'stheory – Vo	sticity – Stress – Strain diagram – Plastic analysis – on mises criterion – Plastic work – Strain hardening	Yield criteria – St.							
Module:8 Cont	emporary issues:	2 hours							
	Total Lecture hours	45 hours

CLE5003	STRUCTURAL DYNAMICS	L T P J C
Pro-roquisito	Nil	Syllabus version
11c-requisite		1 1
Course Objective	S:	1.1
1. To know variou	s dynamic forces acting on a building and their response.	
2. To obtain know	ledge on modes of failure and remedial solutions.	
3. To study the ana	alysis procedure for calculating the response of structures.	
4. To understand t	he linear and no-linear behaviour of structures.	
Expected Course	Outcome:	
Upon completion	of this course, the student will be able to	
1. Differentiate static and dynamic behavior of structures and their physical properties.		
2. Identify and m	odel a single degree of freedom system subjected to dynam	nic load.
3. Evaluate the re	esponse of single storied building subjected to dynamic load	d.
4. Identify and m	odel a multi degree of freedom system subjected to dynam	ic load.
5. Evaluate the re	sponse of multi-storied building subjected to dynamic load	l.
6. Evaluate the d	ynamic behavior of beams.	
7. Describe the n	onlinearity of a system by various techniques.	
Module:1 Intro	duction	<u>6 hours</u>
History of vibratic	n - Dynamic analysis and their importance to structural en	gineering problems -
Degrees of freedo	m - D'Alembert's principle - Lagrange's equation - Simple	harmonic motion.
Module:2 Singl	e Degree of Freedom	6 hours
Mathematical mod	lel for SDOF systems - Free vibration - Undamped - Damp	bed - Critical damping -
Measurement of d	amping - vibration measuring instruments.	(having
Nodule:3 Kesp	Onse of SDOF Systems	0 NOULS
Transmissibility	F system to Harmonic Loading, Periodic loading and Equiparties Dubamel's integral. Numerical integration	id impulse Loading -
Module: 4 Mult	i Dograe of Freedom System	7 hours
Equation of motion	on - Free vibration - Undamped - Damped - Evaluation	of structural property
matrices - Mode s	ane - Orthogonality relationshin	f of structural property
Module:5 Resp	onse of MDOF Systems	6 hours
Rayleigh's method	1 - Rayleigh-Ritz method - Stodola's method - Stiffness me	thod - Mode
superposition met	nod.	
Module:6 Cont	inuous Systems	6 hours
Differential equati	on of motion - Transverse vibration - Axial vibration - Nat	ural frequency and
mode shape of sin	ple beams with different end conditions – Variable cross s	ection beams -
Orthogonality rela	tionship.	
Module:7 Non-	linear Numerical Techniques	6 hours
Wilson Theta met	nod - Newmark Beta method –Runge-Kutta method.	
Module:8 Con	temporary issues:	2 hours
	Total Lecture hours	45 hours
	Tutorial Hours	30 hours
Minimum of three problems to be worked out by students in every tutorial class.

CLE6015	ADVANCED DESIGN OF STEEL STRUCTURES	
Pre-requisite	CLE5002 Design of Concrete Structural Systems	2 2 0 4 4 Syllabus version
	Chilloud Design of Concrete Structural Systems	1.1
Course Objectives	· · · · · · · · · · · · · · · · · · ·	
1. To classify the	structures and analyse the frame for wind loads.	
2. To design the v	velded connections and to give exposure to fatigue.	
3. To design light	gauge steel members, steel - concrete composite and hollow	v sections.
Expected Course	Outcome:	
Upon completion of	f this course, the student will be able to	
1. Classify the str	uctures and wind load analysis for frames.	
2. Design the wel	ded connections.	
3. Understand the	fatigue and the factors that influence fatigue.	
4. Analyse and de	sign the beams and frames using plastic method.	
5. Design the Lig	nt gauge structures.	
6. Design the Stee	el- Concrete Composite sections.	
7. Design the Hol	low sections.	
Module:1 Stabi	ity and Plate Buckling	4 hours
Classification of st	ructures-wind load analysis	1
Module:2 Beam	- column Connections/Semi Rigid Connections	4 hours
Throat and Root S	tresses in Fillet Welds - Seated Connections Unstiffened a	nd Stiffened seated
Connections – Mor	nent Resistant Connections – Clip angle Connections – Split	beam Connections
– Framed Connecti	ons	
Modular Fation		4 1

