B.Tech (CSE) - Specialization in Information Security

CURRICULUM AND SYLLABUS

(2018-2019 Admitted Students)

VIT[®]

Vellore Institute of Technology

(Deemed to be University under section 3 of UGC Act, 1956)

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

To be a world-renowned centre of education, research and service in computing and allied domains.

MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

- To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

VIT[®]

Vellore Institute of Technology

(Deemed to be University under section 3 of UGC Act, 1956)

School of Computer Science and Engineering

B.Tech (CSE) - Specialization in Information Security

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
3. Graduates will function in their profession with social awareness and responsibility.
4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
5. Graduates will be successful in pursuing higher studies in engineering or management.
6. Graduates will pursue career paths in teaching or research.

B. Tech Computer Science and Engineering with Specialization in Information Security

PROGRAMME OUTCOMES (POs)

PO_01: Having an ability to apply mathematics and science in engineering applications.

PO_02: Having a clear understanding of the subject related concepts and of contemporary issues and apply them to identify, formulate and analyse complex engineering problems.

PO_03: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment

PO_04: Having an ability to design and conduct experiments, as well as to analyse and interpret data, and synthesis of information

PO_05: Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice

PO_06: Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems

PO_07: Having adaptive thinking and adaptability in relation to environmental context and sustainable development

PO_08: Having a clear understanding of professional and ethical responsibility

PO_09: Having cross cultural competency exhibited by working as a member or in teams

PO_10: Having a good working knowledge of communicating in English – communication with engineering community and society

PO_11: Having a good cognitive load management skills related to project management and finance

PO_12: Having interest and recognise the need for independent and lifelong learning

B. Tech Computer Science and Engineering with Specialization in Information Security

ADDITIONAL PROGRAMME OUTCOMES (APOs)

APO_01: Having an ability to be socially intelligent with good SIQ (Social Intelligence Quotient) and EQ (Emotional Quotient)

APO_02: Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking skills which cannot be codified)

APO_03: Having design thinking capability

APO_04: Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning)

APO_05: Having Virtual Collaborating ability

APO_06: Having an ability to use the social media effectively for productive use

APO_07: Having critical thinking and innovative skills

APO_08: Having a good digital footprint

VIT[®]

Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

School of Computer Science and Engineering

B.Tech (CSE) - Specialization in Information Security

PROGRAMME SPECIFIC OUTCOMES (PSOs)

1. The ability to formulate mathematical models and problem solving skills through programming techniques for addressing real life problems using appropriate data structures and algorithms.
2. The ability to provide ethical solutions through the application of software engineering methodologies and database design principles with internet technologies for solving contemporary issues.
3. The ability to investigate and analyze using appropriate methodologies as well as security principles and apply security solutions to mitigate cyber security threats.

B. Tech Computer Science and Engineering with Specialization in Information Security

CSE1003	DIGITAL LOGIC AND DESIGN	L	T	P	J	C
		3	0	2	0	4
Pre-requisite	NIL	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. Introduce the concept of digital and binary systems. 2. Analyze and Design combinational and sequential logic circuits. 3. Reinforce theory and techniques taught in the classroom through experiments in the laboratory. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Comprehend the different types of number system. 2. Evaluate and simplify logic functions using Boolean Algebra and K-map. 3. Design minimal combinational logic circuits. 4. Analyze the operation of medium complexity standard combinational circuits like the encoder, decoder, multiplexer, demultiplexer. 5. Analyze and Design the Basic Sequential Logic Circuits 6. Outline the construction of Basic Arithmetic and Logic Circuits 7. Acquire design thinking capability, ability to design a component with realistic constraints, to solve real world engineering problems and analyze the results. 						
Student Learning Outcomes (SLO): 1,2,5,14						
<ol style="list-style-type: none"> 1. Ability to apply mathematics and science in engineering applications. 2. Having a clear understanding of the subject related concepts and of contemporary issues 5. Having design thinking capability 14. Ability to design and conduct experiments, as well as to analyze and interpret data. 						
Module:1	INTRODUCTION	3 hours				
Number System - Base Conversion - Binary Codes - Complements(Binary and Decimal)						
Module:2	BOOLEAN ALGEBRA	8 hours				
Boolean algebra - Properties of Boolean algebra - Boolean functions - Canonical and Standard forms - Logic gates - Universal gates – Karnaugh map - Don't care conditions - Tabulation Method						
Module:3	COMBINATIONAL CIRCUIT - I	4 hours				
Adder - Subtractor - Code Converter - Analyzing a Combinational Circuit						
Module:4	COMBINATIONAL CIRCUIT –II	6 hours				
Binary Parallel Adder- Look ahead carry - Magnitude Comparator - Decoders – Encoders - Multiplexers –Demultiplexers.						
Module:5	SEQUENTIAL CIRCUITS – I	6 hours				
Flip Flops - Sequential Circuit: Design and Analysis - Finite State Machine: Moore and Mealy model - Sequence Detector.						
Module:6	SEQUENTIAL CIRCUITS – II	7 hours				
Registers - Shift Registers - Counters - Ripple and Synchronous Counters - Modulo counters - Ring and Johnson counters						
Module:7	ARITHMETIC LOGIC UNIT	9 hours				
Bus Organization - ALU - Design of ALU - Status Register - Design of Shifter - Processor Unit - Design of specific Arithmetic Circuits Accumulator - Design of Accumulator.						
Module:8	Contemporary Issues: RECENT TRENDS	2 hours				

		Total Lecture hours:		45 hours
Text Book(s)				
1.	M. Morris Mano and Michael D.Ciletti– Digital Design: With an introduction to Verilog HDL, Pearson Education – 5th Edition- 2014. ISBN:9789332535763.			
Reference Books				
1.	Peterson, L.L. and Davie, B.S., 2007. Computer networks: a systems approach. Elsevier.			
2.	Thomas L Floyd. 2015. Digital Fundamentals. Pearson Education. ISBN: 9780132737968			
3.	Malvino, A.P. and Leach, D.P. and Goutam Saha. 2014. Digital Principles and Applications (SIE). Tata McGraw Hill. ISBN: 9789339203405.			
4.	Morris Mano, M. and Michael D.Ciletti. 2014. Digital Design: With an introduction to Verilog HDL. Pearson Education. ISBN:9789332535763			
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar				
List of Challenging Experiments (Indicative)				
1.	Realization of Logic gates using discrete components, verification of truth table for logic gates, realization of basic gates using NAND and NOR gates			4.5 hours
	Implementation of Logic Circuits by verification of Boolean laws and verification of De Morgans law			3 hours
	Adder and Subtractor circuit realization by implementation of Half-Adder and Full-Adder, and by implementation of Half-Subtractor and Full-Subtractor			4.5 hours
	Combinational circuit design i. Design of Decoder and Encoder ii. Design of Multiplexer and De multiplexer iii. Design of Magnitude Comparator iv. Design of Code Converter			4.5 hours
	Sequential circuit design i. Design of Mealy and Moore circuit ii. Implementation of Shift registers iii. Design of 4-bit Counter iv. Design of Ring Counter			4.5 hours
	Implementation of different circuits to solve real world problems: A digitally controlled locker works based on a control switch and two keys which are entered by the user. Each key has a 2-bit binary representation. If the control switch is pressed, the locking system will pass the difference of two keys into the controller unit. Otherwise, the locking system will pass the sum of the two numbers to the controller unit. Design a circuit to determine the input to the controller unit.			4.5 hours
	Implementation of different circuits to solve real world problems: A bank queuing system has a capacity of 5 customers which serves on first come first served basis. A display unit is used to display the number of customers waiting in the queue. Whenever a customer leaves the queue, the count is reduced by one and the count is increased by one if a customer joins a queue. Two sensors (control signals) are used to sense customers leaving and joining the queue respectively. Design a circuit that displays the number of customers waiting in the queue in binary format using LEDs. Binary 1 is represented by LED glow and 0 otherwise.			4.5 hours
Total Laboratory Hours				30 hours
Mode of assessment: Project/Activity				
Recommended by Board of Studies		28-02-2017		
Approved by Academic Council		No. 46	Date	24-08-2017

CSE1004	NETWORK AND COMMUNICATION				L	T	P	J	C
					3	0	2	0	4
Pre-requisite	NIL	Syllabus version							
		v1.0							
Course Objectives:									
<ol style="list-style-type: none"> 1. To build an understanding among students about the fundamental concepts of computer networking, protocols, architectures, and applications. 2. To help students to acquire knowledge in design, implement and analyze performance of OSI and TCP-IP based Architectures. 3. To implement new ideas in Networking through assignments. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Interpret the different building blocks of Communication network and its architecture. 2. Contrast different types of switching networks and analyze the performance of network 3. Identify and analyze error and flow control mechanisms in data link layer 4. Design subnetting and analyze the performance of network layer 5. Construct and examine various routing protocols 6. Compare various congestion control mechanisms and identify appropriate Transport layer protocol for real time applications 7. Identify the suitable Application layer protocols for specific applications and its respective security mechanisms 									
Student Learning Outcomes (SLO): 2,5,6									
<ol style="list-style-type: none"> 2. Having a clear understanding of the subject related concepts and of contemporary issues 5. Having design thinking capability 6. Having an ability to design a component or a product applying all the relevant standards and with realistic constraints 									
Module:1	Networking Principles and layered architecture							6 hours	
Data Communications and Networking: A Communications Model – Data Communications - Evolution of network, Requirements , Applications, Network Topology (Line configuration, Data Flow), Protocols and Standards, Network Models (OSI, TCP/IP)									
Module:2	Circuit and Packet switching							7 hours	
Switched Communications Networks – Circuit Switching – Packet Switching – Comparison of Circuit Switching and Packet Switching – Implementing Network Software, Networking Parameters(Transmission Impairment, Data Rate and Performance)									
Module:3	Data Link Layer							10 hours	
Error Detection and Correction – Hamming Code , CRC, Checksum- Flow control mechanism – Sliding Window Protocol - GoBack - N - Selective Repeat - Multiple access Aloha - Slotted Aloha - CSMA, CSMA/CD – Multiple Access Networks (IEEE 802.3), Token Ring(IEEE 802.5) and Wireless Networks (IEEE 802.11, 802.15)									
Module:4	Network Layer							6 hours	
IPV4 Address Space – Notations – Classful Addressing – Classless Addressing – Network Address Translation – IPv6 Address Structure – IPv4 and IPv6 header format.									
Module:5	Routing Protocols							4 hours	
Routing-Link State and Distance Vector Routing Protocols- Implementation-Performance Analysis- Packet Tracer.									

Module:6	Transport Layer			7 hours
TCP and UDP-Congestion Control-Effects of Congestion-Traffic Management-TCP Congestion Control-Congestion Avoidance Mechanisms-Queuing Mechanisms-QoS Parameters				
Module:7	Application Layer			3 hours
Application layer-Domain Name System-Case Study : FTP-HTTP-SMTP-SNMP				
Module:8	Recent Trends in Network Security			2 hours
Total Lecture hours:				45 hours
Text Book(s)				
1.	Computer Networks: A Systems Approach, Larry Peterson and Bruce Davie, 5th Ed, The Morgan Kaufmann Series, Elsevier, 2011.			
2.	Computer Networking: A Top-Down Approach Featuring the Internet, J.F. Kurose and K.W.Ross, 6th Ed., Pearson Education, 2012.			
Reference Books

2.	TCP/IP Protocol Suite, Behrouz A. Forouzan, McGraw-Hill Education, 4 Ed., 2009.			
3.	Data and Computer Communications, William Stallings, Pearson Education, 10th Ed, 2013.			
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar				
List of Challenging Experiments (Indicative)				
1	Demo session of all networking hardware and Functionalities			3 Hours
2	Network configuration commands using Linux			3 Hours
3	Error detection and correction mechanisms			3 Hours
4	Flow control mechanisms			3 Hours
5	IP addressing Classless addressing			3 Hours
6	Observing Packets across the network and Performance Analysis of Routing protocols			3 Hours
7	Socket programming(TCP and UDP) Multi client chatting			3 Hours
8	Simulation of unicast routing protocols			3 Hours
9	Simulation of Transport layer Protocols and analysis of congestion control techniques in network			3 Hours
10	Develop a DNS client server to resolve the given host name or IP address			3 Hours
Total Laboratory Hours				30 hours
Mode of assessment: Project/Activity				
Recommended by Board of Studies		28-02-2017		
Approved by Academic Council		No. 46	Date	24-08-2017

CSE1011	CRYPTOGRAPHY FUNDAMENTALS	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	Nil	Syllabus version				
		v. 1.0				
Course Objectives:						
1.To learn the fundamental concepts of cryptography						
2. To defend the security attacks on information systems with secure algorithms						
Expected Course Outcome:						
1. Learn to analyze the security of the in-built cryptosystems						
2. Develop cryptographic algorithms for information security						
3. Develop authentication schemes for identity and membership authorization						
Student Learning Outcomes (SLO): 1,9,14,18						
1. Having an ability to apply mathematics and science in engineering applications						
9. Having problem solving ability- solving social issues and engineering problems						
14. Having an ability to design and conduct experiments, as well as to analyse and interpret data						
18. Having critical thinking and innovative skills						
Module:1	INTRODUCTION TO SECURITY	4 hours				
Information Security - Confidentiality, Integrity & Availability – Authentication, Authorization & Non-Repudiation – Introduction to Plain Text, Cipher Text, Encryption and Decryption Techniques, Secure Key, Hashing, Digital signature						
Module:2	SYMMETRIC ENCRYPTION	4 hours				
Block cipher, Stream cipher - Data Encryption Standard (DES) - Cipher Block Chaining (CBC) – Multiple Encryption DES - International Data Encryption Algorithm (IDEA) - Advanced Encryption Standard (AES)						
Module:3	ASYMMETRIC ENCRYPTION	4 hours				
Asymmetric key generation techniques – Applications of asymmetric encryption methods – RSA- Elliptic Curve Cryptography – Homomorphic encryption						
Module:4	DIGITAL SIGNATURES	3 hours				
Digital signature standards - Secure One-time Signatures - Application of Digital Signatures - Diffie-Hellman Key Exchange - Elliptic Curve Digital Signature algorithm						
Module:5	HASHING AND MESSAGE DIGESTS	4 hours				
Cryptographic Hash Functions- Applications- Simple hash functions and features for ensuring security – Hash functions based on Cipher Block Chaining- Secure Hash Algorithm (SHA) - Message Digest - MD5						
Module:6	MESSAGE AUTHENTICATION	5 hours				
Authentication Systems – Password and Address – Security Handshake Drawbacks - Authentication Standards – Kerberos- PKI Trust Models -Message Authentication Codes (MAC) – Security features- MAC based on Hash Functions - MAC based on Block Ciphers						
Module:7	APPLICATIONS OF CRYPTOGRAPHIC ALGORITHMS	4 hours				
Applying cryptography algorithms - Smart cards-Mobile phone security - Electronic passports and ID cards - SDA/DDA/CDA Bank Cards - Financial Cryptography – Secure Payment Systems - Crypto currencies - Bitcoin						

Module:8	Recent Trends	2 hours	
Industry Expert talk			
		Total Lecture hours:	30 hours
Text Book(s)			
1.	D. R. Stinson, Cryptography: Theory and Practice, 3rd Ed. Boca Raton, FL: Chapman & Hall/CRC, 2005. (ISBN No.: 978-1-58-488508-5).		
2.	W. Stallings, Cryptography and Network Security: Principles and Practice, 7th Ed. Pearson Publishers, 2017. (ISBN No.: 978-0-13-44446-11).		
Reference Books

2.	C. Kaufman, R. Perlman, and M. Speciner, Network Security: Private Communication in a Public World, 2nd Ed. United States: Prentice Hall PTR, 2002. (ISBN No.: 978-0-13-046019-6)		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	Demonstration of symmetric conventional cryptographic techniques.	3 hours	
2.	Demonstration of symmetric classic cryptographic techniques	3 hours	
3.	Demonstration of asymmetric cryptographic techniques	3 hours	
4.	Demonstration of hashing and message digest techniques	3 hours	
5.	Design and implementation of homomorphic encryption techniques	3 hours	
6.	Demonstration and implementation of secure communication using standard crypto libraries	3 hours	
7.	Implementation of smart card based server/client applications	3 hours	
8.	Demonstration of authentication techniques	3 hours	
9.	Developing cryptographic algorithms for industrial applications	3 hours	
10.	Developing cryptographic algorithms for innovative applications	3 hours	
		Total Laboratory Hours	30 hours

CSE2001	COMPUTER ARCHITECTURE AND ORGANIZATION	L	T	P	J	C
		3	0	0	0	3
Pre-requisite	CSE1003 Digital Logic Design	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To acquaint students with the basic concepts of fundamental component, architecture, register organization and performance metrics of a computer. 2. To impart the knowledge of data representation in binary and understand implementation of arithmetic algorithms in a typical computer. 3. To teach students how to describe machine capabilities and design an effective data path design for instruction execution. To introduce students to syntax and semantics of machine level programming. 4. To make students understand the importance of memory systems, IO interfacing techniques and external storage and their performance metrics for a typical computer. And explore various alternate techniques for improving the performance of a processor. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Differentiate Von Neumann, Harvard, and CISC and RISC architectures. Analyze the performance of machines with different capabilities. 2. Illustrate binary format for numerical and characters. Validate efficient algorithm for arithmetic operations. 3. Construct machine level program for given expression on n-address machine. Analyze and calculate memory traffic for a program execution. Design an efficient data path for an instruction format for a given architecture. 4. Explain the importance of hierarchical memory organization. Able to construct larger memories. Analyze and suggest efficient cache mapping technique and replacement algorithms for given design requirements. Demonstrate hamming code for error detection and correction. 5. Understand the need for an interface. Compare and contrast memory mapping and IO mapping techniques. Describe and Differentiate different modes of data transfer. Appraise the synchronous and asynchronous bus for performance and arbitration. 6. Understand the structure and read write mechanisms for different storage systems. Illustrate and suggest appropriate use of RAID levels. Assess the performance of IO and external storage systems. 7. Classify parallel machine models. Illustrate typical 6-stage pipeline for overlapped execution. Analyze the hazards and solutions. 						
Student Learning Outcomes (SLO): 1,2,5						
<ol style="list-style-type: none"> 1. Having an ability to apply mathematics and science in engineering applications 2. Having a clear understanding of the subject related concepts and of contemporary issues 5. Having design thinking capability 						
Module:1	Introduction and overview of computer architecture	3 hours				
Introduction to computer systems - Overview of Organization and Architecture -Functional components of a computer -Registers and register files-Interconnection of components- Organization of the von Neumann machine and Harvard architecture-Performance of processor						
Module:2	Data Representation And Computer Arithmetic	6 hours				
Fixed point representation of numbers-algorithms for arithmetic operations: multiplication (Booths, Modified Booths) - division (restoring and non-restoring) - Floating point representation with IEEE standards and algorithms for common arithmetic operations- Representation of non-numeric data (character codes).						

Module:3	Fundamentals of Computer Architecture	11 hours
Introduction to ISA (Instruction Set Architecture)-Instruction formats- Instruction types and addressing modes- Instruction execution (Phases of instruction cycle)- Assembly language programming-Subroutine call and return mechanisms-Single cycle Data path design-Introduction to multi cycle data path-Multi cycle Instruction execution.		
Module:4	Memory System Organization and Architecture	9 hours
Memory systems hierarchy-Main memory organization-Types of Main memory-memory interleaving and its characteristics and performance- Cache memories: address mapping-line size-replacement and policies- coherence- Virtual memory systems- TLB- Reliability of memory systems- error detecting and error correcting systems.		
Module:5	Interfacing and Communication	7 hours
I/O fundamentals: handshaking, buffering-I/O techniques: programmed I/O, interrupt-driven I/O, DMA- Interrupt structures: vectored and prioritized-interrupt overhead- Buses: Syn-chronous and asynchronous- Arbitration.		
Module:6	Device Subsystems	4 hours
External storage systems-organization and structure of disk drives: Electronic- magnetic and optical technologies- RAID Levels- I/O Performance		
Module:7	Performance Enhancements	4 hours
Classification of models - Flynn's taxonomy of parallel machine models (SISD, SIMD, MISD, MIMD)- Introduction to Pipelining- Pipelined data path-Introduction to hazards		
Module:8	Contemporary issues: Recent Trends	1 hour
Multiprocessor architecture: Overview of Shared Memory architecture, Distributed architecture.		
Total Lecture hours:		45 hours

Approved by Academic Council	No. 37	Date 16-06-2015

CSE2003	DATA STRUCTURES AND ALGORITHMS				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	NIL				Syllabus version				
					v1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To impart the basic concepts of data structures and algorithms. 2. To assess how the choice of data structures and algorithm design methods impacts the performance of programs. 3. To provide an insight into the intrinsic nature of the problem and to develop software systems of varying complexity. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Evaluating and providing suitable techniques for solving a problem using basic properties of Data Structures. 2. Analyse the performance of algorithms using asymptotic notations. 3. Demonstrate knowledge of basic data structures and legal operations on them. 4. Illustrate different types of algorithmic approaches to problem solving and assess the trade-offs involved. 5. Analyse basic graph algorithms, operations and applications through a structured (well-defined) algorithmic approach. 6. Categorize the feasibility and limitations of solutions to real-world problems. 7. Provide efficient algorithmic solution to real-world problems. 									
Student Learning Outcomes (SLO): 1,6,9									
<ol style="list-style-type: none"> 1. Having an ability to apply mathematics and science in engineering applications. 6. Having an ability to design a component or a product applying all the relevant standards and with realistic constraints 9. Having problem solving ability- solving social issues and engineering problems 									
Module:1	Introduction to Data structures and Algorithms				1 hour				
Overview and importance of algorithms and data structures, Stages of algorithm development for solving a problem: Describing the problem, Identifying a suitable technique, Design of an Algorithm, Proof of Correctness of the Algorithm, Computing the time complexity of the Algorithm.									
Module:2	Analysis of Algorithms				3 hours				
Asymptotic notations and their significance, Running time of an algorithm, Time-complexity of an algorithm, Performance analysis of an algorithm, Analysis of iterative and recursive algorithms, Master theorem (without proof).									
Module:3	Data Structures				7 hours				
Importance of data structures, Arrays, Stacks, Queues, Linked list, Trees, Hashing table, Binary Search Tree, Heaps.									
Module:4	Algorithm Design Paradigms				8 hours				
Divide and Conquer, Brute force, Greedy, Recursive Backtracking and Dynamic programming.									
Module:5	Graph Algorithms				4 hours				
Breadth First Search (BFS), Depth First Search (DFS), Minimum Spanning Tree (MST), Single Source Shortest Paths.									
Module:6	Computational Complexity classes				5 hours				
Tractable and Intractable Problems, Decidable and Undecidable problems, Computational complexity Classes: P, NP and NP complete - Cooks Theorem (without proof),3-CNF-SAT Problem, Reduction of 3-CNF-SAT to Clique Problem, Reduction of 3-CNF-SAT to Subset sum									

problem.			
Module:7		Recent Trends	2 hours
Algorithms related to Search Engines			
		Total Lecture hours:	30 hours
Text Book(s)			
1.	Thomas H. Cormen, C.E. Leiserson, R L.Rivest and C. Stein, Introduction to Algorithms, Third edition, MIT Press, 2009.