CLE5012	DESIGN OF BRIDGES	L T P J C
D	N 121	2 0 0 4 3
Pre-requisite		Sylladus version
Course Objecti	¥05.	1.0
1 To understa	ad the basic concept of design of bridges	
2 To analyseb	ox culvert	
3. To design T	and I girders	
4. To analyse a	nd design cable staved and suspension bridges	
5. To design pi	ers and abutments	
6. To design pi	le foundation and bearings	
Expected Cour	se Outcome:	
Upon completio	n of this course, the student will be able to	
1. Classify the	different types of bridges.	
2. Analyse box	culvert and girder bridges by using different method.	
3. Design T gir	ders, I girders and Box girder bridges by IRC method.	
4. Analyse and	design cable stayed and suspension bridges	
5. Design piers	and abutments	
6. Design pile	foundation	
7. Design bear	ings and expansion joints.	
Module:1 Ge	neral	3 hours
Definition, Histo	bry, Different types (Permanent/Temporary), Classification based	on material, span,
structural form e	etc.,.Field Surveys and selection of site	1 h a
IDC loadings	age Deck Analysis	4 nours
bridges by IPC	Transfer the second to bridge loading worldwide- Analysis of box	of girder bridges by
Courbon's meth	and and Grillage method - Introduction to other methods of	analysis like Finite
element Finite	strin method etc	anarysis like I lille
Module:3 De	sign of Small Bridges & Culverts	5 hours
Design of box c	ulverts, short span slab decks in square & skew - Design of T & I	girder and
Introduction to 1	Box girder bridges by IRC method.	Bridder dild
Module:4 Lo	ng span & Special type bridges	4 hours
Analysis & des	sign principles of continuous bridges, arch bridges, integral b	ridges, cable stayed
bridges and susp	pension bridges.	
Module:5 Des	sign of Substructure	4 hours
Design of piers	& abutments -Introduction to wing walls & returns and Reinforc	ed Earth in flyover
approaches.		
Module:6 Des	sign Foundations	4 hours
Pile, Pile cap a	nd well foundation	
Module 7 Bri	dge Appurtenances	4 hours
Design of Bearing	ngs, Expansion joints, Deck drainage, Crash barriers & handrails.	
Module:8 Co	ontemporary issues	2 hours
	Total Lecture hours	30 hours
	Sample list of projects for J components	60 hours
1. Detailed	design of any one type of bridge (RCC, prestressed, compo	osite and steel) with
detailed	drawings.	
2. Working	model of bridge including all the structural elements.	

- 3. Detailed report of bridge construction activities (minimum 10 days in site training)
- 4. Industrial visit visit to existing bridge location to understand various components of bridge, occurrence of scour etc., and new bridge construction sites.
- 5. Use of software like STAAD Pro and/or equivalent general purpose software for bridge deck analysis, Development of spread sheets for design of pier, abutment, bearing etc

CLE6001	CLE6001 ADVANCED CONCRETE MATERIALS AND	L	Т	Р	J	С		
	TECHNOLOGY	2	0	0	4	3		
Pre-requisite	Nil	S	yllab	us v	ersio	on		
•						1.0		
Course Objective								
1. To study the	he roles of concrete constituent materials, the requirements a	nd p	ropei	ties	of th	ne		
materials a	materials and their effects on concrete.							
2. To underst	and the behaviour of fresh and hardened of concrete with an	d wi	thout					
admixtures	S.							
5. To study the 4 To study the 4	he machanical properties and durability of concrete							
4. To study the	he testing procedure of different non destructive testing meth	ode						
6 To study th	he different types of special concrete and concreting methods	ious.						
Expected Course	Outcome:							
Upon completion	of this course, the student will be able to							
1. Identify an	ad explain the role of ingredients of concrete and their effect	on c	oncre	ete				
properties.								
2. Explain the	e behaviour of fresh and hardened properties of concrete.							
3. Design of	concrete mix using different methods.							
4. Apply the	destructive and non-destructive testing methods to assess the	e har	dene	d pr	oper	ties		
of concrete	2.							
5. Describe to	esting procedures for durability properties of concrete.							
6. Explain the	e different types of special concretes							
Module:1 Con	crete Materials and Admixtures		4	hou	rs			
Cement, Fine and	Coarse aggregates –Mineral and Chemical Admixtures – Pro	opert	ies a	nd				
applications.								
Module:2 Beha	aviour of Fresh Concrete and Hardened Concrete		4	hou	rs			
Behaviour of Con	crete with and without admixtures - Modern trends in conc	rete	manı	ifact	ure a	and		
placement technic	ques - Ready mix concrete - Rheological behaviour of	tres	sh co	oncr	ete a	and		
hardened concrete			4	1				
Module:3 Con	crete Mix Design	1	4	nou	rs 1			
Methods of mix d	esign-Design of concrete mixes by using 15 code method and	1 AC	<u>_1 me</u>		1

CLE6002	ADVANCED FOUNDATION DESIGN	L T P J		J	C	
		<u> </u>	U 7llah	U US V	U orsic	<u> </u>
Pre-requisite	e Nil		mau	us v		<u>, 1.1</u>
Course Obje	ctives:					
To im	part the knowledge in the area of analysis and design of foundati	ons a	and e	arth		
retain	ing structures.					
Expected Co	urse Outcome:					
Upon comple	tion of this course, the student will be able to:					
1. Estim	ate bearing capacity of raft foundation					
2. Deter	mine safe load carrying capacity of pile for a given site condition					
3. Desig	h a reinforced earth wall and analyse its stability					
4. Allaly 5 Distin	guish f piled-raft and load sharing between raft and pile					
6 Evalu	ate stability of well foundation					
7 Identi	fy suitable type of cofferdam for a given construction problem					
Module:1	Raft Foundations		6	hour	:s	
Bearing capa	city of rafts; Rafts on clays and sands; Compensated raft; Flexib	le an	d rig	id ra	fts (IS:
2950); Settler	nent analysis of rafts (under embankment loading).					
Module:2	Pile Foundations		7	houi	S	
Load capacit Uplift capacit	y of piles in sands and clays; α - method; Brom's analysis; Laty of piles; Pile group capacity; Pile load test. Analysis of stress v	atera vave	lly lo s in p	bade bile c	d pil Irivii	les; ng.
Module:3	Piled Rafts		7	houi	•S	
Concept of	a piled raft - Examples, definitions and terminology; Piled	raft	as a	cor	npos	site
construction;	Advantages of piled rafts; Performance and design of a piled ra	ıft; S	teps	invo	lved	l in
piled raft desi	gn.					
Module:4	Well Foundations		6	houi	•S	
Well Founda	tions - Types of wells or caissons - Drilled shafts and cai	sson	s -	Desi	gn a	and
Module:5	Deep Excavation Protection Systems		6	houi	·s	
Sheeting and	bracing systems in shallow and deep open cuts in different so	il tv	nes .	- Ca	ntile	ver
sheet piles, A	nchored sheet piles; Stability and design of braced supports. Dia	<u>ohrag</u>	gm w	alls	intile	ver
Module:6	Coffer Dams		5	houi	'S	
Types of Cof	fer dams, merits and demerits; Design of single wall coffer dam	s; St	abili	ty as	pect	s,
I VA methou			=			
			3		1	1
Advantages of external stabi	DI KE walls, Benaviour of RE walls, Soil-reinforcement inter lity conditions; Field applications of RE walls.	ractio	on; I	nteri	hal a	ind