CSE2004	DATABASE MANAGEMENT SYSTEM				L	T	P	J	C	
					2	0	2	4	4	
Pre-requisite	NIL	Syllabus version								
									v1.0	
Course Objectives:										
<ol style="list-style-type: none"> 1. To understand the concept of DBMS and ER Modeling. 2. To explain the normalization, Query optimization and relational algebra. 3. To apply the concurrency control, recovery, security and indexing for the real time data. 										
Expected Course Outcome:										
<ol style="list-style-type: none"> 1. Explain the basic concept and role of DBMS in an organization. 2. Illustrate the design principles for database design, ER model and normalization. 3. Demonstrate the basics of query evaluation and heuristic query optimization techniques. 4. Apply Concurrency control and recovery mechanisms for the desirable database problem. 5. Compare the basic database storage structure and access techniques including B Tree, B+ Tress and hashing. 6. Review the fundamental view on unstructured data and its management. 7. Design and implement the database system with the fundamental concepts of DBMS. 										
Student Learning Outcomes (SLO): 1,5,7										
<ol style="list-style-type: none"> 1.Having an ability to apply mathematics and science in engineering applications 5.Having design thinking capability 7.Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning) 										
Module:1	DATABASE SYSTEMS CONCEPTS AND ARCHITECTURE							5 hours		
History and motivation for database systems -characteristics of database approach - Actors on the scene - Workers behind the scene - Advantages of using DBMS approach– Data Models, Schemas, and Instances– Three-Schema Architecture and Data Independence– The Database System Environment– Centralized and Client/Server Architectures for DBMSs– Classification of database management systems.										
Module:2	DATA MODELING							4 hours		
Entity Relationship Model : Types of Attributes, Relationship, Structural Constraints - Relational Model, Relational model Constraints - Mapping ER model to a relational schema - Integrity constraints										
Module:3	SCHEMA REFINEMENT							6 hours		
Guidelines for Relational Schema – Functional dependency; Normalization, Boyce Codd Normal Form, Multi-valued dependency and Fourth Normal form; Join dependency and Fifth Normal form.										
Module:4	QUERY PROCESSING AND TRANSACTION PROCESSING							5 hours		
Translating SQL Queries into Relational Algebra - heuristic query optimization - Introduction to Transaction Processing - Transaction and System concepts – Desirable properties of Transactions - Characterizing schedules based on recoverability - Characterizing schedules based on serializability										
Module:5	CONCURRENCY CONTROL AND RECOVERY TECHNIQUES							4 hours		
Two-Phase Locking Techniques for Concurrency Control – Concurrency Control based on timestamp – Recovery Concepts – Recovery based on deferred update – Recovery techniques based on immediate update - Shadow Paging.										
Module:6	PHYSICAL DATABASE DESIGN							3 hours		

Indexing: Single level indexing, multi-level indexing, dynamic multilevel Indexing			
Module:7	RECENT TRENDS - NOSQL DATABASE MANAGEMENT	3 hours	
Introduction, Need of NoSQL, CAP Theorem, different NoSQL data models: Key-value stores, Column families, Document databases, Graph databases			
Total Lecture hours:			30 hours
Text Book(s)

CSE2005	OPERATING SYSTEMS				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	NIL				Syllabus version				
					v1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To introduce the concept of Operating system concepts and designs and provide the skills required to implement the services. 2. To describe the trade-offs between conflicting objectives in large scale system design. 3. To develop the knowledge for application of the various design issues and services. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Interpret the evolution of OS functionality, structures and layers. 2. Apply various types of system calls and to find the stages of various process states. 3. Design a model scheduling algorithm to compute various scheduling criteria. 4. Apply and analyze communication between inter process and synchronization techniques. 5. Implement page replacement algorithms, memory management problems and segmentation. 6. Differentiate the file systems for applying different allocation and access techniques. 7. Representing virtualization and Demonstrating the various Operating system tasks and the principle algorithms for enumerating those tasks. 									
Student Learning Outcomes (SLO): 2, 14, 17									
<ol style="list-style-type: none"> 2. Having a clear understanding of the subject related concepts and of contemporary issues. 14. Having an ability to design and conduct experiments, as well as to analyze and interpret data. 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice. 									
Module:1	Introduction				2 hours				
Introduction to OS: - Functionality of OS - OS Design issues - Structuring methods (monolithic, layered, modular, micro-kernel models) - Abstractions, processes, and resources - influence of security, networking, multimedia.									
Module:2	OS Principles				3 hours				
System Calls System/Application Call Interface - Protection User/Kernel modes - Interrupts Processes and Threads - Structures (Process Control Block, Ready List etc).									
Module:3	Scheduling				5 hours				
Processes Scheduling - CPU Scheduling - Pre-emptive non-pre-emptive - Resource allocation and management - Deadlocks Deadlock Handling Mechanisms.									
Module:4	Concurrency				4 hours				
Inter-process communication Synchronization - Implementing Synchronization Primitives Semaphores - Monitors - Multiprocessors and Locking - Scalable Locks - Lock-free Coordination.									
Module:5	Memory management				5 hours				
Main Memory management Memory allocation strategies Caching -Virtual Memory Hardware TLB - Virtual Memory OS techniques Paging Segmentation Page Faults Page Replacement Thrashing Working Set.									
Module:6	Virtualization				4 hours				
Virtual Machines Virtualization (Hardware/Software, Server, Service, Network) Hypervisors -OS - Container Virtualization - Cost of virtualization.									
Module:7	File systems				3 hours				
File system interface - file system implementation File system recovery Journaling - Soft updates									

LFS - Distributed file system.			
Module:8		Security Protection and trends	
			4 hours
Security and Protection - Mechanism Vs Policies Access and authentication - models of protection Memory Protection Disk Scheduling - OS performance, Scaling OS - Mobile OS: Recent Trends: - Future directions in Mobile OS / Multi-core Optimization /Power efficient Scheduling			
			Total Lecture hours:
			30 hours
Text Book(s)			
1.	Abraham Silberschatz, Peter B. Galvin, Greg Gagne-Operating System Concepts, Wiley (2012).		
Reference Books			
1.	Ramez Elmasri, A Carrick, David Levine, Operating Systems, A Spiral Approach - McGrawHill Science Engineering Math (2009).		
2.	Remzi H. Arpaci-Dusseau, Andrea C. Arpaci-Dusseau, Operating Systems, Three Easy Pieces, Arpaci-Dusseau Books, Inc (2015).		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	Write a boot loader - to load a particular OS say TinyOS/ KolibriOS image - code to access from BIOS to loading the OS - involves little assembly code may use QEMU/virtual machines for emulation of hardware.		3 hours
2.	Allocate/free memory to processes in whole pages, find max allocatable pages, incorporate address translation into the program.		3 hours
3.	Create an interrupt to handle a system call and continue the previously running process after servicing the interrupt.		3 hours
4.	Write a Disk driver for the SATA interface. Take care to check readiness of the controller, locked buffer cache, accept interrupts from OS during the period, interrupting the OS again once done and clearing buffers.		3 hours
5.	Demonstrate the use of locks in conjunction with the IDE driver.		3 hours
6.	Run an experiment to determine the context switch time from one process to another and one kernel thread to another. Compare the findings.		3 hours
7.	Determine the latency of individual integer access times in main memory, L1 Cache and L2 Cache. Plot the results in log of memory accessed vs average latency.		3 hours
8.	Compare the overhead of a system call with a procedure call. What is the cost of a minimal system call?		3 hours
9.	Compare the task creation times. Execute a process and kernel thread, determine the time taken to create and run the threads.		3 hours
10.	Determine the file read time for sequential and random access based of varying sizes of the files. Take care not to read from cached data - used the raw device interface. Draw a graph log/log plot of size of file vs average per-block time.		3 hours
			Total Laboratory Hours
			30 hours

CSE2008	NETWORK SECURITY				L	T	P	J	C
					3	0	0	4	4
Pre-requisite	Nil	Syllabus version							
v. 1.0									
Course Objectives:									
1. To develop a fundamental understanding of computer and network security proper practices, policies, technologies and standards 2.To impart familiarity with the security techniques that provide information and network security 3.To enable to evaluate the security of communication systems networks and protocols based on a multitude of security factors									
Expected Course Outcome:									
1. Describe computer and network security fundamental concepts and principles. 2. Identify and assess different types of threats, malware, spyware, viruses, vulnerabilities, and today's attacks such as social engineering, rootkit, and botnets 3. Describe the inner-workings of today's real time communication security, e-mail security and wireless security 4. Demonstrate the ability to select among available network security technology and protocols such as IDS, IPS, firewalls, honeynets, SSL, SSH, IPsec, TLS, VPNs, etc..									
Student Learning Outcomes (SLO): 1,2,10,14,17									
1. Having an ability to apply mathematics and science in engineering applications 2. Having a clear understanding of the subject related concepts and of contemporary issues 10. Having a clear understanding of professional and ethical responsibility 14. Having an ability to design and conduct experiments, as well as to analyse and interpret data 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice									
Module:1	INTRODUCTION ON NETWORKING AND SECURITY							7 hours	
Access Control and Site Security- Virtual Local Area Network (VLAN), Demilitarized zone (DMZ) ATTACKS, SERVICES MECHANISMS Attack Methods – TCP/IP Internetworking, Security problems in TCP/IP protocol suite, BGP security attacks, DNS Cache poisoning, Denial of Service (DoS) attacks, Distributed Denial of Service (DDoS) attacks, IP Trace back attacks									
Module:2	REAL-TIME COMMUNICATION SECURITY							8 hours	
Introduction to TCP/IP protocol stack -Implementation layers for security protocols and implications - IPsec: AH and ESP- IPsec: IKE- SSL/TLS- Distribution lists-Establishing keys-Privacy, Source Authentication, Message Integrity, Non-Repudiation, Proof of Submission, Proof of Delivery, Message Flow Confidentiality, Anonymity – Packet filters-Application level gateways.									
Module:3	INTERNET CONTROL MESSAGE PROTOCOL (ICMP)							5 hours	
ICMP Messages - Attacks Using ICMP Messages - Reconnaissance Scanning - ICMP Sweep-Traceroute - Firewall - Inverse Mapping - OS Fingerprinting - Exploiting Systems - ICMP Route Redirect - ICMP informational messages - ICMP Router Discovery Messages - ICMP Floods - Smurf - Keeping Access Covering The Tracks									
Module:4	ELECTRONIC MAIL SECURITY							5 hours	
Pretty Good Privacy – PGP services – Transmission and Reception of PGP Messages – PGP Message Generation – PGP Message Reception									
Module:5	Web Security							4 hours	

Threats on the web – Secure Socket Layer and Transport Layer Security:SSL architecture – SSL record protocol – Handshake protocols			
Module:6	Wireless Security	7 hours	
SSID vulnerabilities, Hotspot vulnerabilities, Privacy and security issues in WiFi, WPA, Wireless Intrusion Prevention System (WIPS), - Audit records - Viruses and related threats –Security of data oriented and voice oriented wireless networks (GSM UMTS, other models) IOT SECURITY Introduction –Application Space – IoT Security Issues – Hardware, Software and Network Security Solutions – Security Analysis			
Module:7	Network Defense Solutions	7 hours	
Firewall, VPNs, Intrusion Detection and Prevention filters, Covert channels and counter measures in communication protocols, Techniques for shielding applications from an untrusted environment, Client and Server Security tools and applications			
Module:8	Recent Trends	2 hours	
Industry Expert talk			
		Total Lecture hours:	45 hours

CSE3001	SOFTWARE ENGINEERING				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	NIL				Syllabus version				
					v1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To introduce the essential software engineering concepts involved 2. To impart skills in the design and implementation of efficient software systems across disciplines 3. To familiarize engineering practices and standards used in developing software products and components 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Explain the principles of the engineering processes in software development. 2. Develop the software projects through activities such as planning and scheduling. 3. Classify and specify the requirements for the software projects. 4. Design the prototype of the software projects. 5. Implement the software development processes activities from requirements to validation and verification. 6. Apply benchmarking standards in process and in product. 									
Student Learning Outcomes (SLO): 1, 5, 6									
<ol style="list-style-type: none"> 1. Having an ability to apply mathematics and science in engineering applications. 5. Having design thinking capability. 6. Having an ability to design a component or a product applying all the relevant standards and with realistic constraints. 									
Module:1	OVERVIEW OF SOFTWARE ENGINEERING				5 hours				
Nature of Software, Software Engineering, Software process, project, product, Process Models Classical Evolutionary models, Overview of System Engineering									
Module:2	INTRODUCTION TO SOFTWARE PROJECT MANAGEMENT				3 hours				
Planning scope, milestones deliverables, Risk Management, Metrics Measurement									
Module:3	MODELLING REQUIREMENTS				6 hours				
Requirements Engineering process Requirement Elicitation, System Modelling - Requirements Specification and Requirement Validation									
Module:4	SOFTWARE DESIGN				4 hours				
Design concepts and principles - Abstraction - Refinement - Modularity Cohesion coupling, Architectural design, Detailed Design Transaction Transformation, Refactoring of designs, Object-oriented Design User-Interface Design									
Module:5	VALIDATION and VERIFICATION				4 hours				
Strategic Approach to Software Testing, Testing Fundamentals Test Plan, Test Design, Test Execution, Reviews, Inspection Auditing									
Module:6	SOFTWARE EVOLUTION				4 hours				
Software Maintenance, Types of Maintenance, Software Configuration Management, Overview of RE-engineering Reverse Engineering									
Module:7	QUALITY ASSURANCE				2 hours				
Product Process Metrics, Quality Standards Models ISO, TQM, Six-Sigma									

Module:8		RECENT TRENDS		2 hours	
Recent Trends in Software Design/Specialized Software Testing, Related Tools and Standards

CSE3002	INTERNET AND WEB PROGRAMMING	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	CSE2004-Database Management System	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To comprehend and analyze the basic concepts of web programming and internet protocols. 2. To describe how the client-server model of Internet programming works. 3. To demonstrates the uses of scripting languages and their limitations. 						
Expected Course Outcome:						
After successfully completing the course the student should be able to						
<ol style="list-style-type: none"> 1. Differentiate web protocols and web architecture. 2. Apply JavaScript, HTML and CSS effectively to create interactive and dynamic websites. 3. Implement client side scripting using JavaScript. 4. Develop applications using Java. 5. Implement server side script using PHP, JSP and Servlets. 6. Develop XML based web applications. 7. Develop application using recent environment like Node JS, Angular JS, JSON and AJAX. 						
Student Learning Outcomes (SLO): 2, 5, 6, 17						
<ol style="list-style-type: none"> 2. Having a clear understanding of the subject related concepts and of contemporary issues. 5. Having design thinking capability 6. Having an ability to design a component or a product applying all the relevant standards and with realistic constraints 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice 						
Module:1	INTRODUCTION TO INTERNET	2 hours				
Internet Overview- Networks - Web Protocols — Web Organization and Addressing - Web Browsers and Web Servers -Security and Vulnerability-Web System Architecture – URL - Domain Name – Client-side and server-side scripting.						
Module:2	WEB DESIGNING	4 hours				
HTML5 – Form elements, Input types and Media elements, CSS3 - Selectors, Box Model, Backgrounds and Borders, Text Effects, Animations, Multiple Column Layout, User Interface.						
Module:3	CLIENT-SIDE PROCESSING AND SCRIPTING	7 hours				
JavaScript Introduction –Functions – Arrays – DOM, Built-in Objects, Regular Expression, Exceptions, Event handling, Validation- AJAX - JQuery.						
Module:4	SERVER SIDE PROCESSING AND SCRIPTING - PHP	5 hours				
Introduction to PHP – Operators – Conditionals – Looping – Functions – Arrays- Date and Time Functions – String functions - File Handling - File Uploading – Email Basics - Email with attachments.						
Module:5	PHP SESSION MANAGEMENT and DATABASE CONNECTIVITY	3 hours				
Sessions-Cookies-MySQL Basics – Querying single and multiple MySQL Databases with PHP – PHP Data Objects.						
Module:6	XML	4 hours				
XML Basics – XSL, XSLT, XML Schema-JSON.						

Module:7	APPLICATION DEVELOPMENT USING NODE JS	4 hours
Introduction to Node.js- Installing Node.js - Using Events, Listeners, Timers, and Callbacks in Node.js – Introduction to Mongo DB- Accessing MongoDB from Node.js.		
Module:8	Industry Expert Talk	1 hour
Total Lecture hours:		30 hours
Text Book(s)

CSE4001	PARALLEL AND DISTRIBUTED COMPUTING	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To introduce the fundamentals of parallel and distributed computing architectures and paradigms. 2. To understand the technologies, system architecture, and communication architecture that propelled the growth of parallel and distributed computing systems. 3. To develop and execute basic parallel and distributed application using basic programming models and tools. 						
Expected Course Outcome:						
Students who complete this course successfully are expected to:						
<ol style="list-style-type: none"> 1. Design and implement distributed computing systems. 2. Asses models for distributed systems. 3. Design and implement distributed algorithms. 4. Experiment with mechanisms such as client/server and P2P algorithms, remote procedure calls (RPC/RMI), and consistency. 5. Analyse the requirements for programming parallel systems and critically evaluate the strengths and weaknesses of parallel programming models. 6. Differentiate between the major classes of parallel processing systems. 7. Analyse the efficiency of a parallel processing system and evaluate the types of application for which parallel programming is useful. 						
Student Learning Outcomes (SLO): 2, 5, 14, 17						
2.Having a clear understanding of the subject related concepts and of contemporary issues.						
5.Having design thinking capability.						
14.Having an ability to design and conduct experiments, as well as to analyze and interpret data.						
17.Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice.						
Module:1	Parallelism Fundamentals	2 hours				
Motivation – Key Concepts and Challenges – Overview of Parallel computing – Flynn’s Taxonomy – Multi-Core Processors – Shared vs Distributed memory.						
Module:2	Parallel Architectures	3 hours				
Introduction to OpenMP Programming – Instruction Level Support for Parallel Programming – SIMD – Vector Processing – GPUs.						
Module:3	Parallel Algorithm and Design	5 hours				
Preliminaries – Decomposition Techniques – Characteristics of Tasks and Interactions – Mapping Techniques for Load balancing – Parallel Algorithm Models.						
Module:4	Introduction To Distributed Systems	4 hours				
Introduction – Characterization of Distributed Systems – Distributed Shared Memory – Message Passing – Programming Using the Message Passing Paradigm – Group Communication – Case Study (RPC and Java RMI).						
Module:5	Coordination	6 hours				
Time and Global States – Synchronizing Physical Clocks – Logical Time and Logical Clock – Coordination and Agreement – Distributed Mutual Exclusion – Election Algorithms – Consensus and Related Problems.						