		J S	vllah	U UIS V	versi	on J	
Pre-requisit	e Nil	<u> </u>	y max		CISI	1.1	
Course Obje	ctives:						
1. To im 2. To un 2. To un	part broad knowledge in the area of repair and rehabilitation of structures derstand about various causes of deterioration of structures	ıctuı	es				
5. 10 00 4. To un	derstand the properties of repair materials						
5. To kn	ow various repair techniques and strengthening methods						
Expected Co	urse Outcome:						
Upon comple	tion of this course, the student will be able to						
1. Identi:	fy the role of the maintenance engineer						
2. Under	stand the causes of deterioration of structures						
3. Identi							
4. Apply							
5. Evalua	ate various properties and applications of repair materials						
6. Assess							
7. Apply							
Module:1	Introduction	5 hours					
Importance of	f maintenance - Types of maintenance - Decay of structures- Rol	le of	the	Mai	ntena	ince	
Engineer - Qu	ality Assurance for concrete construction - Design and construction	on er	rors.				
Module:2	Deterioration of Structures	6 hours					
Causes of de	terioration of concrete, steel, masonry and timber structures - s	urfa	ce de	eterio	oratio	on -	
efflorescence	- Causes and preventive measures.						
Module:3	Corrosion of Structures		6	hou	rs		
Corrosion me	chanism - Effects of cover thickness and cracking - Methods of c	corre	sion	prot	tectio	on –	
Inhibitors - C	oatings - Cathodic protection for reinforcements.						
Module:4	Inspection and Assessment of Distressed structures		6	hou	rs		
Visual inspec	ction – Non-destructive tests –Ultrasonic pulse velocity method	– ł	Rebo	und	ham	mer	
	Material for Descio		(1			
Module:5	Materials for Repair		0	hou	rs		
Special concr	etes and mortar - Concrete chemicals - Special elements for accel	lerate	ed st	reng	th ga	in -	
Expansive ce	ment- Polymer concrete – Ferro cement, Fibre reinforced concre	ete -	Fib	re re	info	ced	
plastics.		1					
Module:6	Techniques for Repair		6	hou	rs		
Techniques for	or repairing of spalling and disintegration of structures - Grouting	-Aut	oger	lous	heal	ing-	
Pre-packed co	oncrete- Protective surface coating.						
Module:7	Strengthening of distressed buildings		6	hou	rs		
Repairs to ov	ercome low member strength – Deflection - Chemical disruption Marine exposure- Use of FRP- NDT tests	1 - W	/eath	erin	g we	ar -	
Module:8	Contemporary issues		4	hou	rs		
	Total Lecture hours		45	5 hoi	irs

CLE601'	CLE6017 EARTHOUAKE RESISTANT DESIGN			Т	Р	J	С	
	,		2	0	0	4	3	
Pre-requis	site	CLE5003 Structural Dynamics	Sy	yllab	us v	ersio	on	
-							1.1	
Course Obje	ectives:							
 To study the basic concepts of engineering seismology and ground motion characteristics. To understand the strength and capacity design principles of earthquake resistant design. To study the behavior of various types of buildings under static and dynamic forces. To study the elastic and inelastic deformations and significance of ductility in beam-column joints. To study the seismic behavior of masonry and concrete shear wall systems. To study the significance of energy dissipating devices in seismic resistant design. Expected Course Outcome: Upon completion of this course, the student will be able to Identify the characteristics of seismic waves and its measures. Understand the principles of earthquake resistant design and response spectrum. Analyze and design the various types of structures under static and dynamic loading conditions. Design various beam-column joints as per ductility requirements. Analyze and design unreinforced and reinforced masonry and concrete shear wall structures. Explain the types of dampers and base isolation systems and its importance in seismic 								
Module:1	Seism	ology and Earthquake		6	hou	rs		
Internal struc seismic wave India, Seismi	ture of es and clic hazar	the earth, continental drift and plate tectonics, Faults, Elast haracteristics, earthquake size, strong ground motion, seism d assessment.	ic rel	ooun oning	d the g ma	ory, p of		
Module:2	Princ	iples of Earthquake Resistant Design		3	hou	rs		
Seismic desig Application Principles - D	gn philo of resp Design c	osophy - Principles of earthquake resistant design - Respon- bonse spectrum theory to seismic design of structures criteria for strength - Stiffness and ductility.	ise sj -Caj	pectr pacit	um 1 y -	heoi Des	ry - ign	
Module:3	Seism	ic Analysis of Moment Resisting Frames		5	hou	rs		
Determinatio analysis proc	on of de cedure. I	sign lateral forces as per IS: 1893-2016 – equivalent stati Effect of infill stiffness on analysis of frames – Equivalent of	ic for diago	rce a	nd d strut	ynar	nic	
Module:4	Mode	lling, Analysis and Design of Structures		3	hou	rs		
Seismic ana equivalent s	lysis an static, re	d design of RC structures using software - static and dynamesponse spectrum and time history methods.	nic n	netho	ods –			
Module:5	Desig	n of Beam Column Junctions		5	hou	rs		
Elastic and I and flexural per IS: 1392	Elastic and Inelastic deformations of structures – ductility of the composite system - design of axial and flexural members – beam column junction detailing – strong column - weak beam effects as per IS: 13920: 2016.							