Module:6	Distributed Transactions	6 hours	
Transaction And Concurrency Control – Nested Transactions – Locks – Optimistic Concurrency Control – Timestamp Ordering Distributed Transactions – Flat and Nested – Atomic – Two Phase Commit Protocol – Concurrency Control.			
Module:7	Distributed System Architecture and its Variants	2 hours	
Distributed File System: Architecture – Processes – Communication Distributed Web-based System: Architecture – Processes – Communication. Overview of Distributed Computing Platforms.			
Module:8	Recent Trends	2 hours	
Total Lecture hours:		30 hours	
Text Book(s)			
1.	George Coulouris, Jean Dollimore, Tim Kindberg, and Gordon Blair, “Distributed Systems: Concepts and Design”, 5th Edition, Pearson / Addison – Wesley, 2012		
2.	Ananth Grama, Anshul Gupta, George Karypis and Vipin Kumar, “Introduction to Parallel Computing”, Pearson, 2nd Edition, 2008.		
Reference Books			
1.	Andrew S. Tanenbaum and Maarten Van Steen, “Distributed Systems: Principles and Paradigms”, Pearson, 2nd Edition, 2006		
2.	Pradeep K. Sinha, “Distributed Operating System: Concepts and Design”, PHI Learning Pvt. Ltd., 2007		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	OpenMP – Basic programs such as Vector addition, Dot Product	2 hours	
2.	OpenMP – Loop work-sharing and sections work-sharing	2 hours	
3.	OpenMP – Combined parallel loop reduction and Orphaned parallel loop reduction	2 hours	
4.	OpenMP – Matrix multiply (specify run of a GPU card, large scale data ... Complexity of the problem need to be specified)	3 hours	
5.	MPI – Basics of MPI	3 hours	
6.	MPI – Communication between MPI process	3 hours	
7.	MPI – Advanced communication between MPI process	3 hours	
8.	MPI – Collective operation with ‘synchronization’	3 hours	
9.	MPI – Collective operation with ‘data movement’	3 hours	
10.	MPI – Collective operation with ‘collective computation’	3 hours	
11.	MPI – Non-blocking operation	3 hours	
Total Laboratory Hours			30 hours
Mode of assessment: Project/Activity

EEE1001	Basic Electrical and Electronics Engineering	L	T	P	J	C
		2	0	2	0	3
Pre-requisite	NIL	Syllabus version				
		v. 1.0				
Course Objectives:						
1. To understand the various laws and theorems applied to solve electric circuits and networks						
2. To provide the students with an overview of the most important concepts in Electrical and Electronics Engineering which is the basic need for every engineer						
Expected Course Outcome:						
1. Solve basic electrical circuit problems using various laws and theorems						
2. Analyze AC power circuits and networks, its measurement and safety concerns						
3. Classify and compare various types of electrical machines						
4. Design and implement various digital circuits						
5. Analyze the characteristics of semiconductor devices and comprehend the various modulation techniques in communication engineering						
6. Design and conduct experiments to analyze and interpret data						
Student Learning Outcomes (SLO): 1,2,9						
1. Having an ability to apply mathematics and science in engineering applications						
2. Having a clear understanding of the subject related concepts and of contemporary issues						
9. Having problem solving ability- solving social issues and engineering problems						
Module:1	DC circuits	5 hours				
Basic circuit elements and sources, Ohms law, Kirchoff's laws, series and parallel connection of circuit elements, Node voltage analysis, Mesh current analysis, Thevenin's and Maximum power transfer theorem						
Module:2	AC circuits	6 hours				
Alternating voltages and currents, AC values, Single Phase RL, RC, RLC Series circuits, Power in AC circuits-Power Factor- Three Phase Systems – Star and Delta Connection- Three Phase Power Measurement – Electrical Safety –Fuses and Earthing, Residential wiring						
Module:3	Electrical Machines	7 hours				
Construction, Working Principle and applications of DC Machines, Transformers, Single phase and Three-phase Induction motors, Special Machines-Stepper motor, Servo Motor and BLDC motor						
Module:4	Digital Systems	5 hours				
Basic logic circuit concepts, Representation of Numerical Data in Binary Form- Combinational logic circuits, Synthesis of logic circuits						
Module:5	Semiconductor devices and Circuits	7 hours				
Conduction in Semiconductor materials, PN junction diodes, Zener diodes, BJTs, MOSFETs, Rectifiers, Feedback Amplifiers using transistors. Communication Engineering: Modulation and Demodulation - Amplitude and Frequency Modulation						
		Total Lecture hours:	30 hours			
Text Book(s)						
1.	1. John Bird, 'Electrical circuit theory and technology ', Newnes publications, 4 t h Edition, 2010.					
Reference Books						
1.	Allan R. Hambley, 'Electrical Engineering -Principles & Applications' Pearson Education, First Impression, 6/e, 2013					

2.	Simon Haykin, 'Communication Systems', John Wiley & Sons, 5 t h Edition, 2009.		
3.	Charles K Alexander, Mathew N O Sadiku, 'Fundamentals of Electric Circuits', Tata McGraw Hill, 2012.		
4.	Batarseh, 'Power Electronics Circuits', Wiley, 2003		
5.	H. Hayt, J.E. Kemmerly and S. M. Durbin, 'Engineering Circuit Analysis', 6/e, Tata McGraw Hill, New Delhi, 2011.		
7.	Fitzgerald, Higgabogan, Grabel, 'Basic Electrical Engineering', 5t h edn, McGraw Hill, 2009.		
8.	S.L.Uppal, 'Electrical Wiring Estimating and Costing ', Khanna publishers, NewDelhi, 2008.		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	Thevenin's and Maximum Power Transfer Theorems – Impedance matching of source and load	3 hours	
2.	Sinusoidal steady state Response of RLC circuits	3 hours	
3.	Three phase power measurement for ac loads	3 hours	
4.	Staircase wiring circuit layout for multi storey building	3 hours	
5.	Fabricate and test a PCB layout for a rectifier circuit	3 hours	
6.	Half and full adder circuits.	3 hours	
7.	Full wave Rectifier circuits used in DC power supplies. Study the characteristics of the semiconductor device used	3 hours	
8.	Regulated power supply using zener diode. Study the characteristics of the Zener diode used	3 hours	
9.	Lamp dimmer circuit (Darlington pair circuit using transistors) used in cars. Study the characteristics of the transistor used	3 hours	
10.	Characteristics of MOSFET	3 hours	
Total Laboratory Hours			30 hours

MAT1014	Discrete Mathematics and Graph Theory				L	T	P	J	C
					3	1	0	0	4
Pre-requisite	Nil				Syllabus Version				
					1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To address the challenge of the relevance of lattice theory, coding theory and algebraic structures to computer science and engineering problems. 2. To use number theory, in particular congruence theory to cryptography and computer science problems. 3. To understand the concepts of graph theory and related algorithm concepts. 									
Expected Course Outcome:									
At the end of this course, students are expected to									
<ol style="list-style-type: none"> 1. form truth tables, proving results by truth tables, finding normal forms, 2. learn proof techniques and concepts of inference theory 3. understand the concepts of groups and application of group codes, use Boolean algebra for minimizing Boolean expressions. 4. learn basic concepts of graph theory, shortest path algorithms, concepts of trees and minimum spanning tree and graph colouring, chromatic number of a graph. 5. Solve Science and Engineering problems using Graph theory. 									
Student Learning Outcomes (SLO):					1, 2, 7				
<ol style="list-style-type: none"> 1. Having an ability to apply knowledge of mathematics in Science and Engineering 2. Having a clear understanding of the subject related concepts and of contemporary issues 7. Having computational thinking 									
Module:1	Mathematical Logic and Statement Calculus				6 hours				
Introduction-Statements and Notation-Connectives–Tautologies–Two State Devices and Statement logic -Equivalence - Implications–Normal forms - The Theory of Inference for the Statement Calculus.									
Module:2	Predicate Calculus				4 hours				
The Predicate Calculus - Inference Theory of the Predicate Calculus.									
Module:3	Algebraic Structures				5 hours				
Semigroups and Monoids - Groups – Subgroups – Lagrange’s Theorem Homomorphism – Properties-Group Codes.									
Module:4	Lattices				5 hours				
Partially Ordered Relations -Lattices as Posets – Hasse Digram – Properties of Lattices.									
Module:5	Boolean algebra				5 hours				
Boolean algebra - Boolean Functions-Representation and Minimization of Boolean Functions – Karnaugh map – McCluskey algorithm.									
Module:6	Fundamentals of Graphs				6 hours				
Basic Concepts of Graph Theory – Planar and Complete graph - Matrix representation of Graphs – Graph Isomorphism – Connectivity–Cut sets-Euler and Hamilton Paths–Shortest Path algorithms.									
Module:7	Trees, Fundamental circuits , Cut sets,				12 hours				

Graph colouring, covering, Partitioning			
Trees – properties of trees – distance and centres in tree –Spanning trees – Spanning tree algorithms- Tree traversals- Fundamental circuits and cut-sets. Bipartite graphs - Chromatic number – Chromatic partitioning – Chromatic polynomial - matching – Covering– Four Colour problem.			
Module:8	Contemporary Issues		2 hours
Industry Expert Lecture			
		Total Lecture hours:	45 hours
Tutorial	<ul style="list-style-type: none"> • A minimum of 10 problems to be worked out by students in every Tutorial class. • Another 5 problems per Tutorial Class to be given as home work. 		15 hours
Mode of Evaluation			
Individual Exercises, Team Exercises, Online Quizzes, Online, Discussion Forums			
Text Book(s)

MAT2002	APPLICATIONS OF DIFFERENTIAL AND DIFFERENCE EQUATIONS	L	T	P	J	C
		3	0	2	0	4
Pre-requisite	MAT1011 - Calculus for Engineers	Syllabus Version				
		v1.0				
Course Objectives:						
The course is aimed at						
1. Presenting the elementary notions of Fourier series, which is vital in practical harmonic analysis						
2. Imparting the knowledge of eigenvalues and eigen vectors of matrices and the transform techniques to solve linear systems, that arise in sciences and engineering						
3. Enriching the skills in solving initial and boundary value problems						
4. Impart the knowledge and application of difference equations and the Z-transform in discrete systems, that are inherent in natural and physical processes						
Expected Course Outcomes:						
At the end of the course the student should be able to						
1. Employ the tools of Fourier series to find harmonics of periodic functions from the tabulated values						
2. Apply the concepts of eigenvalues, eigen vectors and diagonalisation in linear systems						
3. Know the techniques of solving differential equations						
4. Understand the series solution of differential equations and finding eigen values, eigen functions of Sturm-Liouville's problem						
5. Know the Z-transform and its application in population dynamics and digital signal processing						
6. Demonstrate MATLAB programming for engineering problems						
Student Learning Outcomes (SLO): 1, 2, 9						
1. Having an ability to apply mathematics and science in engineering applications						
2. Having a clear understanding of the subject related concepts and of contemporary issues						
9. Having problem solving ability- solving social issues and engineering problems						
Module:1	Fourier series	6 hours				
Fourier series - Euler's formulae - Dirichlet's conditions - Change of interval - Half range series - RMS value - Parseval's identity - Computation of harmonics						
Module:2	Matrices	6 hours				
Eigenvalues and Eigen vectors - Properties of eigenvalues and eigen vectors - Cayley-Hamilton theorem - Similarity of transformation - Orthogonal transformation and nature of quadratic form						
Module:3	Solution of ordinary differential equations	6 hours				
Linear second order ordinary differential equation with constant coefficients - Solutions of homogenous and non-homogenous equations - Method of undetermined coefficients - method of variation of parameters - Solutions of Cauchy-Euler and Cauchy-Legendre differential equations						
Module:4	Solution of differential equations through Laplace transform and matrix method	8 hours				
Solution of ODE's - Nonhomogeneous terms involving Heaviside function, Impulse function - Solving nonhomogeneous system using Laplace transform - Reduction of n th order differential equation to first order system - Solving nonhomogeneous system of first order differential equations $(X' = AX + G)$ and $X'' = AX$						

Module:5	Strum Liouville's problems and power series Solutions	6 hours
The Strum-Liouville's Problem - Orthogonality of Eigen functions - Series solutions of differential equations about ordinary and regular singular points - Legendre differential equation - Bessel's differential equation		
Module:6	Z-Transform	6 hours
Z-transform -transforms of standard functions - Inverse Z-transform: by partial fractions and convolution method		
Module:7	Difference equations	5 hours
Difference equation - First and second order difference equations with constant coefficients - Fibonacci sequence - Solution of difference equations - Complementary function - Particular integral by the method of undetermined coefficients - Solution of simple difference equations using Z-transform		
Module:8	Contemporary Issues	2 hours
Industry Expert Lecture		
Total Lecture hours:		45 hours
Text Book(s)		
1.	Advanced Engineering Mathematics, Erwin Kreyszig, 10 th Edition, John Wiley India, 2015	
Reference Books		
1.	Higher Engineering Mathematics, B. S. Grewal, 43 rd Edition, Khanna Publishers, India, 2015	
2.	Advanced Engineering Mathematics by Michael D. Greenberg, 2 nd Edition, Pearson Education, Indian edition, 2006	
Mode of Evaluation		
Digital Assignments (Solutions by using soft skills), Continuous Assessment Tests, Quiz, Final Assessment Test		
1.	Solving Homogeneous differential equations arising in engineering problems	2 hours
2.	Solving non-homogeneous differential equations and Cauchy, Legendre equations	2 hours
3.	Applying the technique of Laplace transform to solve differential equations	2 hours
4.	Applications of Second order differential equations to Mass spring system (damped, undamped, Forced oscillations), LCR circuits etc.	2 hours
5.	Visualizing Eigen value and Eigen vectors	2 hours
6.	Solving system of differential equations arising in engineering applications	2 hours
7.	Applying the Power series method to solve differential equations arising in engineering applications	3 hours
8.	Applying the Frobenius method to solve differential equations arising in engineering applications	3 hours
9.	Visualising Bessel and Legendre polynomials	3 hours
10.	Evaluating Fourier series-Harmonic series	3 hours
11.	Applying Z-Transforms to functions encountered in engineering	3 hours
12.	Solving Difference equations arising in engineering applications	3 hours
Total Laboratory Hours		30 hours
Mode of Evaluation: Weekly Assessment, Final Assessment Test

MAT3004	APPLIED LINEAR ALGEBRA		L	T	P	J	C
			3	1	0	0	4
Pre-requisite	MAT2002 Applications of Differential and Difference Equations	Syllabus Version					
		v1.0					
Course Objectives							
<p>1. Understanding basic concepts of linear algebra to illustrate its power and utility through applications to computer science and Engineering.</p> <p>2. apply the concepts of vector spaces, linear transformations, matrices and inner product spaces in engineering.</p> <p>3. solve problems in cryptography, computer graphics and wavelet transforms</p>							
Expected Course Outcomes							
<p>At the end of this course the students are expected to learn</p> <p>1. the abstract concepts of matrices and system of linear equations using decomposition methods</p> <p>2. the basic notion of vector spaces and subspaces</p> <p>3. apply the concept of vector spaces using linear transforms which is used in computer graphics and inner product spaces</p> <p>4. applications of inner product spaces in cryptography</p> <p>5. Use of wavelet in image processing.</p>							
Student Learning Outcomes(SLO) 1,2,7							
<p>1. Having an ability to apply knowledge of Mathematics in Science and Engineering</p> <p>2. Having a clear understanding of the subject related concepts and of contemporary issues</p> <p>7. Having computational thinking</p>							
Module:1	System of Linear Equations:	6 hours					
Gaussian elimination and Gauss Jordan methods - Elementary matrices- permutation matrix - inverse matrices - System of linear equations - - LU factorizations.							
Module:2	Vector Spaces	6 hours					
The Euclidean space \mathbb{R}^n and vector space- subspace –linear combination-span-linearly dependent-independent- bases - dimensions-finite dimensional vector space.							
Module:3	Subspace Properties:	6 hours					
Row and column spaces -Rank and nullity – Bases for subspace – invertibility- Application in interpolation.							
Module:4	Linear Transformations and applications	7 hours					
Linear transformations – Basic properties-invertible linear transformation - matrices of linear transformations - vector space of linear transformations – change of bases – similarity							
Module:5	Inner Product Spaces:	6 hours					
Dot products and inner products – the lengths and angles of vectors – matrix representations of inner products- Gram-Schmidt orthogonalisation							
Module:6	Applications of Inner Product Spaces:	6 hours					
QR factorization- Projection - orthogonal projections – relations of fundamental subspaces – Least Square solutions in Computer Codes							

Module:7	Applications of Linear equations :	6 hours
An Introduction to coding - Classical Cryptosystems –Plain Text, Cipher Text, Encryption, Decryption and Introduction to Wavelets (only approx. of Wavelet from Raw data)		
Module:8	Contemporary Issues:	2 hours
Industry Expert Lecture		
	Total Lecture hours:	45 hours
Tutorial	<ul style="list-style-type: none"> • A minimum of 10 problems to be worked out by students in every Tutorial Class • Another 5 problems per Tutorial Class to be given as home work. 	15 hours
Text Book(s)		
1. Linear Algebra, Jin Ho Kwak and Sungpyo Hong, Second edition Springer(2004). (Topics in the Chapters 1,3,4 &5)		
2. Introductory Linear Algebra- An applied first course, Bernard Kolman and David, R. Hill, 9 th Edition Pearson Education, 2011.		
Reference Books

PROGRAMME ELECTIVE

BCI2001	DATA PRIVACY				L	T	P	J	C	
					3	0	0	4	4	
Pre-requisite	NIL	Syllabus version								
									v1.0	
Course Objectives:										
<p>1.To recognize the need of data privacy.</p> <p>2.To categorize the statistical and computational techniques needed to share data, with a primary focus on the social, behavioural and health sciences.</p> <p>3.To formulate architectural, algorithmic and technological foundations for the maintenance of the privacy of individuals, the confidentiality of organizations, and the protection of sensitive information, despite the requirement that information be released publicly or semi-publicly</p>										
Expected Course Outcome:										
<p>1.Characterize basic rules and principles for protecting privacy and personal information.</p> <p>2.Design enhanced privacy protection methods by envisioning the basic attacks to happen.</p> <p>3.Formulate data that supports useful statistical inference while minimizing the disclosure of sensitive information</p>										
Student Learning Outcomes (SLO): 1,2,10,14,17										
<p>1 Having an ability to apply mathematics and science in engineering applications.</p> <p>2.Having a clear understanding of the subject related concepts and of contemporary issues.</p> <p>10. Having a clear understanding of professional and ethical responsibility.</p> <p>14. Having an ability to design and conduct experiments, as well as to analyse and interpret data.</p> <p>17.Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice.</p>										
Module:1	Data Privacy and its Importance							4 hours		
Need for Sharing Data, Methods of Protecting Data, Importance of Balancing Data Privacy and Utility, Disclosure, Tabular Data, Micro data, Approaches to Statistical disclosure control, Ethics, principles, guidelines and regulations										
Module:2	Microdata							7 hours		
Disclosure, Disclosure risk, Estimating re-identification risk, Non-perturbative microdata masking, Perturbative microdata masking, Information loss in microdata										
Module:3	Static Data Anonymization on Multidimensional Data							8 hours		
Privacy Preserving Methods, Classification of Data in a Multidimensional Data Set, Group- Based Anonymization, k- Anonymity, l-Diversity, t-closeness										
Module:4	Static Data Anonymization on Complex Data Structures							8 hours		
Privacy Preserving Graph Data, Privacy Preserving Time Series Data, Time Series Data Protection Methods, Privacy Preservation of Longitudinal Data, Privacy Preservation of Transaction Data.										
Module:5	Data Anonymization Threats							8 hours		
Threats to Anonymized Data, Threats to Data Structures, Threats by Anonymization Techniques, Randomization, k- Anonymization, l-Diversity, t-Closeness. Dynamic Data Protection: Tokenization, Understanding Tokenization, Use Cases for Dynamic Data Protection, Benefits of Tokenization Compared to Other Methods, Components for Tokenization.										
Module:6	Privacy Preserving Data Mining							4 hours		
Key Functional Areas of Multidimensional Data for privacy preservation , Association Rule Mining, Clustering algorithms for privacy preservation										

Module:7	Privacy Preserving Test Data Generation	7 hours	
Test Data Fundamentals, Utility of Test Data: Test Coverage, Privacy Preservation of Test Data, Quality of Test Data, Anonymization Design for PPTDG, Insufficiencies of Anonymized Test Data.			
Module:8	Contemporary Issues: RECENT TRENDS	2 hours	
Very large Scale Integrated circuits (VLSI), Field Programmable Gate Arrays(FPGA).			
		Total Lecture hours:	45 hours
Text Book(s)

BCI3001	WEB SECURITY				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	NIL				Syllabus version				
					v1.0				
Course Objectives:									
1.To study and practice fundamental techniques in developing secure web based applications 2.To identify and find the vulnerabilities of web based applications and to protect those applications from attacks									
Expected Course Outcome:									
1.To understand security-related issues in Web-based systems and applications. 2.To understand the fundamental mechanisms of securing a Web-based system. 3.To be able to implement security mechanisms to secure a Web-based application. 4.To be able to evaluate a Web-based system with respect to its security requirements									
Student Learning Outcomes (SLO): 1,2,10,14,17,18									
1. Having an ability to apply mathematics and science in engineering applications 2.Having a clear understanding of the subject related concepts and of contemporary issues 10. Having a clear understanding of professional and ethical responsibility 14. Having an ability to design and conduct experiments, as well as to analyse and interpret data 17.Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice 18.Having critical thinking and innovative skills.									
Module:1	Introduction				3 hours				
Introduction - Evolution of Web Applications - Web Application Security - Core Defence Mechanisms - Handling User Access - Handling User Input- Handling Attackers - Managing the Application - The OWASP Top Ten List									
Module:2	WEB APPLICATION TECHNOLOGIES				4 hours				
Web Functionality Encoding Schemes Mapping the Application - Enumerating the Content and Functionality Analysing the Application Bypassing Client Side Controls : Transmitting Data Via the Client Capturing User Data Handling Client Side Data Securely - Input Validation, Blacklist Validation - Whitelist Validation - The Defence-in-Depth Approach - Attack Surface Reduction Rules of Thumb									
Module:3	WEB APPLICATION AUTHENTICATION				4 hours				
Authentication Fundamentals- Two Factor and Three Factor Authentication - Password Based, Built-in HTTP, Single Sign-on Custom Authentication- Secured Password Based Authentication: Attacks against Password, Importance of Password Complexity - Design Flaws in Authentication Mechanisms - Implementation Flaws in Authentication Mechanisms - Securing Authentication									
Module:4	SESSION MANAGEMENT				3 hours				
Need for Session Management Weaknesses in Session Token Generation Weaknesses in Session Token Handling Securing Session Management; Access Control : Access Control Overview, Common Vulnerabilities Attacking Access Controls Securing Access Control.									
Module:5	WEB SECURITY PRINCIPLES				3 hours				
Origin Policy, Exceptions Cross Site Scripting, Cross Site Forgery Scripting; File Security Principles: Source Code Security, Forceful Browsing, Directory Traversals- Classifying and Prioritizing Threats Origin Policy.									
Module:6	WEB APPLICATION VULNERABILITY				6 hours				

Understanding Vulnerabilities in Traditional Client Server Application and Web Applications, Client State Manipulation, Cookie based Attacks, SQL Injection, Cross Domain Attack (XSS/ XSRF/ XSSI), HTTP Header Injection, SSL Vulnerabilities And Testing - Proper Encryption use in Web Application - Session Vulnerabilities and Testing - Cross-Site Request Forgery			
Module:7	EXPLOITING SYSTEMS	5 hours	
Path Traversal - Finding and Exploiting Path Traversal Vulnerability Preventing Path Traversal Vulnerability Information Disclosure - Exploiting Error Messages Securing Compiled Applications Buffer Overflow Vulnerability Integer Vulnerability Format String Vulnerability.			
Module:8	Contemporary Issues: RECENT TRENDS	2 hours	
Very large Scale Integrated circuits (VLSI), Field Programmable Gate Arrays(FPGA).

BCI3002	DISASTER RECOVERY AND BUSINESS CONTINUITY MANAGEMENT	L	T	P	J	C
		3	0	0	4	4
Pre-requisite	NIL	Syllabus version				
v1.0						
Course Objectives:						
1.To develop an understanding of concepts of risk management 2.To examine aspects of incident response and contingency planning consisting of incident response plans, disaster recovery plans, and business continuity plans. 3.To develop and execute plans to deal with contingency, incident response, disaster recovery and business continuity						
Expected Course Outcome:						
1.Describe concepts of risk management 2.Define and differentiate contingency planning components 3.Define and be able to discuss incident response options 4.Design an incident response plan for sustained organizational operations 5.Discuss and recommend contingency strategies including data backup and recovery and alternate site selection for business resumption planning 6.Describe the escalation process from incident to disaster 7.Design a disaster recovery plan, business continuity plan for sustained organizational operations						
Student Learning Outcomes (SLO):						
		1,2,14,17				
1.Having an ability to apply mathematics and science in engineering applications 2.Having a clear understanding of the subject related concepts and of contemporary issues 14. Having an ability to design and conduct experiments, as well as to analyse and interpret data 17.Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice						
Module:1	DISASTER RECOVERY AND BUSINESS CONTINUITY INTRODUCTION	5 hours				
Disaster Different source of disaster and types of disasters. Disaster Recovery Operational cycle of disaster recovery, disaster recovery cost, incidents that requires disaster recovery plans, evaluating disaster recovery - methods, team, phases, objectives, checklist. Best practises for disaster recovery - Business continuity - Business continuity vs. disaster recovery						
Module:2	DISASTER RECOVERY PLANNING AND IMPLEMENTATION	6 hours				
Introduction - Aspects of security - Application security - Database security - Distributed system security - Firmware security - Industrial security. Profiles Operational profile, Application profiles, Inventory profile, Disaster recovery plan - Business impact analysis - Disaster recovery roles and responsibilities - Disaster recovery planning steps - Disaster preparedness - Notification and activation procedures						
Module:3	BUSINESS CONTINUITY MANAGEMENT	6 hours				
Introduction - Elements of business continuity management. Business continuity plan - Business continuity planning and strategies - BCP standards and guidelines - BCP Project Organization - Crisis communication plan - Emergency response plan - Contingency planning						
Module:4	MANAGING, ASSESSING AND EVALUATING RISKS	6 hours				
Introduction - Importance of risk management - Risk management methodology - Attack methods and Countermeasures - Cost benefits analysis of risk management - Risk assessment responsibilities - Responsibilities of security professional - Information system auditing and monitoring - Verification						

tools and techniques.			
Module:5	RISK CONTROL POLICIES AND COUNTER MEASURES	7 hours	
Introduction - Counter measures - Risk control policy development factors Development of information assurance principles and practices - Laws and procedures in information assurance policy implementation, Security test and evaluation, Automated security tools, Cost benefit analysis, Developing a risk assessment methodology, Security requirements, Information categorization, Risk management methodologies to develop life cycle management policies and procedures, Education, training and awareness. Policy development Information security policy, change control policies, system acquisition policies and procedures, Risk analysis policies and General risk control policies.			
Module:6	STORAGE DISASTER RECOVERY SERVICES TOOLS	7 hours	
Introduction - Importance of data backup - Preventing data loss - Developing an effective data backup strategy - Backup techniques Disk mirroring, Snapshot, Continuous data protection, and Parity protection. Backup schedules - Removable backup media - Potential risks - Challenges in backup and recovery - Backup and recovery checklist - Data backup and recovery tools - Offsite data backup methods and strategies - Enterprise backup tools			
Module:7	BUSINESS RECOVERY	6 hours	
Business recovery planning process mobilizing business recovery team, Assessing extent of damage and business impact, Preparing specific recovery plans, Assess damaged property and documents, Backup recovery site, Monitoring progress, Keeping stockholders informed, Handling business operation back to regular management. Planning recovery activities Communication systems, Human resources, Corporate proprietary information and documentation, IT systems Software architecture recovery.			
Module:8	Contemporary Issues: RECENT TRENDS	2 hours	
		Total Lecture hours:	45 hours

BCI3003	ANDROID SECURITY				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	NIL						Syllabus version		
							v1.0		
Course Objectives:									
1.To learn basic of the Android operating system and security aspects.									
2.To practice the android malware analysis techniques.									
3.To appraise the malwares analysis of real world applications.									
Expected Course Outcome:									
1.Identify various malwares and understand the behavior of malwares in real world applications.									
2.Implement different malware analysis techniques.									
3.Understand the malware behavior in android.									
4.Understand the purpose of malware analysis.									
5.Identify the various tools for malware analysis.									
Student Learning Outcomes (SLO): 1,4,7,9,10,14									
1.Having a clear understanding of the subject related concepts and of contemporary issues.									
4. Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking skills which cannot be codified).									
7. Having computational thinking									
9.Having an ability to design and conduct experiments, as well as to analyze and interpret data.									
10.Having a clear understanding of professional and ethical responsibility									
14.Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice.									
Module:1	INTRODUCTION TO ANDROID OPERATING SYSTEMS				3 hours				
Introduction to Android, Android API, DVM, APK File Structure Basic Analysis of an APK, Dex structure, Dex Structure Parsing, APK install process, Android Root.									
Module:2	APPLICATION SECURITY				5 hours				
Inspecting the AndroidManifest.xml file - Introduction to Android Debugging Tools and Their Usage, Interacting with the Activity Manager via ADB - Extracting Application Resources via ADB, Inspecting Application Certificates and Signatures - Verifying Application Signatures - Signing Android Applications. Mobile Security - IOS vs Android vs Windows									
Module:3	PERMISSIONS				4 hours				
Nature of Permissions, Permission Management, Permission Assignment, Permission Enforcement									
Module:4	ANDROID MALWARE VULNERABILITY				4 hours				
Master Key Vulnerability - File Name Length Vulnerability Introduction to Obfuscation - DEX Code Obfuscation									
Module:5	ENTERPRISE LEVEL SECURITY FOR MOBILE DEVICES				4 hours				
Security enhancement for Android, Device administration, Customizable secure boot, Knox security, Knox container, TIMA Trust Zone-based Integrity Measurement Architecture.									
Module:6	REVERSE ENGINEERING APPLICATIONS				4 hours				
Introduction Decompiling DEX Files to Java Interpreting the Dalvik Bytecode Decompiling the									

applications native libraries, Debugging Android process, CFF explorer, dex2Jar, Hex Editor, JD-GUI			
Module:7	DEVICE ADMINISTRATION POLICIES	4 hours	
Introduction - Using Cryptography Libraries - Screen Security - Secure USB Debugging			
Module:8	Contemporary Issues: RECENT TRENDS	2 hours	
Total Lecture hours:		30 hours	
Text /Reference Book(s)

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1	Inspect details of AndroidManifest.xml	3 Hours	
2	Installation of APK and identify the application	3 Hours	
3	Analysis of various Malware types and behavior	4 Hours	
4	Android malware analysis	4 Hours	
5	Data encoding and malware countermeasures	4 Hours	
6	Comparative study of various malware analysis tools	4 Hours	
7	Tools available in Antivirus Application	4 Hours	
8	Packet sniffing with Wire shark	4 Hours	
Total Laboratory Hours			30 Hours

BCI3004	SECURITY OF E-BASED SYSTEMS				L	T	P	J	C
		3	0	0	4	4			
Pre-requisite	NIL						Syllabus version		
							v1.0		
Course Objectives:									
<p>1.To discuss the basic security principles, as well as the issues, policy and standards particular to e-based applications.</p> <p>2.To introduce the technology, concepts, issues and principles for the design and implementation of secure e-based system.</p> <p>3.To enable to evaluate and critique the security and performance of security algorithms and protocols, and e - commerce systems.</p> <p>4.To describe remedies for various existing security breaches in e-based systems and to show the methodologies required to make future systems less prone to security failures and outside attack.</p>									
Expected Course Outcome:									
<p>1. Describe security features needed for an e- based system.</p> <p>2. Identify and assess different types of security breaches and possible solutions for a robust e-based system</p> <p>3. Describe the inner-workings of payment protocols, file transfer protocols, and related algorithms</p> <p>4. Demonstrate the ability to select and design among available security solutions based on different domains of e-based system</p>									
Student Learning Outcomes (SLO): 2,9,14,17									
<p>2. Having a clear understanding of the subject related concepts and of contemporary issues.</p> <p>9. Having problem solving ability- solving social issues and engineering problems</p> <p>14. Having an ability to design and conduct experiments, as well as to analyse and interpret data</p> <p>17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice</p>									
Module:1	E-Based System, E-Commerce Security						4 hours		
Evolution Of Commerce -Payment Modes And Methods - Distributed Computing Environ- ment Cloud Security- Mobile Commerce M Vs. E- Commerce- Web Commerce Security Requirements - E-Commerce Security -Risk Driven Security- Scalable Security Securing The Transactions.									
Module:2	Security Model For E-Commerce/M-Commerce						5 hours		
Architectural Framework - Cryptography Access Control- System Hardening Authentication - Authorization - Non-Repudiation Privacy Layered Security Architecture									
Module:3	Electronic and Online Payments						7 hours		
Electronic Payments: Overview, SET Protocol, Payment Gateway, Certificates, Digital Token, Smart Cards, Credit Cards, Magnetic Strip Cards, EChecks, Credit/ Debit Card EPS, Dash. Online Payments: Mobile Payments, Online Banking, Emerging Financial Instruments - Appli- cation in Business, E- Commerce Laws, Forms of Agreement, Government Policies and Agenda, Secured Online Shopping and Payment - Threats and Attacks Certification and Accreditation Process for Web Commerce Applications									
Module:4	E-Healthcare Security						5 hours		
Introduction - Nature and Trends Significance and Challenges Frameworks and Approaches Securing E-Healthcare - Information Breaches of Privacy and Confidentiality in E-Healthcare Utilisation Challenge - Legal Protection Challenge									
Module:5	Privacy And Confidentiality						5 hours		

Anonymization and Pseudo-Anonymization Secure E-Healthcare Information Systems Elements Security and Privacy Provisions Electronic Personal Health Care Records Clinical Decision Support Systems.			
Module:6	E-Governance Security		7 hours
Introduction - Secure and Interoperable e-Government Services- Trust Models Dos Attacks on E-Government Services- Certificate Management -Interoperability- Privacy Enabled Identity Management- E-Government Architecture- Anonymous and Accurate EPolling- Secure Multiparty/Multi Candidate Electronic Elections			
Module:7	E-Learning Security		10 hours
Introduction Security Attacks in E-Learning Modeling Security Services Real E-Learning Scenarios Secure Learning Management Systems Security in Collaborative Learning, Mobile Learning, Massive Open Online Courses (MOOC) - Trustworthiness for Secure Collaborative Learning Model Factors And Rules - Time Factor and Trustworthiness Sequences Knowledge Management for E-Learning Data - Trustworthiness-Based Security for P2P E-Assessment Security in EAssessment, P2P E-Assessment Case Study			
Module:8	Contemporary Issues: RECENT TRENDS		2 hours
		Total Lecture hours:	45 hours

BCI3005	DIGITAL WATERMARKING AND STEGANOGRAPHY		L	T	P	J	C	
			3	0	0	4	4	
Pre-requisite	NIL						Syllabus version	
							v1.0	
Course Objectives:								
<p>1.To develop an understanding of digital watermarking and steganography basics, various approaches, characteristics and application domains.</p> <p>2.To apply digital watermarking as an authentication tool for distribution of content over the Internet and steganography techniques for covert communication.</p> <p>3.To understand the basics of the counter measures like steganalysis for assessing the data hiding methods.</p> <p>4.To enable to evaluate and choose appropriate data hiding technique based on a multitude of security factors.</p>								
Expected Course Outcome:								
<p>1 Describe watermarking and steganography fundamental concepts and principles.</p> <p>2.Identify and assess different types of data hiding techniques in various image formats like GIF, BMP etc., and various data hiding methods like LSB, EzStego, OutGuess, and F5.</p> <p>3.Describe the block codes and its usage for covert communication.</p> <p>4.Demonstrate the use of watermarking for copyright protection and steganography for secret communication in various digital media.</p> <p>5.Design and implement efficient data hiding methods.</p> <p>6.Assess the strength of any data hiding algorithm against steganalysis techniques.</p>								
Student Learning Outcomes (SLO): 1,2,10,14,15								
<p>1.Having an ability to apply mathematics and science in engineering applications.</p> <p>2.Having a clear understanding of the subject related concepts and of contemporary issues.</p> <p>10. Having a clear understanding of professional and ethical responsibility.</p> <p>14.Having an ability to design and conduct experiments, as well as to analyse and interpret data.</p> <p>15.Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice.</p>								
Module:1	DATA HIDING							5 hours
Relationship between Watermarking and Steganography. Digital Watermarking Basics: Models of Watermarking, Basic Message Coding, Error Coding. Digital Watermarking Theoretic Aspects: Mutual Information and Channel Capacity, Designing a Good Digital Mark, Theoretical Analysis of Digital Watermarking Types of Watermarking Fragile, Semi-Fragile.								
Module:2	SPREAD SPECTRUM WATERMARKING							5 hours
Transform Domain Watermarking, Quantization Watermarking. Protocols: Buyer Seller Watermarking Protocols, Efficient and Anonymous Buyer-Seller Watermarking Protocol								
Module:3	STEGANOGRAPHY							8 hours
Introduction - Text Steganography Image Steganography: Data Hiding in Raw (BMP) Images - LSB (Least Significant Bit) Embedding - Data Hiding by Mimicking Device Noise (Stochastic Modulation). Data Hiding in Palette (GIF) Images - Palette Formats (GIF) - Hiding by Decreasing Colour Depth, Gifshuffle, - Optimal Palette Parity Assignment. Data Hiding in JPEG Images - JPEG Format - J-Steg Data Hiding Algorithm Hiding in Spatial Domain Hiding in Transform Domain Image Quality Metrics								
Module:4	AUDIO STEGANOGRAPHY							6 hours
Temporal Domain Techniques - Low-Bit Encoding - Echo Hiding - Hiding in Silence Intervals. Transform Domain Hiding Techniques - Magnitude Spectrum - Tone Insertion - Phase Coding								

- Amplitude Coding - Cepstral Domain Codecs Domain: Codebook Modification Bit stream Hiding Audio Quality Metrics			
Module:5	VIDEO STEGANOGRAPHY	6 hours	
Introduction Video Streams - Substitution- Based Techniques - Transform Domain Techniques - Adaptive Techniques - Format-Based Techniques - Cover Generation Techniques Video Quality Metrics - Perceptual Transparency Analysis - Robustness against Compression - Robustness against Manipulation.			
Module:6	WET PAPER CODES	6 hours	
Random Linear Codes - LT Codes - Perturbed Quantization, Matrix Embedding - Matrix Embedding Theorem - Binary Hamming Codes, Q-Ary Case Random Linear Codes for Large Payloads			
Module:7	STEGANALYSIS	7 hours	
Principles, Approaches, ROC Analysis - Sample Pairs Analysis - Attacks using Histogram Characteristic Function - Spatial Domain Steganalysis using Higher Order Statistics - Steganalysis using Resampling Calibration - Feature Selection - Calibration by Recompression			
Module:8	Contemporary Issues: RECENT TRENDS	2 hours	
		Total Lecture hours:	45 hours

BCI3006	BIOMETRICS				L	T	P	J	C
					3	0	0	4	4
Pre-requisite	NIL							Syllabus version	
								v1.0	
Course Objectives:									
<ol style="list-style-type: none"> 1.The design and working of a generic biometric security system. 2.The features used to represent and match individual biometric traits. 3.The performance metrics used to evaluate a biometric system. 4.The socio-legal implications of biometrics. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1.Demonstrate knowledge of the basic physical and biological science and engineering principles underlying biometric systems. 2.Understand and analyse biometric systems at the component level and be able to analyse and design basic biometric system applications. 3.Identify the sociological and acceptance issues associated with the design and implementation of biometric systems. 4.Understand various Biometric security issues. 									
Student Learning Outcomes (SLO): 2,5,6,7,14									
<ol style="list-style-type: none"> 2.Having a clear understanding of the subject related concepts and of contemporary issues 5.Having design thinking capability 6.Having an ability to design a component or a product applying all the relevant standards and with realistic constraints 7.Having a clear understanding of professional and ethical responsibility 14. Having an ability to design and conduct experiments, as well as to analyse and interpret data 									
Module:1	INTRODUCTION							7 hours	
Introduction of Biometric Traits and its Aim, Biometric Standards and Biometric Databases, Biometric Modalities - Principles of Biometrics: Behaviour and Physiology, Data Acquisition, Liveness Detection, Active Biometric Traits- Voice Biometrics, Handwriting Biometrics , Gait Biometrics, Other Active Traits, Passive Biometric Traits- Fingerprint Biometrics, Iris Biometrics, Face Biometrics, ECG Biometrics, Other Passive Traits, Multimodal Biometrics -Taxonomy of Multimodal Biometrics, Fusion Levels.									
Module:2	IMAGE PROCESSING AND BASIC IMAGE OPERATIONS							7 hours	
Pattern Recognition/ Statistics, Error Types. What is Image, Acquisition, Type, Point Operations, Geometric Transformations. Linear Interpolation, Brightness Correction, Histogram, Convolution, Linear/ Non -Linear Filtering, Gaussian, Median, Min, Gray Level Reduction. Special Filters, Enhancement Filter, Edge Detection, Derivatives, Laplacian, Unsharp Masking, High Pass Filtering, Sharpening Special Filtering, Edge Detection, Canny Edge Detection, Fourier Series, DFT , Inverse Of DFT									
Module:3	OPERATIONS OF A BIOMETRIC SYSTEM							4 hours	
Verification and Identification, Performance of a Biometric System, FAR, FRR, GAR, ERR, DET and ROC Curve, Failure to Acquire (FTA), Failure To Enroll (FTE), Applications of Bio- metrics in Government, Forensics and Commercial, Characteristics of Biometrics, Commonly used Biometrics									
Module:4	FACE RECOGNITION							7 hours	
Eigen faces (PCA), Linear Discriminant Analysis (LDA) and Fisher faces, Independent Component Analysis (ICA), Neural Networks (NN) And Support Vector Machines (SVM), Kernel Methods, FERET Database									

Module:5	FINGERPRINT RECOGNITION	7 hours
Sensing, Feature Extraction, Enhancement and Binarization, Minutiae Extraction, Matching Correlation Based Methods, Minutiae Based Methods, Ridge Feature Based Methods, Performance Evaluation, Synthetic Fingerprint Generation.		
Module:6	IRIS RECOGNITION SYSTEM	7 hours
Active Contours, Flexible Generalized Embedded Coordinates, Fourier-based Trigonometry and Correction for Off - Axis Gaze, Detecting and Excluding Eyelashes by Statistical Inference, Alternative Score Normalization Rules		
Module:7	BIOMETRIC SECURITY	4 hours
Vulnerabilities in Biometric Systems, Biometric Template Security, Encoded Biometric Schemes. Attacks to User Authentication Systems, Unauthorized Access: Thread Analysis Tree, Denial of Service: Thread Analysis Tree, Actions: Possession, Knowledge and Biometrics		
Module:8	Contemporary Issues: RECENT TRENDS	2 hours
Total Lecture hours:		45 hours
Text Book(s)

BCI4001	CYBER FORENSICS AND INVESTIGATION	L	T	P	J	C
		3	0	0	4	4
Pre-requisite	Nil	Syllabus version				
v. 1.0						
Course Objectives:						
1. To present the students with a comprehensive understanding of digital forensic principles and the collection, preservation, and analysis of digital evidence 2. To enlighten the importance of forensic principles and procedures, legal considerations, digital evidence controls, and the documentation of forensic analysis 3. To develop an understanding of the different applications and methods for conducting network and digital forensic acquisition and analysis						
Expected Course Outcome:						
1. Explain the responsibilities and liabilities of a computer forensic investigator 2. Plan and prepare for an incident requiring computer forensic skills 3. Seize a computer from a crime scene without damaging it or risking it becoming inadmissible in a court of law 4. Identify potential sources of electronic evidence. 5. Understand the importance of maintaining the integrity of digital evidence. 6. Demonstrate the ability to perform basic forensic data acquisition and analysis using computer and network based applications and utilities. 7. Demonstrate the ability to accurately document forensic procedures and results						
Student Learning Outcomes (SLO):		1,2,4,7,10,14,17				
1. Having an ability to apply mathematics and science in engineering applications 2. Having a clear understanding of the subject related concepts and of contemporary issues 4. Having Sense-Making Skills of creating unique insights in what is being seen or observed 7. Having computational thinking 10. Having a clear understanding of professional and ethical responsibility 14. Having an ability to design and conduct experiments, as well as to analyse and interpret data 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice						
Module:1	UNDERSTANDING CYBER FORENSICS AND LEGAL ASPECTS	7 hours				
Forensics Fundamentals ; Computer Forensics and Law Enforcement- Indian Cyber Forensic - Forensics Services, Professional Forensics Methodology- Types of Forensics Technology Forensics system and Services : Forensics on - Internet Usage – Intrusion - Firewall and Storage Area Network; Occurrence of Cyber-crimes- Cyber Detectives- Fighting Cyber Crimes- Forensic Process						
Module:2	COMPUTER FORENSICS	6 hours				
Data Backup and Recovery - Test Disk Suite, Data-Recovery Solution, Hiding and Recovering Hidden data, Evidence Collection and Data Seizure.						
Module:3	DIGITAL FORENSICS AND PRESERVATION	6 hours				
Digital Repositories - Evidence Collection – Data Preservation Approaches – Meta Data and Historic records – Legal aspects						
Module:4	FORENSIC DATA ANALYSIS	6 hours				
Basic Steps of Forensic Analysis in Windows and Linux – Forensic Scenario – Email Analysis – File Signature Analysis – Hash Analysis – Forensic Examination of log files						