Module:6	Design of Shear Walls				3 hours
Unreinforc	ed and reinforced masonry	shear walls – a	analysis and des	sign of rein	forced concrete
shear walls					
Module:7	Vibration Control Tec	chniques			3 hours
Vibration co	ontrol – energy dissipating	devices – pri	nciples and app	olication, b	basic concept of base
isolation – v	arious systems - case studi	es.		[
Module:8	Contemporary issues				2 hours
	Total Lecture	hours			30 hours
	Sample List of Projects f	or J Compone	ent		
1. Comparis	on of inter storey drift of n	ulti-storied bu	ilding		
using line	ar static and dynamic meth	ods			
2. Determine drift	e the effect of infill stiffnes	s on reduction	of inter storey		
3. Analysis	and design of regular/irregu	ılar buildings			
considerin	ng strong column-weak bea	m criteria (line	ear static /		
dynamic)				-

CLE6018	APPLICATION OF NUMERICAL METHODS IN	L	Т	Р	J	С
	SIRUCIURAL ENGINEERING	2	2	0	0	3
Pre-requisite	MAT5005 Advanced Mathematical Methods	S	yllab	us v	ersi	0 n
Course Obje	ctives:					1.1
1. To ap	ply the numerical techniques for different structural elements					
2. To stu	dy the different numerical procedures for calculating the response	e of s	truct	ures		
3. To lea	rn the analysis of frames, slabs for deflection					
4. To stu	dy the finite element and Trapezoidal and Simpson's rule.					
5. To ap	ply the concepts of numerical methods.					
6. To eva	aluate stability and analysis of plate.					
Expected Co	urse Outcome:					
Upon comple	tion of this course, the student will be able to					
1. Under	stand the concepts of numerical techniques to structural elements.					
2. Analy	ze the frame member.					
3. Under	stand the concepts of finite difference and finite strip method					
4. Evalua	ate the slope and deflection of the members					
5. Analy	ze the bending moment, shear and deflection of beam.					
6. Apply	numerical method in structural members	<u> </u>	5	harr		
Nodule:1	Solutions of Simultaneous Equations		5	nou	rs	
Solution of si	mutaneous equations – Bending moment - Stope and deflection in	n bea	ums.	hou	MG	
Membrane an	alogy using finite difference method for slabs-slope and deflection	n of	4 1940	nou	15	
Module·3	Numerical Methods – I		<u>1405</u>	hou	rs	
Numerical in	tegration (Tranezoidal and Simpson's rule) for determining	she	ar n	nom	ent	and
deflection in l	beams– Gauss Quadrature formula.	5110	, 1		•110	unu
Module:4	Numerical Methods - II		4	hou	rs	
Newmark's n beams.	nethod – Determination of shear force - Bending moment - Slo	ope a	and o	lefle	ctior	ı in
Module:5	Eigen Values Problems		5	hou	rs	
Evaluation o	f Eigen values for stability problems- Evaluation of Eigen vectors	for	stabi	lity		
problems.						
Module:6	Boundary Elements and Discrete Element Methods		3	hou	rs	
Boundary El	ements for plates					
Module:7	Finite Strip Method		3	hou	rs	
Finite Strip m	ethod for analysis of plates.	1				
Module:8	Contemporary issues		2	hou	rs	
	Total Lecture hours		30) hot	irs	
	Tutorial		30) hot	irs	
	Minimum of 2 Problems to be worked out by Students					
	in Every Tutorial Class					
	Another 2 Problems to be given as Home Work.