Module:5	MOBILE DEVICE SECURITY AND FORENSICS	6 hours		
Introduction to Mobile Forensic – Android Device – Analysis- Android Malware – iOS Forensic Analysis – SIM Forensic Analysis – Case study				
Module:6	CLOUD FORENSICS	5 hours		
Working with the cloud vendor, obtaining evidence, reviewing logs and APIs				
Module:7	CURRENT COMPUTER FORENSIC TOOLS	7 hours		
Overview of different software packages – Encase-Autopsy-Magnet – Wireshark - Mobile Forensic Tools – SQLite Case study Report Preparation A real Forensic case study – Processing a complete Forensic case – Preparing Forensic Report				
Module:8	Recent Trends	2 hours		
Industry Expert talk				
		Total Lecture hours:	45 hours

BCI4002	VULNERABILITY ANALYSIS AND PENETRATION TESTING	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	Nil	Syllabus version				
		v. 1.0				
Course Objectives:						
1. To learn the tools that can be used to perform information gathering 2.To identify various attacks in various domains of cyber space. 3.To learn about exploits in various operating systems and Wireless environment 4.To learn how vulnerability assessment can be carried out by means of automatic tools or manual investigation 5.To learn the vulnerabilities associated with various network applications and database system.						
Expected Course Outcome:						
1 Ability to determine the security threats and vulnerabilities in computer networks using penetration testing techniques 2.Set up of a hacking lab environment to study and document vulnerabilities within the network 3.Realize and respect ethical boundaries to demonstrate and understand what is necessary and appropriate when conducting penetration tests						
Student Learning Outcomes (SLO):						
		2,10,14,17				
2.Having a clear understanding of the subject related concepts and of contemporary issues 10.Having a clear understanding of professional and ethical responsibility 14.Having an ability to design and conduct experiments, as well as to analyze and interpret data 17.Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice						
Module:1	Information Gathering and Detecting Vulnerabilities	5 hours				
Open Source Intelligence Gathering - Port Scanning - Nessus Policies - Web Application Scanning Manual Analysis- Traffic Capturing						
Module:2	Attacks	4 hours				
Password Attacks Client side Exploitation Social Engineering- Bypassing Antivirus Applications.						
Module:3	Exploits	4 hours				
Metasploit Payloads Open phpMyAdmin -Buffer overflow: Windows and Linux,Web scanning exploits, port scanning exploits, SQL exploits						
Module:4	Wireless Security	5 hours				
Wired vs. wireless Privacy Protocols - Wireless Frame Generation Encryption Cracking Tools- Wireless DoS Attacks						
Module:5	Common Vulnerability Analysis of Application Protocols	4 hours				
Simple Mail Transfer Protocol- File Transfer Protocol- Trivial File Transfer Protocol-Hyper Text Transmission Protocol-ICMP SMURF- UDP-DNS-PING-SYN						
Module:6	Network Vulnerability Analysis	4 hours				
Domain Name Server and Dynamic Host Configuration Protocol -Light Weight Directory Access Protocol-Simple Network Management Protocol-Remote Procedural Call						
Module:7	Penetration Tools and Database Security	3 hours				

Traceroutes, Neotrace, Whatweb. Database Security : Access control in database systems - Inference control - Multilevel database security			
Module:8	Recent Trends	1 hour

List of Challenging Experiments (Indicative)			
1.	Set up of Kali Linux in a Virtual machine and setup with DNS info and collection of local network.	2 hours	
2.	Scan the network for Windows XP and Windows 7 Target machines in local network and virtual network.	2 hours	
3.	Identify the open ports and firewall rules setup.	2 hours	
4.	Use password guessing tools to guess a password. Use password strengthening tools to strengthen the password. Try guessing the password and tabulate the enhanced difficulty due to length of password and addition of special characters	2 hours	
5.	Extract password hashes from Windows XP/ NT machine. Use a password extraction tool, using word list, single crack or external mode to recover the password. Increase the complexity of the password and determine the point at which the cracking tool fails	2 hours	
6.	Experiments on SQL injections.	2 hours	
7.	Analysis of WEP flaws.	2 hours	
8.	Experiments on Wireless DoS Attacks.	2 hours	
9.	Buffer Overflow Prevention	2 hours	
10.	Prevention against Cross Site Scripting Attacks.	2 hours	
11.	Experiments on Metasploit Framework.	2 hours	
12.	Cross Site Scripting.	2 hours	
13.	Cross Site Request Forgery.	2 hours	
14.	File upload vulnerability on Social engineering.	2 hours	
15.	Cracking Linux passwords	2 hours	
Total Laboratory Hours			30 hours

BCI4003	MALWARE ANALYSIS				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	Nil				Syllabus version				
					v. 1.0				
Course Objectives:									
1. To introduce the fundamentals of malware, types and its effects 2.To enable to identify and analyse various malware types by static, dynamic analysis and reverse engineering 3.To deal with detection, analysis, understanding, controlling, and eradication of malware									
Expected Course Outcome:									
1 Possess the skills necessary to carry out independent analysis of modern malware samples using both static and dynamic analysis techniques. 2.Have an intimate understanding of executable formats, Windows internals and API s, and malware analysis techniques. 3.Extract investigative leads from host and network-based indicators associated with a malicious program. 4.Apply techniques and concepts to unpack, extract, decrypt, or bypass new anti-analysis techniques in future malware samples. 5.Achieve proficiency with industry standard tools including ProcMon, CFF Explorer, ProcExplore, BinText, FileAlyzer, OllyDbg etc									
Student Learning Outcomes (SLO):					1,2,10,14,17				
1.Having an ability to apply mathematics and science in engineering applications 2.Having a clear understanding of the subject related concepts and of contemporary issues 10.Having a clear understanding of professional and ethical responsibility 14.Having an ability to design and conduct experiments, as well as to analyse and interpret data 17.Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice									
Module:1	INTRODUCTION TO MALWARE ANALYSIS				4 hours				
Malware taxonomy - Malware threats - Malware analysis methodologies - Legal considerations - Identifying and protecting against malware - Malware hiding places - Collecting malware from live system - Identifying malware in dead system Malware Analysis Environment : Virtual machine - Real systems - Malware analysis tools ProcMon, CFF Explorer, ProcExplore, BinText, FileAlyzer, OllyDbg									
Module:2	STATIC ANALYSIS				4 hours				
Detailed file analysis -Database of file hashes. Identifying file compile date Identifying packing/ obfuscation methods - Strings analysis - File signature analysis - Local and online malware scanning -Identifying file dependencies.									
Module:3	Dynamic Analysis				4 hours				
System baselining - Host integrity - Monitor - Installation monitor - Process monitor - File monitor - Registry analysis/ monitoring - Network traffic monitoring/ ana lysis - Port monitor - DNS monitoring/ resolution -Simulating internet services									
Module:4	CODE ANALYSIS				4 hours				
Reverse engineering malicious code - Identifying malware passwords - Bypassing authentication - Assembly level computing Standard x86 instructions, Introduction to IDA, Olly Dbg, Advanced malware analysis Virus, Trojan. Parsing Basic analysis of an APK									

Module:5	MALICIOUS DOCUMENT ANALYSIS	4 hours
PDF and Microsoft Office document structures - PDF and office document vulnerabilities - Malware extraction and analysis tools - Analysis of malicious documents		
Module:6	MALWARE CHALLENGES	3 hours
Virtual environment - Live internet connection - Real, fake, and virtual services -Anti-debug and anti-forensic malware		
Module:7	MOBILE MALWARE ANALYSIS	5 hours
Need for mobile application penetration testing methodology Android and iOS Vulnerabilities - Exploit Prevention - Handheld Exploitation- Android Root Spreading and Distribution Android Debugging		
Module:8	Recent Trends	2 hours
Industry Expert talk		
Total Lecture hours:		30 hours

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
List of Challenging Experiments (Indicative)		
1	Sandboxing malware and gathering information from runtime analysis	2 hours
2	Basic malware analysis finding file compilation date, imports/ exports, suspicious strings , run-time effect, procmon filter, hist -based signatures revealing files, registry keys, processes, services, network based signatures revealing URLs, packet contents, intention, checksum, and evidence	2 hours
3	Advanced static malware analysis finding address of main, code constructs, suspicious strings, imported functions, their tasks, intention of the malware, impact of the malware via hexcode	2 hours
4	Basic analysis of Windows programs for imports, msdn based purposes, changes, suspicious strings, persistence mechanism, COM interface, COM functions, host-based signature, checksum, VirusTotal Report for that malware.	2 hours
5	Advacned analysis of Windows programs for processes, interactive remote shell, uploaded file, address of the subroutine, return value, Windows APIs, functionalities of the malware	2 hours
6	Malware behaviour analysis finding the source of malware, how it reached	2 hours

	the system, persistence mechanism, multiple instances replication mechanism, hiding strategies, API calls for key logging, constants involved, post-infection actions of the malware, mutex, SendMessage API structure, what is done with the collected data	
7	Anti-disassembly and anti-debugging technique used in the binary by patching the PE, set a breakpoint in the malicious subroutine and let the program execute until the breakpoint	3 hours
8	Packing and unpacking malware finding the packers name, indicator, unpacking script, removing the nagging screen, resolving any PE header corruption, fixing the import table	3 hours
9	Disassembling Portable Executable (PE32) File Format following all imports, exports, functions, main address, malicious string locations, x86 assembly language	3 hours
10	Reversing basics: branches, loops, switches, differences between code and data, cross-references, imports & exports, searching, defining arrays, structures , and ,functions, standard library functions and FLIRT, IDA scripts and plugins	3 hours
11	Malware self - defense, compression, and obfuscation techniques packing, unpacking, identifying malicious code section, recognizing and defeating data encryption and encoding techniques etc	3 hours
12	Analyzing malicious Microsoft Office and Adobe PDF documents to locate potentially malicious embedded code such as shellcode, VBA macros or JavaScript, extract suspicious code from the file, disassemble and/ or debug shellcode, understand all the steps in the infection chain	3 hours
Total Laboratory Hours		30 hours

CSE1006	BLOCKCHAIN AND CRYPTOCURRENCY TECHNOLOGIES	L	T	P	J	C
		3	0	0	0	3
Pre-requisite	NIL	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To understand the mechanism of Blockchain and Cryptocurrency. 2. To understand the functionality of current implementation of blockchain technology. 3. To understand the required cryptographic background. 4. To explore the applications of Blockchain to cryptocurrencies and understanding limitations of current Blockchain. 5. An exposure towards recent research. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. To Understand and apply the fundamentals of Cryptography in Cryptocurrency 2. To gain knowledge about various operations associated with the life cycle of Blockchain and Cryptocurrency 3. To deal with the methods for verification and validation of Bitcoin transactions 4. To demonstrate the general ecosystem of several Cryptocurrency 5. To educate the principles, practices and policies associated Bitcoin business 						
Student Learning Outcomes (SLO): 9, 17						
<ol style="list-style-type: none"> 9. Having problem solving ability- solving social issues and engineering problems 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice 						
Module:1	Introduction to Cryptography and Cryptocurrencies	5 hours				
Cryptographic Hash Functions, Hash Pointers and Data Structures, Digital Signatures, Public Keys as Identities, A Simple Cryptocurrency.						
Module:2	How Blockchain Achieves and How to Store and Use	7 hours				
Decentralization-Centralization vs. Decentralization-Distributed consensus, Consensus with- out identity using a blockchain, Incentives and proof of work. Simple Local Storage, Hot and Cold Storage, Splitting and Sharing Keys, Online Wallets and Exchanges, Payment Services, Transaction Fees, Currency Exchange Markets.						
Module:3	Mechanics of Bitcoin	5 hours				
Bitcoin transactions, Bitcoin Scripts, Applications of Bitcoin scripts, Bitcoin blocks, The Bit- coin network, Limitations and improvements.						
Module:4	Bitcoin Mining	5 hours				
The task of Bitcoin miners, Mining Hardware, Energy consumption and ecology, Mining pools, Mining incentives and strategies						
Module:5	Bitcoin and Anonymity	5 hours				
Anonymity Basics, How to De-anonymize Bitcoin, Mixing, Decentralized Mixing, Zerocoin and Zerocash.						
Module:6	Community, Politics, and Regulation	9 hours				
Consensus in Bitcoin, Bitcoin Core Software, Stakeholders: Who's in Charge, Roots of Bitcoin, Governments Notice on Bitcoin, Anti Money Laundering Regulation, New York's Bit License Proposal. Bitcoin as a Platform: Bitcoin as an Append only Log, Bitcoins as Smart Property, Secure Multi Party Lotteries in Bitcoin, Bitcoin as Public Randomness, Source-Prediction Markets, and						

Real World Data Feeds.			
Module:7	Altcoins and the Cryptocurrency Ecosystem	7 hours	
Altcoins: History and Motivation, A Few Altcoins in Detail, Relationship Between Bitcoin and Altcoins, Merge Mining-Atomic Crosschain Swaps-6 BitcoinBacked Altcoins, Side Chains, Ethereum and Smart Contracts.			
Module:8	Recent Trends and applications	2 hours	
Total Lecture hours:		45 hours	
Text Book(s)

CSE1007	JAVA PROGRAMMING				L	T	P	J	C
					3	0	2	0	4
Pre-requisite	NIL				Syllabus version				
					v1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To impart the core language features of Java and its Application Programming Interfaces (API). 2. To demonstrate the use of threads, exceptions, files and collection frameworks in Java. 3. To familiarize students with GUI based application development and database connectivity. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Comprehend Java Virtual Machine architecture and Java Programming Fundamentals. 2. Design applications involving Object Oriented Programming concepts such as inheritance, association, aggregation, composition, polymorphism, abstract classes and interfaces. 3. Design and build multi-threaded Java Applications. 4. Build software using concepts such as files, collection frameworks and containers. 5. Design and implement Java Applications for real world problems involving Database Connectivity. 6. Design Graphical User Interface using JavaFX. 7. Design, Develop and Deploy dynamic web applications using Servlets and Java Server Pages. 									
Student Learning Outcomes (SLO): 1, 9, 14									
<ol style="list-style-type: none"> 1. Having an ability to apply mathematics and science in engineering applications 9. Having problem solving ability-solving social issues and engineering problems 14. Having an ability to design and conduct experiments, as well as to analyze and interpret data 									
Module:1	Java Fundamentals				4 hours				
Java Basics: Java Design goal - Features of Java Language - JVM - Bytecode - Java source file structure basic programming constructs Arrays one dimensional and multi-dimensional enhanced for loop String package									
Module:2	Object Oriented Programming				5 hours				
Class Fundamentals - Object Object reference array of objects constructors methods over- loading this reference static block - nested class inner class garbage collection finalize() Wrapper classes Inheritance types - use of super - Polymorphism abstract class interfaces packages and sub packages.									
Module:3	Robustness and Concurrency				6 hours				
Exception Handling - Exceptions Errors - Types of Exception - Control Flow in Exceptions - Use of try, catch, finally, throw, throws in Exception Handling - user defined exceptions - Multithreading Thread creation sharing the workload among threads synchronization inter thread communication deadlock.									
Module:4	Files, Streams and Object serialization				7 hours				
Data structures: Java I/O streams Working with files Serialization and deserialization of objects Lambda expressions, Collection framework List, Map, Set Generics Annotations									
Module:5	GUI Programming and Database Connectivity				7 hours				
GUI programming using JavaFX, exploring events, controls and JavaFX menus Accessing databases using JDBC connectivity.									
Module:6	Servlet				7 hours				
Introduction to servlet - Servlet life cycle - Developing and Deploying Servlets - Exploring Deployment Descriptor (web.xml) - Handling Request and Response - Session Tracking Man-									

agement.			
Module:7	Java Server Pages	7 hours	
JSP Tags and Expressions - JSP Expression Language (EL) - Using Custom Tag - JSP with Java Bean.			
Module:8	Latest Trends	2 hours	
Industry Expert talk			
		Total Lecture hours:	45 hours
Text Book(s)

CSE2002	THEORY OF COMPUTATION AND COMPILER DESIGN	L	T	P	J	C
		4	0	0	4	4
Pre-requisite	NIL	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. Provides required theoretical foundation for a computational model and compiler design 2. Discuss Turing machines as a abstract computational model 3. Compiler algorithms focus more on low level system aspects. 						
Expected Course Outcome:						
On successful completion of the course, the student should be able to:						
<ol style="list-style-type: none"> 1. Design computational models for formal languages 2. Design scanners and parsers using top-down as well as bottom-up paradigms 3. Design symbol tables and use them for type checking and other semantic checks 4. Implement a language translator 5. Use tools such as lex, YACC to automate parts of implementation process 						
Student Learning Outcomes (SLO): 1,9,18						
<ol style="list-style-type: none"> 1.Having an ability to apply mathematics and science in engineering applications 9.Having problem solving ability- solving social issues and engineering problems 18.Having critical thinking and innovative skills. 						
Module:1	Introduction To Languages and Grammers	3 hours				
Overview of a computational model - Languages and grammars – alphabets – Strings - Operations on languages, Introduction to Compilers - Analysis of the Source Program - Phases of a Compiler						
Module:2	Regular Expressions and Finite Automata	9 hours				
Finite automata – DFA – NFA – Equivalence of NFA and DFA (With Proof) - Regular expressions – Conversion between RE and FA (With Proof) Lexical Analysis - Recognition of Tokens - Designing a Lexical Analyzer using finite automata						
Module:3	Myhill-Nerode Theorem	4 hours				
Myhill-Nerode Theorem - Minimization of FA – Decision properties of regular languages – Pumping lemma for Regular languages (With Proof)						
Module:4	CFG, PDAs and Turing Machines	15 hours				
CFG – Chomsky Normal Forms - NPDA – DPDA - Membership algorithm for CFG. Syntax Analysis - Top-Down Parsing - Bottom-Up Parsing - Operator-Precedence Parsing - LR Parsers						
Module:5	Turing Machines	5 hours				
Turing Machines – Recursive and recursively enumerable languages – Linear bounded automata - Chomsky's hierarchy – Halting problem						
Module:6	Intermediate Code Generation	10 hours				
Intermediate Code Generation - Intermediate Languages – Declarations - Assignment Statements - Boolean Expressions - Case Statements – Backpatching - Procedure Calls.						
Module:7	Code Optimization	7 hours				
Code Optimization - Basic Blocks and Flow Graphs – The DAG Representation of Basic Blocks - The Principal Sources of Optimization - Optimization of Basic Blocks - Loops in Flow Graphs - Peephole Optimization - Introduction to Global Data-Flow Analysis						

Module:8	Code Generation	7 hour	
Code Generation – Issues in the Design of a Code Generator - The Target Machine - Run-Time Storage Management - Next-Use Information - Register Allocation and Assignment - A Simple Code Generator - Generating Code from DAG Recent Trends – Just-in-time compilation with adaptive optimization for dynamic languages - Parallelizing Compilers Total Lecture Hours			
		Total Lecture hours:	60 hours

CSE2006	MICROPROCESSOR AND INTERFACING				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	CSE1003-Digital Logic Design, CSE2001-Computer Architecture and Organization				Syllabus version				
									v1.0
Course Objectives:									
<ol style="list-style-type: none"> 1. Students will gain knowledge on architecture, accessing data and instruction from memory for processing. 2. Ability to do programs with instruction set and control the external devices through I/O interface 3. Generate a system model for real world problems with data acquisition, processing and decision making with aid of micro controllers and advanced processors. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Recall the basics of processor, its ways of addressing data for operation by instruction set. 2. Execute basic and advanced assembly language programs. 3. Learn the ways to interface I/O devices with processor for task sharing. 4. Recall the basics of co-processor and its ways to handle float values by its instruction set. 5. Recognize the functionality of micro controller, latest version processors and its applications. 6. Acquire design thinking capability, ability to design a component with realistic constraints, to solve real world engineering problems and analyze the results. 									
Student Learning Outcomes (SLO): 2, 5, 9									
2.Having a clear understanding of the subject related concepts and of contemporary issues									
5.Having design thinking capability									
9.Having problem solving ability- solving social issues and engineering problems									
Module:1	INTRODUCTION TO 8086 MICROPROCESSOR				6 hours				
Introduction to 8086, Pin diagram, Architecture, addressing mode and Instruction set									
Module:2	INTRODUCTION TO ALP				5 hours				
Tools- Assembler Directives, Editor, assembler, debugger, simulator and emulator. E.g., ALP Programs-Arithmetic Operations and Number System Conversions, Programs using Loops, If then else, for loop structures									
Module:3	Advanced ALP				2 hours				
Interrupt programming using DOS BIOS function calls, File Management									
Module:4	Introduction to Peripheral Interfacing-I				5 hours				
PPI 8255, Timer 8253, Interrupt controller-8259									
Module:5	Introduction to Peripheral Interfacing-II				4 hours				
IC 8251 UART, Data converters (A/D and D/A Converter), seven segment display and key- board interfacing									
Module:6	Co-Processor				4 hours				
Introduction to 8087, Architecture, Instruction set and ALP Programming									
Module:7	Introduction to Arduino Boards				2 hours				
Introduction to Microcontroller- Quark SOC processor, programming, Arduino Boards using GPIO (LED, LCD, Keypad, Motor control and sensor), System design application and case study.									