CLE6019		THEORY AND DESIGN OF PLATES AND SHELLS	L 2	T 2	P 0	J 0	C 3	
			S	z Vllab	us v	ersia	<u>)</u> n	
Pre-requisite	e	CLE5001 Theory of Elasticity and Plasticity	~,				1.1	
Course Obje	ectives							
1. To un	Idersta	nd the behaviour of thin plates under bending						
2. To stu	2. To study the different solution techniques of rectangular thin plates							
3. To un	3. To understand the numerical techniques for the analysis of plates							
4. To kn	now the	e structural behaviour of folded plates						
5. To ob	otain k	nowledge on the behaviour of shells						
6. To un	Idersta	nd the analysis techniques of different types of shells						
Expected Co	ourse	Outcome:						
Upon comple	etion o	f this course, the student will be able to						
1. Devel	lop and	d solve differential equation of thin plates subjected to flex	ure					
2. Analy	/ze rec	tangular plates using Navier's and Levy's method						
3. Analy	/se pla	ates by using finite difference method						
4. Identi	ify the	structural behaviour of folded plates						
5. Differ	rentiat	e various types of shells based on structural behaviour						
6. Analy	/se and	l design different types of shells						
7. Deter	mine 1	nembrane behaviour of shells	1					
Module:1 Introduction			4	hou	rs			
Laterally load	ded thi	n plates – Differential equation – Boundary conditions. Be	ndin	g of	plate	s		
Module:2	Ana	ysis of Plates - I	4 hours					
Simply support	orted 1 edge c	ectangular plates – Navier's solution and Levy's method onditions.	- Re	ectan	gula	r pla	ites	
Module:3	Ana	ysis of Plates - II		4	hou	rs		
Symmetrical rectangular p	bendi lates.	ng of circular plates – Finite difference method for an	alysi	s of	squ	are a	and	
Module:4	Fold	ed Plates		4	hou	rs		
Introduction	of fold	led plate structures – Structural behavior – Various types						
Module:5	Shel	ls		4	hou	rs		
Introduction	ı - Typ	es of shells – Structural action – Membrane theory – Limit	atior	ıs				
Module:6	Ana	ysis and Design of Shells - I		5	hou	rs		
Beam metho	od of a	nalysis. Analysis and design of doubly curved shells – Elli	ptic	parat	oloi	d		
Module:7	Ana	ysis of Shells - II		3	hou	rs		
Conoid and h	nyperb	olic paraboloid roofs.						
Module:8	Cor	ntemporary issues	2 hours

CLE6020	ANALYSIS AND DESIGN OF TALL STRUCTURES	L	T	P	J	C
		2 	0 /llab	U US V	4 ersio	<u>3</u> 00
Pre-requisite	CLE6015 Advanced Design of Steel Structures	5	mao		CISIC	1.0
Course Objectives:						1.0
1. To understar	nd the behaviour of tall structures subjected to dynamic loads					
2. To study the	behaviour of different types of tall structural systems					
Expected Course C	Expected Course Outcome:					
Upon completion of	this course, the student will be able to					
1. Analyse the	tall structure for gravity and lateral loads					
2. Evaluate the	e structural systems in tall buildings					
3. Understand t	the behaviour of various structural systems under gravity and la	atera	I loa	ling		
4. Examine diff	terent types of outrigger system					
5. Understand	snear wall systems					
7 Examina the	importance of infined frames					
7. Examine un Module:1 Type	s of Buildings and Loads Calculations		5	hom	*6	
Classification of bui	ildings according to NBC – Wind load – Seismic load – Quasi	stati	c an	nou	h_	
combination of load	ing	stati	c ap	proa	-11-	
Module:2 Rigid	l frame		4	houi	ſS	
Rigid frame behavi	our- analysis of gravity loading-Substitute frame method fo	or dead load and live				
loads- analysis of	horizontal loading- Portal - Cantilever and factor method	s –	Kan	i's r	neth	od-
Equivalent frame me	ethod- Diaphragm openings					
Module:3 Brace	ed Frame		4	hou	ſS	
Types of bracing- be	ehaviour of bracing- methods of analysis- member force analys	sis- d	rift	anal	ysis	
Module:4 Core	and Outrigger System		4	hou	ſS	
Behaviour- optimur systems	n location of single outrigger- optimum location of two ou	ıtrigg	ger- 1	fram	ed ti	ıbe
Module:5 Shear	r Wall System		5	hou	ſS	
Behaviour and analy	ysis of shear wall- coupled shear wall					
Module:6 In-fil	led Frame Systems		3	hou	ſS	
Importance – Meth	ods of analysis – Equivalent truss and frame method – Force-d	lispla	acem	ent		
Modulo:7 Three	Dimonsional Analysis		2	hom	•0	
Desis mineirles C	e Dimensional Analysis		3	liou	S	
Basic principles – C	entre of rotation of a rigid floor, Force displacement method		•			
Module:8 Con	temporary issues		<u></u>	noui	rs.	
	Total Lecture hours		30	hou	rs	
S	ample List of Projects for J Component					
1. Comparative st loading	tudy of conventional and core-outrigger structure under wind					
2. Investigation o	f efficient bracing system as per IS 800:2007.		~~			
3. Effect of conce	entric and eccentric type of bracings on performance based		60	hou	rs	
4. Analysis of rei	nforced concrete tall building with different arrangement of					