Module:8	Contemporary issues	2 hours	
Architecture of one of the advanced processors such as Multicore, Snapdragon, ARM processor in iPad			
		Total Lecture hours:	30 hours
Text Book(s)

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	Arithmetic operations 8/16 bit using different addressing modes.	2.5 hours	
2.	Finding the factorial of an 8 /16 bit number.	2.5 hours	
3.	(a) Solving nCr and nPr (b) Compute nCr and nPr using recursive procedure. Assume that n and r are non-negative integers	2.5 hours	
4.	Assembly language program to display Fibonacci series	2.5 hours	
5.	Sorting in ascending and descending order	2.5 hours	
6.	(a) Search a given number or a word in an array of given numbers. (b) Search a key element in a list of n 16-bit numbers using the Binary search algorithm.	2.5 hours	
7.	To find the smallest and biggest numbers in a given array.	2.5 hours	
8.	ALP for number system conversions.	2.5 hours	
9.	(a) String operations(String length, reverse, comparison, concatenation, palindrome)	2.5 hours	
10.	ALP for Password checking	2.5 hours	
11.	Convert a 16-bit binary value (assumed to be an unsigned integer) to BCD and display it from left to right and right to left for specified number of times	2.5 hours	
12.	ALP to interface Stepper motor using 8086/ Intel Galileo Board	2.5 hours	
		Total Laboratory Hours	30 hours

CSE3009	INTERNET OF THINGS				L	T	P	J	C	
					3	0	0	4	4	
Pre-requisite	NIL	Syllabus version								
									v1.0	
Course Objectives:										
<ol style="list-style-type: none"> 1. To apprise students with basic knowledge of IoT that paves a platform to understand physical, logical design and business models 2. To teach a student how to analyze requirements of various communication models and protocols for cost-effective design of IoT applications on different IoT platforms. 3. To explain the students how to code for an IoT application and deploy for real-time scenario. 										
Expected Course Outcome:										
<ol style="list-style-type: none"> 1. Describe various layers of IoT protocol stack and describe protocol functionalities. 2. Evaluate efficiency trade-offs among alternative communication models for an efficient IoT application design. 3. Comprehend advanced IoT applications and technologies from the basics of IoT. 4. Understand working principles of various sensor for different IoT platforms. 5. Estimate the cost of hardware and software for low cost design IoT applications. 6. Compare various application business models of different domains. 7. Solve real-time problems and demonstrate IoT applications in various domains using prototype models. 										
Student Learning Outcomes (SLO): 2, 5, 6										
<ol style="list-style-type: none"> 2. Having a clear understanding of the subject related concepts and of contemporary issues 5. Having design thinking capability 6. Having an ability to design a component or a product applying all the relevant standards and with realistic constraints. 										
Module:1	Introduction To Internet of Things							5 hours		
Definition & Characteristics of IoT - Challenges and Issues - Physical Design of IoT, Logical Design of IoT - IoT Functional Blocks, Security.										
Module:2	Components In Internet of Things							7 hours		
Control Units Communication modules Bluetooth Zigbee Wifi GPS- IOT Protocols (IPv6, 6LoWPAN, RPL, CoAP etc), MQTT, Wired Communication, Power Sources.										
Module:3	Technologies Behind IoT							7 hours		
Four pillars of IOT paradigm, - RFID, Wireless Sensor Networks, SCADA (Supervisory Control and Data Acquisition), M2M - IOT Enabling Technologies - BigData Analytics, Cloud Computing, Embedded Systems.										
Module:4	Programming The Microcontroller For IoT							8 hours		
Working principles of sensors IOT deployment for Raspberry Pi /Arduino /Equivalent platform Reading from Sensors, Communication: Connecting microcontroller with mobile devices, communication through Bluetooth, wifi and USB - Contiki OS- Cooja Simulator.										
Module:5	Resource Management in IoT							4 hours		
Clustering, Clustering for Scalability, Clustering Protocols for IOT.										
Module:6	From The Internet Of Things To The Web Of Things							6 hours		
The Future Web of Things Set up cloud environment Cloud access from sensors Data Analytics for IOT- Case studies- Open Source e-Health sensor platform Be Close Elderly monitoring Other recent										

projects.			
Module:7	IoT Applications	6 hours	
Business models for the internet of things, Smart city, smart mobility and transport, smart buildings and infrastructure, smart health, environment monitoring and surveillance.			
Module:8	Recent Trends	2 hours	
Total Lecture hours:		45 hours	
Text Book(s)			
1.	Dieter Uckelmann et.al, Architecting the Internet of Things, Springer, 2011

CSE3013	ARTIFICIAL INTELLIGENCE	L	T	P	J	C
		3	0	0	4	4
Pre-requisite	NIL	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To impart artificial intelligence principles, techniques and its history 2. To assess the applicability, strengths, and weaknesses of the basic knowledge representation, problem solving, and learning methods in solving engineering problems 3. To develop intelligent systems by assembling solutions to concrete computational problems 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Evaluate Artificial Intelligence (AI) methods and describe their foundations. 2. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation and learning. 3. Demonstrate knowledge of reasoning and knowledge representation for solving real world problems 4. Analyze and illustrate how search algorithms play vital role in problem solving 5. Illustrate the construction of learning and expert system 6. Discuss current scope and limitations of AI and societal implications. 						
Student Learning Outcomes (SLO): 1, 7, 17						
<ol style="list-style-type: none"> 1. Having an ability to apply mathematics and science in engineering applications 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning) 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice 						
Module:1	Artificial Intelligence and its Issues	9 hours				
Definitions - Importance of AI, Evolution of AI - Applications of AI, Classification of AI systems with respect to environment, Knowledge Inferring systems and Planning, Uncertainty and towards Learning Systems.						
Module:2	Overview to Problem Solving	5 hours				
Problem solving by Search, Problem space - State space, Blind Search - Types, Performance measurement.						
Module:3	Heuristic Search	4 hours				
Types, Game playing mini-max algorithm, Alpha-Beta Pruning						
Module:4	Knowledge Representation and Reasoning	7 hours				
Logical systems Knowledge Based systems, Propositional Logic Constraints, Predicate Logic First Order Logic, Inference in First Order Logic, Ontological Representations and applications						
Module:5	Uncertainty and knowledge Reasoning	7 hours				
Overview Definition of uncertainty, Bayes Rule Inference, Belief Network, Utility Based System, Decision Network						
Module:6	Learning Systems	4 hours				
Forms of Learning Types - Supervised, Unsupervised, Reinforcement Learning, Learning Decision Trees						
Module:7	Expert Systems	7 hours				
Expert Systems - Stages in the development of an Expert System - Probability based Expert Systems						

- Expert System Tools - Difficulties in Developing Expert Systems - Applications of Expert Systems			
Module:8	Recent Trends	2 hours	
		Total Lecture hours:	45 hours
Text Book(s)

CSE4003	CYBER SECURITY				L	T	P	J	C	
					3	0	0	4	4	
Pre-requisite	Nil	Syllabus version								
									v. 1.0	
Course Objectives:										
1 To learn the concepts of number theory, cryptographic techniques.										
2.To understand integrity and authentication process.										
3.To familiarize various cyber threats, attacks, vulnerabilities, defensive mechanisms, security policies and practices.										
Expected Course Outcome:										
1 Know the fundamental mathematical concepts related to security.										
2.Implement the cryptographic techniques to real time applications.										
3.Comprehend the authenticated process and integrity, and its implementation										
4.Know fundamentals of cybercrimes and the cyber offenses.										
5.Realize the cyber threats, attacks, vulnerabilities and its defensive mechanism.										
6.Design suitable security policies for the given requirements.										
7.Exploring the industry practices and tools to be on par with the recent trends										
Student Learning Outcomes (SLO): 1,5,9										
1. Having an ability to apply mathematics and science in engineering applications										
5.Having design thinking capability										
9.Having problem solving ability- solving social issues and engineering problems										
Module:1	Introduction to Number Theory							6 hours		
Finite Fields and Number Theory: Modular arithmetic, Euclidian Algorithm, Primality Testing: Fermats and Eulers theorem, Chinese Remainder theorem, Discrete Logarithms										
Module:2	Cryptographic Techniques							9 hours		
Symmetric key cryptographic techniques: Introduction to Stream cipher, Block cipher: DES, AES,IDEA Asymmetric key cryptographic techniques: principles,RSA,ElGamal,Elliptic Curve cryptography, Key distribution and Key exchange protocols.										
Module:3	Integrity and Authentication							5 hours		
Hash functions,Secure Hash Algorithm (SHA)Message Authentication, Message Authentica- tion Code (MAC), Digital Signature Algorithm : RSA ElGamal based										
Module:4	Cybercrimes and cyber offenses							7 hours		
Classification of cybercrimes, planning of attacks, social engineering:Human based, Computer based: Cyberstalking, Cybercafe and Cybercrimes										
Module:5	Cyber Threats, Attacks and Prevention							9 hours		
Phishing, Password cracking, Keyloggers and Spywares, DoS and DDoS attacks, SQL Injection Identity Theft (ID) : Types of identity theft, Techniques of ID theft										
Module:6	Cybersecurity Policies and Practices							7 hours		
What security policies are: determining the policy needs, writing security policies, Internet and email security policies, Compliance and Enforcement of policies, Review										
Module:7	Recent Trends							2 hours		
Industry Expert talk										

	Total Lecture hours:	45 hours	
Text Book(s)			
1.	Cryptography and Network security, William Stallings, Pearson Education, 7th Edition, 2016		
2.	Cyber Security, Understanding cyber crimes, computer forensics and legal perspectives, Nina Godbole, Sunit Belapure, Wiley Publications, Reprint 2016		
3.	Writing Information Security Policies, Scott Barman, New Riders Publications, 2002		
Reference Books			
1.	Cybersecurity for Dummies, Brian Underdahl, Wiley, 2011		
2.	Cryptography and Network security, Behrouz A. Forouzan, Debdeep Mukhopadhyay, Mcgraw Hill Education, 2 nd Edition, 2011

CSE4019	IMAGE PROCESSING				L	T	P	J	C
					3	0	0	4	4
Pre-requisite	Nil				Syllabus version				
					v. 1.0				
Course Objectives:									
<p>1 To provide the basic knowledge on image processing concepts.</p> <p>2.To develop the ability to apprehend and implement various image processing algorithms.</p> <p>3.To facilitate the students to comprehend the contextual need pertaining to various image processing applications.</p>									
Expected Course Outcome:									
<p>1.Ascertain and describe the basics of image processing concepts through mathematical interpretation.</p> <p>2.Acquire the knowledge of various image transforms and image enhancement techniques involved.</p> <p>3.Demonstrate image restoration process and its respective filters required.</p> <p>4.Experiment the various image segmentation and morphological operations for a meaningful partition of objects.</p> <p>5.Design the various basic feature extraction and selection procedures and illustrate the various image compression techniques and their applications.</p> <p>6.Analyze and implement image processing algorithms for various real-time applications.</p>									
Student Learning Outcomes (SLO):					1,9,18				
<p>1.Having an ability to apply mathematics and science in engineering applications.</p> <p>9.Having problem solving ability- solving social issues and engineering problems.</p> <p>18.Having critical thinking and innovative skills.</p>									
Module:1	Introduction- Digital Image,its Representation				6 hours				
Image Representation and Image Processing Paradigm - Elements of digital image processing- Image model. Sampling and quantization-Relationships between pixels- Connectivity, Distance Measures between pixels - Color image (overview, various color models)-Various image formats bmp, jpeg, tiff, png, gif, etc.									
Module:2	Digital Image Properties- Operations on Digital Images				6 hours				
Topological Properties of Digital Images-Histograms, Entropy, Eigen Values-Image Quality Metrics- Noise in Images Sources, types. Arithmetic operations - Addition, Subtraction, Multi- plication, Division-Logical operations NOT, OR, AND, XOR-Set operators-Spatial operations Single pixel, neighbourhood, geometric-Contrast Stretching-Intensity slicing-Bit plane slicing Power Law transforms									
Module:3	Image Enhancement				6 hours				
Spatial and Frequency domain-Histogram processing-Spatial filtering-Smoothing spatial filters- Sharpening spatial filters- Discrete Fourier Transform-Discrete Cosine Transform-Haar Trans- form -Hough Transform-Frequency filtering-Smoothing frequency filters-Sharpening frequency filters- Selective filtering.									
Module:4	Digital Image Restoration- Digital Image Registration				7 hours				
Noise models - Degradation models-Methods to estimate the degradation-Image de-blurring- Restoration in the presence of noise only spatial filtering-Periodic noise reduction by frequency domain filtering-Inverse filtering-Wiener Filtering. Geometrical transformation-Point based methods- Surface based methods-Intensity based methods									
Module:5	Feature Extraction				6 hours				

Region of interest (ROI) selection - Feature extraction: Histogram based features - Intensity features-Color, Shape features-Contour extraction and representation-Homogenous region extraction and representation-Texture descriptors - Feature Selection: Principal Component Analysis (PCA).			
Module:6	Image Segmentation- Morphological Image Processing	6 hours	
Discontinuity detection-Edge linking and boundary detection.Thresholding-Region oriented segmentation- Histogram based segmentation.Object recognition based on shape descriptors.Dilation and Erosion-Opening and Closing-Medial axis transforms-Objects skeletons-Thinning boundaries.			
Module:7	Image Coding and Compression	6 hours	
Lossless compression versus lossy compression-Measures of the compression efficiency- Huffman coding-Bitplane coding-Shift codes-Block Truncation coding-Arithmetic coding-Predictive coding techniques-Lossy compression algorithm using the 2-D. DCT transform-The JPEG 2000 standard Baseline lossy JPEG, based on DWT.			
Module:8	Recent Trends	2 hours	
Industry Expert talk			
		Total Lecture hours:	45 hours
Text Book(s)			
1.	Rafael C. Gonzalez and Richard E. Woods, Digital Image Processing, Third Ed., Prentice-Hall, 2008.		
Reference Books

CSE4027	MOBILE PROGRAMMING				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	Nil				Syllabus version				
					v. 1.0				
Course Objectives:									
1. Students able to learn to write both web apps and native apps for Android using Eclipse and the Android SDK, to write native apps for iPhones, iPod Touches, and iPads using Xcode and the iOS SDK, and to write web apps for both platforms. The course also touches on Windows 8 application programming, so as to provide students with a stepping stone for application development in the mobile operating system of their choice. Additional topics covered include application deployment and availability on the corresponding app stores and markets, application security, efficient power management, and mobile device security									
Expected Course Outcome:									
1.Exposed to technology and business trends impacting mobile applications. 2.Competent with the characterization and architecture of mobile applications. 3.Competent with designing and developing mobile applications using one application development framework.									
Student Learning Outcomes (SLO): 1,6,10,15									
1. Having a clear understanding of the subject related concepts and of contemporary issues 6.Having an ability to design a component or a product applying all the relevant standards and with realistic constraints 10.Having a clear understanding of professional and ethical responsibility 15.Having an ability to use the social media effectively for productive use									
Module:1	Introduction to Mobile Devices				4 hours				
Mobile vs.desktop devices and architecture -Power Management-Screen resolution -Touch interfaces -Application deployment -App Store, Google Play, Windows Store -Development environments-XCode- Eclipse -VS2012-PhoneGAP-Native vs. web applications									
Module:2	HTML5/JS/CSS3				4 hours				
Quick recap of technologies -Mobile-specific enhancements -Browser- detection-Touch interfaces - Geolocation -Screen orientation-Mobile browser “interpretations”(Chrome/Safari/Gecko/IE)- Case studies().									
Module:3	Mobile OS Architecture				3 hours				
Comparing and Contrasting architectures of all three – Android, iOS and Windows-Underlying OS (Darwin vs. Linux vs. Win 8) -Kernel structure and native level programming -Runtime (Objective-C vs. Dalvik vsWinRT) -Approaches to power management - Security									
Module:4	Android/iOS/Win 8 Survival and basic				3 hours				
Building Application(iOS, Window, Android).- App structure, built-in Controls, file access, basic graphics Android/iOS/Win8 inbuilt APP- DB access, network access, contacts/photos									
Module:5	Underneath the frameworks				4 hours				
Native level programming on Android -Low-level programming on (jailbroken) iOS-Windows low level APIs									
Module:6	Power Management				4 hours				
Wake locks and assertions -Low-level OS support -Writing power-smart applications									
Module:7	Augmented Reality(AR) and Mobile				6 hours				

Security		
Web and AR-User interface-Mobile AR-evaluation of AR- standardization-GPS-Accelerometer - Camera -Mobile malware -Device protections - Mobile Security - overview of the current mobile threat landscape-An assessment of your current mobile security solution- complete analysis of your current risks- Recommendations on how to secure your company's mobile devices from advanced threats and targeted attacks		
Module:8	Recent Trends	2 hours
Industry Expert talk		
Total Lecture hours:		30 hours
Text Book(s)		
1.	Rajiv Ramnath, Roger Crawfis, and Paolo Sivilotti, Android SDK3 for Dummies,Wiley 2011.	
Reference Books		
1.	Valentino Lee, Heather Schneider, and Robbie Schell, Mobile Applications: Architecture, Design, and Development , Prentice Hall , 2004.	
2.	Brian Fling,Mobile Design and Development O'Reilly Media,2009	
3.	Maximiliano Firtman Programming the Mobile Web , O'Reilly Media, 2010.	
4.	Christian Crumlish and Erin Malone Designing Social Interfaces, O'Reilly Media , 2009	
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
List of Challenging Experiments (Indicative)		
1.	<ol style="list-style-type: none"> 1. Get the HelloVIT midlet on the "getting started" page working. 2. Make some changes - e.g. the text of the String item. 3. Put in an error - e.g. divide by zero, to see how the development environment attempts to point out on the PC when a runtime error occurs on the phone emulator. 4. Get the MIDlet "First MIDlet Program" in the handout working (ok, so it's really our second MIDlet). Copy the code from the handout. 5. Modify the MIDlet by adding these additional items to the form e.g. TextField, DateField, Gauge. Look up the lcdui package to see what Items can be added and the parameters needed.. 6. You can output to the PC console while the program is running e.g. place this code in the constructor: <i>System.out.println("in Constructor"); // This will ouput on the PC console, not on the phone</i> 7. Now add :<i>System.out.println("in CommandAction method");</i> to the Command Action method to see when that method is running. 8. Add more<i>System.out.println</i>'sin the following methods: <ol style="list-style-type: none"> 1. startApp 2. pauseApp 3. destroyApp 9. Note the sequence of method calls from MIDlet start to end. 	4 Hours
2	<p>First MIDlet - adding a new command</p> <ol style="list-style-type: none"> 1. Continue to add to 2.0 First MIDlet by adding an "OK" command (look up the API command class) 2. Have the"OK" command display on the phone's screen. 3. Add code to process the "OK" command 4. In the actionCommand method display the contents of the TextField using System.out.println () 5. Add two more commands e.g. Send, Spell Check. 6. Where were they placed? 	4 Hours

	<p>7. Add code to check for these commands - add System.out.println's to show when that code is being executed.</p> <p>8. Now use System.out.println in the OK processing code and see the text being modified while the program runs.</p> <p>9. Add another System.out.println in the OK to display the value of the gauge (if it's not interactive, go back to the API to see how to make it interactive)</p>	
3	<p>Additon MIDlet</p> <p>1. Create a MIDlet that allows you to enter a number. The number is then added to any previous number and the running total result is displayed. Use a TextBox to receive text from the user (instead of a Form as in the previous example).</p> <p>2. Can you crash the program by entering text instead of numbers? If you can then constrain the user input to numbers only.</p>	4 Hours
4	<p>Additon MIDlet on a real phone</p> <p>1. For the addition MIDlet : Use the IDE to Create a JAR file.</p> <p>2. (Optionally) Transfer the JAR file to you phone and test. See handout on how to create and deploy a JAR file.</p>	4 Hours
5	<p>Battery Status</p> <p>Create an MIDlet that displays a coloured bar to display a car battery's status. The battery voltage is entered into the MIDlet as a floating point number. Display a bar graph as follows: 0-9.5 - Red (battery dead) >9.6 <12 - Yellow (battery poor) >12 <14.4 - Green (battery good) >14.4 - Blue (Alternator faulty)</p>	4 Hours
6	<p>Secret Text</p> <p>Develop an MIDlet that has a TextField and Label GUI components. When a piece of text is entered the MIDlet 'encrypts' the text by replacing each letter using the following mapping: MLKJIHGFEDCBA NOPQRSTUVWXYZ So A -> Z, N-> M, B-> Y, O->L etc Display the encrypted text back in the TextField (so pressing enter should give you back the original text). Display the length of the entered text using the Label.</p> <p>Develop an MIDlet that has a TextField and Label GUI components. When a piece of text is entered the MIDlet 'encrypts' the text by replacing each letter using the following mapping: MLKJIHGFEDCBA NOPQRSTUVWXYZ So A -> Z, N-> M, B-> Y, O->L etc Display the encrypted text back in the TextField (so pressing enter should give you back the original text). Display the length of the entered text using the Label.</p>	5 Hours
7	<p>Missing Letter Game</p> <p>Develop an MIDlet or application that displays a word at random with a random letter(s) missing. The user has to guess the missing letter(s) by entering it/them into a text field(s). You can use an array or vector to store some words internally in the program.</p>	5 hours
Total Laboratory Hours		30 hours
Mode of assessment: Project/Activity		
Recommended by Board of Studies	13-05-2016	
Approved by Academic Council	No. 41	Date 17-06-2016

MGT1010	TOTAL QUALITY MANAGEMENT				L	T	P	J	C
					2	1	0	0	3
Pre-requisite	Nil				Syllabus version				
					v.1.1				
Course Objectives: To develop the ability to									
<ol style="list-style-type: none"> 1. Learn the concepts of quality and quality management 2. Apply and improve process capability using total quality management principles 3. Understanding the need and importance of quality assurance and certification 									
Expected Course Outcome: On the completion of this course the student will be able to:									
<ol style="list-style-type: none"> 1. Know and understand the basic principles of quality, evolution of quality concepts. 2. Understanding the significance of Quality works and apply them in the current scenario. 3. Know statistical tools required to do scientific analysis and improvement of business. 4. Apply and evaluate quality tools to solve real time problems. 5. Know business models and be able to assess organizational performance. 6. Confirm to quality standards and implementing QMS in business organisation 									
Student Learning Outcomes (SLO): 1,2,4,6,7,9,10,14,18									
Module:1	Introduction				5 Hours				
Concept of Quality and Quality Management; Determinants of quality of product & service; Quality vs. Reliability; Philosophies of Quality Gurus; Juran's Quality Trilogy; strategic Impact of Quality management on Business Performance; Quality statements – vision, mission, Policy; SMART goal setting;									
Module:2	Quality Cost				4 Hours				
Juran's concept of quality cost; components of Quality Cost; Crosby's concept of „quality is free; Quality-Cost optimization; Quality Index; Quality-Productivity Ratio; Quality Planning									
Module:3	Quality Control				7 Hours				
Statistical Quality Control – Inspection, Sampling, Sample Size, Sampling Plan, AQL, OC curve, Producer Risk, Consumer Risk, AOQ, AOQL, Control Charts & Control Limits – X, R & S charts and their application; causes of variations – Assignable & Random; Runs-Test, Chart-Sensitivity Test and Run-Sum Test; Normal-Distribution curve and concept of Six Sigma;									
Module:4	Process Capability				6 Hours				
Concept, nature, process and significance, Principles of an organization, Span of Control, Departmentation, Types of an organization, Authority- Responsibility, Delegation and Decentralization, Formal and Informal Organization. Controlling									
Module:5	Total Quality Management				5 Hours				
Recruitment, Selection, Training, Promotion, Transfers and Demotion Directing: Meaning, Principles of Direction; Elements of Direction.									
Module:6	Tools & Techniques of TQM				7 Hours				
Motivation concept, techniques to increase motivation. Leading as a function of management, Leadership traits, Leadership styles Coordinating: Meaning, Features and Coordination, Principles of Coordination.									
Module:7	QMS				7 Hours				
Nature and Scope of control; Types of Control; Control process; Control Techniques – traditional and modern; Effective Control System.									