5.	concrete and steel bracing system Analysis and design of diagrid stru	uctural system for	high rise s	teel buildings

CLE6022	URBAN PLANNING AND SUSTAINABILITY	L T P J 3 0 0 0		J O	C 3				
		S	v Ilab	us v	ersia	on J			
Pre-requisite	CLE6015 Advanced Design of Steel Structures	5,	nab		CIBR	1.1			
Course Objectives	5:	 							
1. To understa	and about the project formulation for urban sustainability								
2. To be able t	2. To be able to know the theories of urban planning								
3. To understand the impact of a plan to the environment									
4. To find effe	4. To find effective methods of infrastructure planning								
5. To identify	areas where smart infrastructure and smart cities can be inco	rpor	ated.						
Expected Course	Outcome:								
Upon completion of	of this course, the student will be able to:								
1. Explain the	aspects to be considered when planning a city								
2. Examine th	e impact of a plan on the environment								
3. Identify the	factors of existing theories of planning								
4. Understand	the requirements of institutional bodies								
5. Apply varie	bus aspects of sustainable infrastructure and plan developmer	nt							
6. Evaluate the	e various factors that affect the urban structure								
7. Understand	requirements of smart city	1							
Module:1 Intr	oduction to City Planning				<u>5 ho</u>	urs			
Overview of plann	ing from prehistory to current - Industrialization and the tran	storn	natio	n of	Urb	an			
Space - Detailed ca	ase studies of planned cities - Introduction of Remote sensing	, GĽ	s and	I GP	S 111				
Madular2 East	nant City Planning.				2 ho	1100			
Indian cities and ch	holling and Environment	nizat	ion	Dor	vnto	uis			
Redevelopment -	Planning for Disaster risk reduction - Energy and Sub	ustai	nahil	itv	-Glo	bal			
Sustainability Issue	es and Climate Change - Concepts of EIA and LCA.	astan	luon	ny	010	oui			
Module:3 Plan	uning Theories				5 ho	urs			
Theory of city forn	n: normative models –cosmic, machine, organic; Concentric	Zone	The	ory,	Sect	tor			
Theory, Multiple N	Suclei Theory - Modes of planning -Land use and land value	-Em	ergin	g Ċo	once	pts			
and Environmental	Planning.	_							
Module:4 Insti	itutional Mechanisms				5 ho	urs			
Planning system in	India and changes in institutional provisions over time - aut	horit	ies ai	nd					
mechanisms for pla	anning, implementation and evaluation - levels of hierarchy.	Туре	es of	plan	s –				
master plans, devel	lopment plans. Digital Data Integration with Sustainable Sma	art Ci	ities.						
Module:5 Infra	astructure Planning	<u> </u>			s ho	urs			
Critical issues in su	istainable infrastructural planning- Concepts of basic needs,	form	ation	l of	•1 •	1.			
objectives and stan	dards - Data requirements for planning of urban networks an	d sei	vice	- fea	ISIDI	lity			
praiming studies to	i suuciure, initastructure systems. Technology for Sustainab	ie Sľ	nart	City					
Module-6 Evol	luation of Urban Structure			,	1 ho	iire			
Infrastructure and	management -Sustainable Transportation systems and their t	tynes	- de	sion	and	u1 5			
operating characte	eristics - urban road hierarchy planning - criteria for road and	inna	tion	JIGH	anu				
improvements - a	rterial improvement techniques. Integrated inter-modal transi	ort s	syste	ms.					
Module:7 Sma	rt Cities and Sustainable Development				8 ho	urs			

Human development and sustainability - Rights of future generations -Climate Change and development - Leveraging recent technologies in enhancing urban living: internet of things (IoT) - Concept of smart cities.