Decision Making Process: Meaning, Decision Making Process.			
Module:8	Contemporary issues:	2 Hours	
		Total Lecture	45 hours

		3	0	0	4	4
Pre-requisite	Nil	Syllabus version				
		v.1.0				
Course Objectives: To develop the ability to						
<ol style="list-style-type: none"> 1. Development Product development 2. Understand management techniques 3. Understand entrepreneurial functions . 						
Expected Course Outcome: On the completion of this course the student will be able to:						
<ol style="list-style-type: none"> 1. Understand the steps in product design 2. Familiarize with the product development process 3. Calculate financial feasibility of product 4. Understand management techniques 5. Lean concepts of entrepreneurial aspects 6. Understand small business management 						
Student Learning Outcomes (SLO):		2,6,7,9,10				
Module:1	Product Design	7 Hours				
Concept generation - Product Architecture - Industrial Design Process - Management of Industrial design Process and Assessing the quality of Industrial Design - Establishing the product specification						
Module:2	Product Development	8 Hours				
Criteria for selection of product - Product development process - Design for Manufacture - Estimate the manufacturing cost - Reduce the support cost – Prototyping - Economics of Product development projects.						
Module:3	Product Economic Feasibility	6 Hours				
Elements of Economic analysis - financial models - Sensitive analysis and influence of the quantitative factors.						
Module:4	Management Techniques	7 Hours				
Technology Management - Scientific Management- Development of Management - Principles of Management - Functions of management – planning - organization - Directing, Staffing and						
Module:5	Entrepreneurial Competence	7 Hours				
Management by objective - SWOT analysis - Enterprise Resource planning and supply chain management. Concept of Entrepreneurship						
Module:6		3 Hours				
Entrepreneurship as a career - Personality Characteristic a successful Entrepreneur - Knowledge and skill required for an Entrepreneur						
Module:7	Management of Small Business	5 Hours				
Pre-feasibility study - Ownership - budgeting - project profile preparation- Feasibility Report preparation - Evaluation Criteria - Market and channel selection - Product launching - Monitoring and Evaluation of Business - Effective Management of Small business.						
Module:8	Contemporary issues:	2 Hours

					3	0	0	4	4
Pre-requisite	Nil				Syllabus version				
					v.1.0				
Course Objectives: To develop the ability to									
1. Explore and understand the need of study on Marketing									
2. Apply the acquired skill in to real world problems									
3. Utilize marketing management tools for competitive advantage									
Expected Course Outcome: On the completion of this course the student will be able to:									
1. Understand the basic principles, theories, concepts and dynamics of Marketing.									
2. Apply these principles and tools in case analysis and to practical business decision making									
3. Ability to prepare a comprehensive marketing plan.									
4. Appreciate and learn more about Marketing as a career.									
5. Understand and apply market segmentations									
6. Measure marketing performance metrics									
Student Learning Outcomes (SLO): 1,2,3, 4, 5, 6,7, 9,10, 11,12,13,16, 17									
Module:1	Introduction and overview				6 Hours				
Definitions of Marketing, Marketing Vs selling, history of business orientations, meaning of exchange and value, types of market and ethics in marketing.									
Module:2	Analyzing Marketing Environment				6 Hours				
SWOT Analysis, types of Environment (Micro and Macro) and Porter ' s industry analysis									
Module:3	Consumer Behaviour				8 Hours				
Understanding consumer behaviour , consumer buying decision process, types of consumer buying behaviour , and organizational buyer behaviour									
Module:4	Segmentation, Targeting and Positioning				7 Hours				
Levels of segmentation, identification of bases of segmentation, evaluation of segment attractiveness, targeting one or more segment based on attractiveness, and positioning the product through different positioning strategies.									
Module:5	Four Ps: Product				6 Hours				
Product classifications, product levels, product line and mix concept , product life cycle, Ansoff matrix, BCG mat r ix, branding, packaging and new product development ; Price: Pricing policies and strategic pricing method;									
Module:6	Place				6 Hours				
Different types of distribution channels ,importance of channel member relationship; Promotion: Integrating marketing communications – advertising, sales promotion, direct marketing, online marketing and public relations									
Module:7	Marketing Plan				4 Hours				
Complete marketing plan including executive summary, environment analysis, objectives, marketing strategy, marketing mix, implementation, financial requirement and control									
Module:8	Contemporary issues:				2 Hours

UNIVERSITY CORE

CHY1002	ENVIRONMENTAL SCIENCES	L	T	P	J	C
		3	0	0	0	3
Pre-requisite		Syllabus version				
		V:1.1				
Course Objectives:						
<ol style="list-style-type: none"> 1. To make students understand and appreciate the unity of life in all its forms, the implications of life style on the environment. 2. To understand the various causes for environmental degradation. 3. To understand individuals contribution in the environmental pollution. 4. To understand the impact of pollution at the global level and also in the local environment. 						
Expected Course Outcome: Students will be able to						
<ol style="list-style-type: none"> 1. Students will recognize the environmental issues in a problem oriented interdisciplinary perspectives 2. Students will understand the key environmental issues, the science behind those problems and potential solutions. 3. Students will demonstrate the significance of biodiversity and its preservation 4. Students will identify various environmental hazards 5. Students will design various methods for the conservation of resources 6. Students will formulate action plans for sustainable alternatives that incorporate science, humanity, and social aspects 7. Students will have foundational knowledge enabling them to make sound life decisions as well as enter a career in an environmental profession or higher education. 						
Student Learning Outcomes (SLO):		1,2,3,4,5,9,11,12				
<ol style="list-style-type: none"> 1. Having an ability to apply mathematics and science in engineering applications 2. Having a clear understanding of the subject related concepts and of contemporary issues 3. Having an ability to be socially intelligent with good SIQ (Social Intelligence Quotient) and EQ (Emotional Quotient) 4. Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking skills which cannot be codified) 5. Having design thinking capability 9. Having problem solving ability- solving social issues and engineering problems 11. Having interest in lifelong learning 12. Having adaptive thinking and adaptability 						
Module:1	Environment and Ecosystem	7 hours				
Key environmental problems, their basic causes and sustainable solutions. IPAT equation. Ecosystem, earth – life support system and ecosystem components; Food chain, food web, Energy flow in ecosystem; Ecological succession- stages involved, Primary and secondary succession, Hydrarch, mesarch, xerarch; Nutrient, water, carbon, nitrogen, cycles; Effect of human activities on these cycles.						
Module:2	Biodiversity	6 hours				
Importance, types, mega-biodiversity; Species interaction - Extinct, endemic, endangered and rare species; Hot-spots; GM crops- Advantages and disadvantages; Terrestrial biodiversity and Aquatic biodiversity – Significance, Threats due to natural and anthropogenic activities and Conservation methods.						

Module:3	Sustaining Natural Resources and Environmental Quality	7 hours
Environmental hazards – causes and solutions. Biological hazards – AIDS, Malaria, Chemical hazards- BPA, PCB, Phthalates, Mercury, Nuclear hazards- Risk and evaluation of hazards. Water footprint; virtual water, blue revolution. Water quality management and its conservation. Solid and hazardous waste – types and waste management methods.		
Module:4	Energy Resources	6 hours
Renewable - Non renewable energy resources- Advantages and disadvantages - oil, Natural gas, Coal, Nuclear energy. Energy efficiency and renewable energy. Solar energy, Hydroelectric power, Ocean thermal energy, Wind and geothermal energy. Energy from biomass, solar- Hydrogen revolution.		
Module:5	Environmental Impact Assessment	6 hours
Introduction to environmental impact analysis. EIA guidelines, Notification of Government of India (Environmental Protection Act – Air, water, forest and wild life). Impact assessment methodologies. Public awareness. Environmental priorities in India.		
Module:6	Human Population Change and Environment	6 hours
Urban environmental problems; Consumerism and waste products; Promotion of economic development – Impact of population age structure – Women and child welfare, Women empowerment. Sustaining human societies: Economics, environment, policies and education.		
Module:7	Global Climatic Change and Mitigation	5 hours
Climate disruption, Green house effect, Ozone layer depletion and Acid rain. Kyoto protocol, Carbon credits, Carbon sequestration methods and Montreal Protocol. Role of Information technology in environment-Case Studies.		
Module:8	Contemporary issues	2 hours
Lecture by Industry Experts		
	Total Lecture hours:	45 hours
Text Books

Mode of evaluation: Internal Assessment (CAT, Quizzes, Digital Assignments) & FAT		
Recommended by Board of Studies	12.08.2017	
Approved by Academic Council	No. 46	Date 24.08.2017

CHY1701	ENGINEERING CHEMISTRY	L	T	P	J	C
		3	0	2	0	4
Pre-requisite		Syllabus version				
		1.1				
Course Objectives:						
1. To impart technological aspects of applied chemistry						
2. To lay foundation for practical application of chemistry in engineering aspects						
Expected Course Outcomes (CO): Students will be able to						
1. Recall and analyze the issues related to impurities in water and their removal methods and apply recent methodologies in water treatment for domestic and industrial usage						
2. Evaluate the causes of metallic corrosion and apply the methods for corrosion protection of metals						
3. Evaluate the electrochemical energy storage systems such as lithium batteries, fuel cells and solar cells, and design for usage in electrical and electronic applications						
4. Assess the quality of different fossil fuels and create an awareness to develop the alternative fuels						
5. Analyze the properties of different polymers and distinguish the polymers which can be degraded and demonstrate their usefulness						
6. Apply the theoretical aspects: (a) in assessing the water quality; (b) understanding the construction and working of electrochemical cells; (c) analyzing metals, alloys and soil using instrumental methods; (d) evaluating the viscosity and water absorbing properties of polymeric materials						
Student Learning Outcomes involved: 1,2,14						
1. Having an ability to apply mathematics and science in engineering applications						
2. Having a clear understanding of the subject related concepts and of contemporary issues						
14. Having an ability to design and conduct experiments, as well as to analyze and interpret data						
Module:1	Water Technology	5 hours				
Characteristics of hard water - hardness, DO, TDS in water and their determination – numerical problems in hardness determination by EDTA; Modern techniques of water analysis for industrial use - Disadvantages of hard water in industries.						
Module:2	Water Treatment	8 hours				
Water softening methods: - Lime-soda, Zeolite and ion exchange processes and their applications. Specifications of water for domestic use (ICMR and WHO); Unit processes involved in water treatment for municipal supply - Sedimentation with coagulant- Sand Filtration - chlorination; Domestic water purification – Candle filtration- activated carbon filtration; Disinfection methods- Ultrafiltration, UV treatment, Ozonolysis, Reverse Osmosis; Electro dialysis.						
Module:3	Corrosion	6 hours				
Dry and wet corrosion - detrimental effects to buildings, machines, devices & decorative art forms, emphasizing Differential aeration, Pitting, Galvanic and Stress corrosion cracking; Factors that enhance corrosion and choice of parameters to mitigate corrosion.						
Module:4	Corrosion Control	4 hours				
Corrosion protection - cathodic protection – sacrificial anodic and impressed current protection methods; Advanced protective coatings: electroplating and electroless plating, PVD and CVD.						

Alloying for corrosion protection – Basic concepts of Eutectic composition and Eutectic mixtures - Selected examples – Ferrous and non-ferrous alloys.		
Module:5	Electrochemical Energy Systems	6 hours
Brief introduction to conventional primary and secondary batteries; High energy electrochemical energy systems: Lithium batteries – Primary and secondary, its Chemistry, advantages and applications. Fuel cells – Polymer membrane fuel cells, Solid-oxide fuel cells- working principles, advantages, applications. Solar cells – Types – Importance of silicon single crystal, polycrystalline and amorphous silicon solar cells, dye sensitized solar cells - working principles, characteristics and applications.		
Module:6	Fuels and Combustion	8 hours
Calorific value - Definition of LCV, HCV. Measurement of calorific value using bomb calorimeter and Boy's calorimeter including numerical problems. Controlled combustion of fuels - Air fuel ratio – minimum quantity of air by volume and by weight- Numerical problems-three way catalytic converter- selective catalytic reduction of NO _x ; Knocking in IC engines-Octane and Cetane number - Antiknocking agents.		
Module:7	Polymers	6 hours
Difference between thermoplastics and thermosetting plastics; Engineering application of plastics - ABS, PVC, PTFE and Bakelite; Compounding of plastics: moulding of plastics for Car parts, bottle caps (Injection moulding), Pipes, Hoses (Extrusion moulding), Mobile Phone Cases, Battery Trays, (Compression moulding), Fibre reinforced polymers, Composites (Transfer moulding), PET bottles (blow moulding); Conducting polymers- Polyacetylene- Mechanism of conduction – applications (polymers in sensors, self-cleaning windows)		
Module:8	Contemporary issues:	2 hours
Lecture by Industry Experts		
	Total Lecture hours:	45 hours

Mode of Evaluation: Internal Assessment (CAT, Quizzes, Digital Assignments) & FAT		
List of Experiments		
	Experiment title	Hours
1.	Water Purification: Estimation of water hardness by EDTA method and its removal by ion-exchange resin	1 h 30 min
2.	Water Quality Monitoring: Assessment of total dissolved oxygen in different water samples by	3 h

3.	Winkler's method Estimation of sulphate/chloride in drinking water by conductivity method	
4/5	Material Analysis: Quantitative colorimetric determination of divalent metal ions of Ni/Fe/Cu using conventional and smart phone digital-imaging methods	3h
6.	Analysis of Iron in carbon steel by potentiometry	1 h 30 min
7.	Construction and working of an Zn-Cu electrochemical cell	1 h 30 min
8.	Determination of viscosity-average molecular weight of different natural/synthetic polymers	1 h 30 min
9.	Arduino microcontroller based sensor for monitoring pH/temperature/conductivity in samples.	1 h 30 min
Total Laboratory Hours		17 hours
Mode of Evaluation: Viva-voce and Lab performance & FAT

Course code	PROBLEM SOLVING AND PROGRAMMING					L	T	P	J	C
CSE1001						0	0	6	0	3
Pre-requisite	NIL					Syllabus version				
						v1.0				
Course Objectives:										
1. To develop broad understanding of computers, programming languages and their generations										
2. Introduce the essential skills for a logical thinking for problem solving										
3. To gain expertise in essential skills in programming for problem solving using computer										
Expected Course Outcome:										
1. Understand the working principle of a computer and identify the purpose of a computer programming language.										
2. Learn various problem solving approaches and ability to identify an appropriate approach to solve the problem										
3. Differentiate the programming Language constructs appropriately to solve any problem										
4. Solve various engineering problems using different data structures										
5. Able to modulate the given problem using structural approach of programming										
6. Efficiently handle data using flat files to process and store data for the given problem										
Student Learning Outcomes (SLO): 1, 12, 14										
1. Having an ability to apply mathematics and science in engineering applications										
12. Having adaptive thinking and adaptability										
14. Having an ability to design and conduct experiments, as well as to analyze and interpret data										
List of Challenging Experiments (Indicative)										
1	Steps in Problem Solving Drawing flowchart using yEd tool/Raptor Tool							4 Hours		
2	Introduction to Python, Demo on IDE, Keywords, Identifiers, I/O Statements							4 Hours		
3	Simple Program to display Hello world in Python							4 Hours		
4	Operators and Expressions in Python							4 Hours		
5	Algorithmic Approach 1: Sequential							4 Hours		
6	Algorithmic Approach 2: Selection (if, elif, if.. else, nested if else)							4 Hours		
7	Algorithmic Approach 3: Iteration (while and for)							6 Hours		
8	Strings and its Operations							6 Hours		
9	Regular Expressions							6 Hours		
10	List and its operations							6 Hours		
11	Dictionaries: operations							6 Hours		
12	Tuples and its operations							6 Hours		
13	Set and its operations							6 Hours		
14	Functions, Recursions							6 Hours		
15	Sorting Techniques (Bubble/Selection/Insertion)							6 Hours		
16	Searching Techniques : Sequential Search and Binary Search							6 Hours		
17	Files and its Operations							6 Hours		
							Total hours:	90 hours

CSE1002	PROBLEM SOLVING AND OBJECT ORIENTED PROGRAMMING	L	T	P	J	C
		0	0	6	0	3
Pre-requisite	Nil	Syllabus version				
		v. 1.0				
Course Objectives:						
1. To emphasize the benefits of object oriented concepts. 2.To enable students to solve the real time applications using object oriented programming features 3.To improve the skills of a logical thinking and to solve the problems using any processing elements						
Expected Course Outcome:						
1. Demonstrate the basics of procedural programming and to represent the real world entities as programming constructs. 2.Enumerate object oriented concepts and translate real-world applications into graphical representations. 3.Demonstrate the usage of classes and objects of the real world entities in applications. 4.Discriminate the reusability and multiple interfaces with same functionality based features to solve complex computing problems. 5.Illustrate possible error-handling constructs for unanticipated states/inputs and to use generic programming constructs to accommodate different datatypes. 6.Validate the program against file inputs towards solving the problem..						
Student Learning Outcomes (SLO):		1,9,17				
1.Having an ability to apply mathematics and science in engineering applications. 9.Having problem solving ability- solving social issues and engineering problems. 17.Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice.						
List of Challenging Experiments (Indicative)						
1.	Postman Problem A postman needs to walk down every street in his area in order to deliver the mail. Assume that the distances between the streets along the roads are given. The postman starts at the post office and returns back to the post office after delivering all the mails. Implement an algorithm to help the post man to walk minimum distance for the purpose.	10 hours				
2.	Budget Allocation for Marketing Campaign A mobile manufacturing company has got several marketing options such as Radio advertisement campaign, TV non peak hours campaign, City top paper network, Viral marketing campaign, Web advertising. From their previous experience, they have got a statistics about paybacks for each marketing option. Given the marketing budget (rupees in crores) for the current year and details of paybacks for each option, implement an algorithm to determine the amount that shall spent on each marketing option so that the company attains the maximum profit.	15 hours				
3.	Missionaries and Cannibals Three missionaries and three cannibals are on one side of a river, along with a boat that can hold one or two people. Implement an algorithm to find a way to get everyone to the other side of the river, without ever leaving a group of missionaries in one place outnumbered by the cannibals in that place.	10 hours				
4.	Register Allocation Problem A register is a component of a computer processor that can hold any type of	15 hours				

	<p>data and can be accessed faster. As registers are faster to access, it is desirable to use them to the maximum so that the code execution is faster. For each code submitted to the processor, a register interference graph (RIG) is constructed. In a RIG, a node represents a temporary variable and an edge is added between two nodes (variables) t1 and t2 if they are live simultaneously at some point in the program. During register allocation, two temporaries can be allocated to the same register if there is no edge connecting them. Given a RIG representing the dependencies between variables in a code, implement an algorithm to determine the number of registers required to store the variables and speed up the code execution</p>	
5.	<p>Selective Job Scheduling Problem A server is a machine that waits for requests from other machines and responds to them. The purpose of a server is to share hardware and software resources among clients. All the clients submit the jobs to the server for execution and the server may get multiple requests at a time. In such a situation, the server schedule the jobs submitted to it based on some criteria and logic. Each job contains two values namely time and memory required for execution. Assume that there are two servers that schedules jobs based on time and memory. The servers are named as Time Schedule Server and memory Schedule Server respectively. Design a OOP model and implement the time Schedule Server and memory Schedule Server. The Time Schedule Server arranges jobs based on time required for execution in ascending order whereas memory Schedule Server arranges jobs based on memory required for execution in ascending order</p>	15 hours
6.	<p>Fragment Assembly in DNA Sequencing DNA, or deoxyribonucleic acid, is the hereditary material in humans and almost all other organisms. The information in DNA is stored as a code made up of four chemical bases: adenine (A), guanine (G), cytosine (C), and thymine (T). In DNA sequencing, each DNA is sheared into millions of small fragments (reads) which assemble to form a single genomic sequence (superstring). Each read is a small string. In such a fragment assembly, given a set of reads, the objective is to determine the shortest superstring that contains all the reads. For example, given a set of strings, 000, 001, 010, 011, 100, 101, 110, 111 the shortest superstring is 0001110100. Given a set of reads, implement an algorithm to find the shortest superstring that contains all the given reads.</p>	15 hours
7.	<p>House Wiring An electrician is wiring a house which has many rooms. Each room has many power points in different locations. Given a set of power points and the distances between them, implement an algorithm to find the minimum cable required.</p>	10 hours
Total Laboratory Hours		90 hours