CLE6024	ENERGY EFFICIENT BUILDINGS		Т	P	J	С		
		3	0	0	0	3		
Pre-requisite	Nil	Sy	yllab	us v	ersio)n 1 1		
Course Objective	s:					1.1		
1. To underst	and the concept of reduction in energy consumption through l	low e	energ	gy bu	ildir	ng		
design			-	•		-		
2. To Underst	2. To Understand the sources of Renewable Energy							
3. To Highlig	ht strategies to integrate daylighting and low energy heating/o	cooli	ng ir	n bui	lding	gs		
4. To Model air flow and Ventilation								
5. To know il 6 To Design	lumination requirements artificial lighting and factors affect for climatic zones	ing c	lay l	ighti	ng			
Expected Course	Outcome:							
On comple	tion of this course, the students will be able to:							
1. Understand	I the concept of reduction in energy consumption through low	ene	rgy l	ouild	ing			
design					-			
2. Understand	the sources of renewable Energy							
3. Examine st	rategies to integrate day lighting and low energy heating / coe	oling	g in b	uildi	ngs			
4. Understand	I model air flow and Ventilation							
5. Know illur	nination requirements artificial lighting and factors affecting	g day	ligh	ting				
6. Design for	climatic zones			-				
Module: 1 Gre	en Buildings, Energy and Environment		6	hou	rs			
Green Buildings w	Attin the Indian Context, Types of Energy, Energy Efficiency	and	Reb	oun	1			
Effect, Pollution, I	Setter Buildings, Reducing energy consumption, Low energy	desi	gn.	b				
Solar apargy Bass	ive Solar Heating Dessive Solar collection Wind and other r	20011	/ /		n	ivo		
solar strategy: Dir	ect gain. Trombe wall convective air loop. Photovoltaics	Clin		s. A	pass Enor	ave		
Macro and Microc	limate - Indian Examples	CIIII	late	anu		gy,		
Module:3 Hea	ting and Cooling		8	hom	rs			
Building Form Su	urface area and Fabric Heat Loss utilizing natural energy	z. In	terna	al Pl	anni	ng		
Grouping of build	lings – Robin's Spatial Proportion – Orientation of building	у. –Н	eat t	rans	miss	ion		
through buildings	-Thermal properties of building materials - Thermal Con	fort	–Ps	ychr	ome	tric		
Chart –Heat tran	sfer – Cosine Effect - Insulation - Cooling buildings, p	assi	ve c	oolir	ng, a	and		
mechanical coolin	g – Measurement of heating and cooling loads.							
Module:4 Ven	tilation and Infiltration		8	hou	rs			
Natural ventilation	n and forced ventilation in commercial buildings, passive co	oolin	g, m	odel	ling	air		
flow and ventilation	on – stack effect - ventilation calculation – Mass effect							
Module:5 Day	lighting and Artificial Lighting		8	hou	rs			
Illumination requ	irements - Concepts of daylight factors and day lighting, dayl	ight	asse	ssme	ent, s	sky		
dome - sun path c	liagram, sky exposure angle, sun protection, shading coefficie	ent, v	/isua	lizin	g da	У		
lighting: Source-I	Path-Target and apparent size, illuminance calculation, penetr	atioi	n anc	l spre	ead o)t		
sky component, a	runcial lighting, enforce, Kadiant barriers - new light source	s —Iu liat	unina tina	aries	- 11g .01	,nt		
Module: C Dec	ign for Climatic Zones	ngn	a number and a number a	bom	101			
Enorgy officiant 1	ign for Chillauc Zones	x 7	3	uoul	5			
- composite wa	rm and humid _ moderate hot and dry case studies	ıy — (cola	and	suiin	y		
– composite – wa	and number – moderate – not and dry – case studies.							

Module:7 EnergyAssessment and Compliances Procedures				3 hours
Energy awareness, monitoring energy consumption, Building Environmental Assessment-				
environmental criteria – embodied energy of building materials - assessment methods - assessment				
tools (e.g. GRIHA, LEED) - Ecohomes - Sustainable architecture and urban design - principles of				
environmental architecture.				
Module:8 Contemporary issues				2 hours
Total Lecture hours			45 hours