CSE3099	INDUSTRIAL INTERNSHIP				L	T	P	J	C	
		0	0	0	0	0	0	0	2	
Pre-requisite	Completion of minimum of Two semesters									
Course Objectives:										
The course is designed so as to expose the students to industry environment and to take up on-site assignment as trainees or interns.										
Expected Course Outcome:										
At the end of this internship the student should be able to:										
<ol style="list-style-type: none"> 1. Have an exposure to industrial practices and to work in teams 2. Communicate effectively 3. Understand the impact of engineering solutions in a global, economic, environmental and societal context 4. Develop the ability to engage in research and to involve in life-long learning 5. Comprehend contemporary issues 6. Engage in establishing his/her digital footprint 										
Student Learning Outcomes (SLO):					2, 9, 11, 13, 16					
<ol style="list-style-type: none"> 2. Having a clear understanding of the subject related concepts and of contemporary issues 9. Having problem-solving ability solving social issues and engineering problems 11. Having interest in lifelong learning 13. Having cross-cultural competency exhibited by working in teams 16. Having a good working knowledge of communicating in English 										
Contents							4	Weeks		
Four weeks of work at industry site. Supervised by an expert at the industry.										
Mode of Evaluation: Internship Report, Presentation and Project Review

Approved by Academic Council					No. 37	Date	16-06-2015			

CSE3999	TECHNICAL ANSWERS FOR REAL WORLD PROBLEMS (TARP)				L	T	P	J	C
					1	0	0	8	3
Pre-requisite	PHY1999 and 115 Credits Earned				Syllabus version				
					1.0				
Course Objectives:									
<ul style="list-style-type: none"> To help students to identify the need for developing newer technologies for industrial / societal needs To train students to propose and implement relevant technology for the development of the prototypes / products To make the students learn to the use the methodologies available for analysing the developed prototypes / products 									
Expected Course Outcome:									
<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> Identify real life problems related to society Apply appropriate technology(ies) to address the identified problems using engineering principles and arrive at innovative solutions 									
Student Learning Outcomes (SLO): 9, 18									
[9] Having problem-solving ability solving social issues and engineering problems									
[18] Having critical thinking and innovative skills									
Module:1 15 hours									
<ol style="list-style-type: none"> Identification of real life problems Field visits can be arranged by the faculty concerned 6 – 10 students can form a team (within the same / different discipline) Minimum of eight hours on self-managed team activity Appropriate scientific methodologies to be utilized to solve the identified issue Solution should be in the form of fabrication/coding/modeling/product design/process design/relevant scientific methodology(ies) Consolidated report to be submitted for assessment Participation, involvement and contribution in group discussions during the contact hours will be used as the modalities for the continuous assessment of the theory component Project outcome to be evaluated in terms of technical, economical, social, environmental, political and demographic feasibility Contribution of each group member to be assessed The project component to have three reviews with the weightage of 20:30:50 									
Mode of Evaluation: (No FAT) Continuous Assessment the project done – Mark weightage of 20:30:50 – project report to be submitted, presentation and project reviews									
Recommended by Board of Studies				28-02-2016					
Approved by Academic Council				No.37		Date		16-06-2015	

CSE4098	COMPREHENSIVE EXAMINATION				L	T	P	J	C
					0	0	0	0	2
Pre-requisite					Syllabus version				
					1.00				
Student Learning Outcomes (SLO): 2									
[2] Having a clear understanding of the subject related concepts and of contemporary issues									
Digital Logic and Microprocessor									
Simplification of Boolean functions using K-Map – Combinational logic: Adder, subtractor, encoder, decoder, multiplexer, de-multiplexer – Sequential Logic: Flip flops- 8086 Microprocessor: instructions – peripherals: 8255, 8254, 8257.									
Computer Architecture and Organization									
Instructions - Instruction types- Instruction Formats - Addressing Modes- Pipelining- Data Representation - Memory Hierarchy- Cache memory-Virtual Memory- I/O Fundamentals- I/O Techniques - Direct Memory Access - Interrupts-RAID architecture									
Programming, Data Structures and Algorithms									
Programming in C; Algorithm Analysis – Iterative and Recursive Algorithms; ADT - Stack and its Applications - Queue and its Applications; Data Structures – Arrays and Linked Lists; Algorithms - Sorting – Searching; Trees – BST, AVL; Graphs – BFS , DFS , Dijkstra’s Shortest Path Algorithm.									
Theory of Computation									
Deterministic Finite Automata, Non deterministic Finite Automata, Regular Expressions, Context Free Grammar, Push down Automata and Context Free Languages, Turing Machines.									
Web Technologies									
Web Architecture- JavaScript – objects String, date, Array, Regular Expressions, DHTML-HTML DOM Events; Web Server – HTTP- Request/Response model-RESTful methods- State Management – Cookies , Sessions – AJAX.									
Operating Systems									
Processes, Threads, Inter-process communication, CPU scheduling, Concurrency and synchronization, Deadlocks, Memory management and Virtual memory & File systems.									
Database Management System									
DBMS, Schema, catalog, metadata, data independence, pre-compiler; Users-naïve, sophisticated, casual ;ER Model- Entity, attributes, structural constraints; Relational Model-Constraints, Relational Algebra operations; SQL- DDL, DML, TCL, DCL commands, basic queries and Top N queries; Normalization-properties, 1NF, 2NF, 3NF, BCNF; Indexing-different types, Hash Vs B-tree Index; Transaction-problems, Concurrency Control-techniques, Recovery-methods.									
Data Communication and Computer Networks									
Circuit Switching, Packet Switching, Frame Relay, Cell Switching, ATM , OSI Reference model, TCP\IP, Network topologies, LAN Technologies, Error detection and correction techniques, Internet protocols , IPv4/IPv6, Routing algorithms, TCP and UDP, Sockets, Congestion control, Application Layer Protocols, Network Security: Basics of public and private key cryptosystems-Digital Signatures and Hash codes, Transport layer security, VPN, Firewalls.

CSE4099	CAPSTONE PROJECT				L	T	P	J	C
		0	0	0	0	0	0	0	20
Pre-requisite	As per the academic regulations				Syllabus version				
									v. 1.0
Course Objectives:									
To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field.									
Expected Course Outcome:									
At the end of the course the student will be able to									
<ol style="list-style-type: none"> 1. Formulate specific problem statements for ill-defined real life problems with reasonable assumptions and constraints. 2. Perform literature search and / or patent search in the area of interest. 3. Conduct experiments / Design and Analysis / solution iterations and document the results. 4. Perform error analysis / benchmarking / costing 5. Synthesise the results and arrive at scientific conclusions / products / solution 6. Document the results in the form of technical report / presentation 									
Student Learning Outcomes (SLO): 5, 6, 20									
Contents									
<ol style="list-style-type: none"> 1. Capstone Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities. 2. Project can be for one or two semesters based on the completion of required number of credits as per the academic regulations. 3. Can be individual work or a group project, with a maximum of 3 students. 4. In case of group projects, the individual project report of each student should specify the individual's contribution to the group project. 5. Carried out inside or outside the university, in any relevant industry or research institution. 6. Publications in the peer reviewed journals / International Conferences will be an added advantage 									
Mode of Evaluation: Periodic reviews, Presentation, Final oral viva, Poster submission

ENG1011	ENGLISH FOR ENGINEERS				L	T	P	J	C
					0	0	4	0	2
Pre-requisite	Cleared EPT / Effective English				Syllabus version				
					v. 2.2				
Course Objectives:									
1. To facilitate effective language skills for academic purposes and real-life situations. 2. To enhance students' language and communication with focus on placement skills development. 3. To aid students apply language and communication skills in professional reading and reporting.									
Expected Course Outcome:									
1. Apply language skills with ease in academic and real-life situations. 2. Build up a job winning digital foot print and learn to face interviews confidently. 3. Develop good interpreting and reporting skills to aid them in research. 4. Comprehend language and communication skills in academic and social contexts. 5. Acquire vocabulary and learn strategies for error-free communication.									
Student Learning Outcomes (SLO): 3,6,18									
3. Having an ability to be socially intelligent with good SIQ (Social Intelligence Quotient) and EQ (Emotional Quotient) 16. Having a good working knowledge of communicating in English 18. Having critical thinking and innovative skills									
Module:1	Listening								4 hours
Casual and Academic									
Module:2	Speaking								4 hours
Socializing Skills - Introducing Oneself- His / Her Goals & SWOT									
Module:3	Reading								2 hours
Skimming and Scanning									
Module:4	Writing								2 hours
Error-free sentences, Paragraphs									
Module:5	Listening								4 hours
News (Authentic Material): Analyzing General and Domain Specific Information									
Module:6	Speaking								4 hours
Group Discussion on factual, controversial and abstract issues									
Module:7	Reading:								2 hours
Extensive Reading									
Module:8	Writing								2 hour
Email Etiquette with focus on Content and Audience									
Module:9	Listening								4 hours
Speeches : General and Domain Specific Information									
Module:10	Speaking								4 hours
Developing Persuasive Skills - Turncoat and Debate									
Module:11	Reading								2 hours

Intensive Reading		
Module:12	Writing	2 hours
Data Transcoding		
Module:13	Cross Cultural Communication	4 hours
Understanding Inter and Cross-Cultural Communication Nuances		
Module:14	Speaking	4 hours
Public Speaking/Extempore /Monologues		
Module:15	Reading for research	2 hours
Reading Scientific/Technical Articles		
Module:16	Writing	2 hours
Creating a Digital/Online Profile – LinkedIn (Résumé/Video Profile)		
Module:17	Speaking:	4 hours
Mock Job/Placement Interviews		
Module:18	Writing	2 hours
Report Writing		
Module:19	Speaking	4 hours
Presentation using Digital Tools		
Module:20	Vocabulary	2 hours
Crossword Puzzles/Word games		
	Total Lecture hours:	60 hours

Mode of Evaluation: Assignment and FAT- Mini Project, Flipped Class Room, Lecture, PPT's, Role play, Assignments Class/Virtual Presentations, Report and beyond the classroom activities

List of Challenging Experiments (Indicative)		CO: 1,2,3,4,5
1.	Create a Digital or Online Profile or a Digital Footprint	6 hours
2.	Prepare a video resume	8 hours
3.	Analyse a documentary critically	4 hours
4.	Turn Coat- Speaking for and against the topic / Activities through VIT Community Radio	6 hours
5.	Present a topic using 'Prezi'	6 hours
6.	Analyse a case on cross cultural communication critically	6 hours
7.	Create a list of words relating to your domain	4 hours
8.	Listen to a conversation of native speakers of English and answer the following questions	6 hours
9.	Read an article and critically analyse the text in about 150 words	6 hours
10.	Read an autobiography and role play the character in class by taking an excerpt from the book	8 hours

Total Practical Hours			60 hours
Mode of evaluation: Mini Project, Flipped Class Room, Lecture, PPT's, Role play, Assignments Class/Virtual Presentations, Report and beyond the classroom activities			
Recommended by Board of Studies	22-07-2017		
Approved by Academic Council	No. 47	Date	24.08.2017

HUM1021	ETHICS AND VALUES				L	T	P	J	C
					2	0	0	0	2
Pre-requisite	Nil				Syllabus version				
					1.1				
Course Objectives:									
1. To understand and appreciate the ethical issues faced by an individual in profession, society and polity									
2. To understand the negative health impacts of certain unhealthy behaviors									
3. To appreciate the need and importance of physical, emotional health and social health									
Expected Course Outcome:									
Students will be able to:									
1. Follow sound morals and ethical values scrupulously to prove as good citizens									
2. Understand various social problems and learn to act ethically									
3. Understand the concept of addiction and how it will affect the physical and mental health									
4. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects									
5. Identify the main typologies, characteristics, activities, actors and forms of cybercrime									
Student Learning Outcomes (SLO): 2,10,11,12									
2. Having a clear understanding of the subject related concepts and of contemporary issues									
10. Having a clear understanding of professional and ethical responsibility									
11. Having interest in lifelong learning									
12. Having adaptive thinking and adaptability									
Module:1	Being Good and Responsible				5 hours				
Gandhian values such as truth and non-violence – Comparative analysis on leaders of past and present – Society’s interests versus self-interests - Personal Social Responsibility: Helping the needy, charity and serving the society									
Module:2	Social Issues 1				4 hours				
Harassment – Types - Prevention of harassment, Violence and Terrorism									
Module:3	Social Issues 2				4 hours				
Corruption: Ethical values, causes, impact, laws, prevention – Electoral malpractices; White collar crimes - Tax evasions – Unfair trade practices									
Module:4	Addiction and Health				5 hours				
Peer pressure - Alcoholism: Ethical values, causes, impact, laws, prevention – Ill effects of smoking - Prevention of Suicides;									
Sexual Health: Prevention and impact of pre-marital pregnancy and Sexually Transmitted Diseases									
Module:5	Drug Abuse				3 hours				
Abuse of different types of legal and illegal drugs: Ethical values, causes, impact, laws and prevention									
Module:6	Personal and Professional Ethics				4 hours				
Dishonesty - Stealing - Malpractices in Examinations – Plagiarism									
Module:7	Abuse of Technologies				3 hours				
Hacking and other cyber crimes, Addiction to mobile phone usage, Video games and Social									

networking websites			
Module:8	Contemporary issues:	2 hours	
Guest lectures by Experts			
		Total Lecture hours:	30 hours

MAT1011	CALCULUS FOR ENGINEERS	L	T	P	J	C
		3	0	2	0	4
Pre-requisite	10+2 Mathematics or MAT1001	Syllabus Version				
		1.0				
Course Objectives :						
<ol style="list-style-type: none"> To provide the requisite and relevant background necessary to understand the other important engineering mathematics courses offered for Engineers and Scientists. To introduce important topics of applied mathematics, namely Single and Multivariable Calculus and Vector Calculus etc. To impart the knowledge of Laplace transform, an important transform technique for Engineers which requires knowledge of integration 						
Expected Course Outcome:						
At the end of this course the students should be able to						
<ol style="list-style-type: none"> Apply single variable differentiation and integration to solve applied problems in engineering and find the maxima and minima of functions Understand basic concepts of Laplace Transforms and solve problems with periodic functions, step functions, impulse functions and convolution Evaluate partial derivatives, limits, total differentials, Jacobians, Taylor series and optimization problems involving several variables with or without constraints Evaluate multiple integrals in Cartesian, Polar, Cylindrical and Spherical coordinates. Understand gradient, directional derivatives, divergence, curl and Greens', Stokes, Gauss theorems Demonstrate MATLAB code for challenging problems in engineering 						
Student Learning Outcome (SLO):		1, 2, 9				
<ol style="list-style-type: none"> Having an ability to apply mathematics and science in engineering applications Having a clear understanding of the subject related concepts and of contemporary issues Having problem solving ability- solving social issues and engineering problems 						
Module: 1	Application of Single Variable Calculus					9 hours
Differentiation-Extrema on an Interval-Rolle's Theorem and the Mean Value Theorem-Increasing and Decreasing functions and First derivative test-Second derivative test-Maxima and Minima-Concavity. Integration-Averagefunction value - Area between curves - Volumes of solids of revolution - Beta and Gamma functions-interrelation						
Module: 2	Laplace transforms					7 hours
Definition of Laplace transform-Properties-Laplace transform of periodic functions-Laplace transform of unit step function, Impulse function-Inverse Laplace transform-Convolution.						
Module: 3	Multivariable Calculus					4 hours
Functions of two variables-limits and continuity-partial derivatives –total differential-Jacobian and its properties.						
Module: 4	Application of Multivariable Calculus					5 hours
Taylor's expansion for two variables–maxima and minima–constrained maxima and minima-Lagrange's multiplier method.						
Module: 5	Multiple integrals					8 hours
Evaluation of double integrals–change of order of integration–change of variables between Cartesian and polar co-ordinates - Evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical co-ordinates- evaluation of multiple integrals using gamma and beta functions.						
Module: 6	Vector Differentiation					5 hours
Scalar and vector valued functions – gradient, tangent plane–directional derivative-divergence and curl–scalar and vector potentials–Statement of vector identities-Simple problems						
Module: 7	Vector Integration					5 hours
line, surface and volume integrals - Statement of Green's, Stoke's and Gauss divergence theorems -verification and evaluation of vector integrals using them.						

Module: 8	Contemporary Issues:	2 hours
Industry Expert Lecture		
Total Lecture hours		45 hours
Text Book(s)		
1. Thomas' Calculus, George B. Thomas, D. Weir and J. Hass, 13 th edition, Pearson, 2014. 2. Advanced Engineering Mathematics, Erwin Kreyszig, 10 th Edition, Wiley India, 2015.		
Reference Books		
1. Higher Engineering Mathematics, B.S. Grewal, 43 rd Edition, Khanna Publishers, 2015 2. Higher Engineering Mathematics, John Bird, 6 th Edition, Elsevier Limited, 2017. 3. Calculus: Early Transcendentals, James Stewart, 8 th edition, Cengage Learning, 2017. 4. Engineering Mathematics, K.A. Stroud and Dexter J. Booth, 7 th Edition, Palgrave Macmillan (2013)		
Mode of Evaluation: Digital Assignments, Quiz, Continuous Assessments, Final Assessment Test		
List of Challenging Experiments (Indicative)		
1.	Introduction to MATLAB through matrices, and general Syntax	2 hours
2.	Plotting and visualizing curves and surfaces in MATLAB – Symbolic computations using MATLAB	2 hours
3.	Evaluating Extremum of a single variable function	2 hours
4.	Understanding integration as Area under the curve	2 hours
5.	Evaluation of Volume by Integrals (Solids of Revolution)	2 hours
6.	Evaluating maxima and minima of functions of several variables	2 hours
7.	Applying Lagrange multiplier optimization method	2 hours
8.	Evaluating Volume under surfaces	2 hours
9.	Evaluating triple integrals	2 hours
10.	Evaluating gradient, curl and divergence	2 hours
11.	Evaluating line integrals in vectors	2 hours
12.	Applying Green's theorem to real world problems	2 hours
Total Laboratory Hours		24 hours
Mode of Assessment: Weekly Assessment, Final Assessment Test

MAT2001	STATISTICS FOR ENGINEERS	L	T	P	J	C
		3	0	2	0	4
Prerequisites	MAT1011 – Calculus for Engineers	Syllabus Version:				
		1.0				
Course Objectives :						
<ol style="list-style-type: none"> To provide students with a framework that will help them choose the appropriate descriptive methods in various data analysis situations. To analyse distributions and relationship of real-time data. To apply estimation and testing methods to make inference and modelling techniques for decision making. 						
Expected Course Outcome:						
At the end of the course the student should be able to:						
<ol style="list-style-type: none"> Compute and interpret descriptive statistics using numerical and graphical techniques. Understand the basic concepts of random variables and find an appropriate distribution for analysing data specific to an experiment. Apply statistical methods like correlation, regression analysis in analysing, interpreting experimental data. Make appropriate decisions using statistical inference that is the central to experimental research. Use statistical methodology and tools in reliability engineering problems. Demonstrate R programming for statistical data 						
Student Learning Outcome (SLO): 1, 2, 7, 9, 14						
<ol style="list-style-type: none"> Having an ability to apply mathematics and science in engineering applications. Having a clear understanding of the subject related concepts and of contemporary issues. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning). Having problem solving ability- solving social issues and engineering problems. Having an ability to design and conduct experiments, as well as to analyse and interpret data. 						
Module: 1	Introduction to Statistics					6 hours
Introduction to statistics and data analysis-Measures of central tendency–Measures of variability-[Moments-Skewness-Kurtosis (Concepts only)].						
Module: 2	Random variables					8 hours
Introduction–random variables–Probability mass Function, distribution and density functions–joint Probability distribution and joint density functions–Marginal, conditional distribution and density functions–Mathematical expectation, and its properties Covariance, moment generating function–characteristic function.						
Module: 3	Correlation and regression					4 hours
Correlation and Regression – Rank Correlation– Partial and Multiple correlation– Multiple regression.						
Module: 4	Probability Distributions					7 hours
Binomial and Poisson distributions – Normal distribution – Gamma distribution – Exponential distribution – Weibull distribution.						
Module: 5	Hypothesis Testing I					4 hours
Testing of hypothesis – Introduction–Types of errors, critical region, procedure of testing hypothesis-Large sample tests– Z test for Single Proportion, Difference of Proportion, mean and difference of means.						
Module: 6	Hypothesis Testing II					9 hours
Small sample tests- Student’s t-test, F-test- chi-square test- goodness of fit - independence of attributes- Design of Experiments - Analysis of variance – one and two way classifications - CRD-RBD-LSD.						
Module: 7	Reliability					5 hours
Basic concepts-Hazard function-Reliabilities of series and parallel systems-System Reliability-Maintainability-Preventive and repair maintenance-Availability.						
Module: 8	Contemporary Issues					2 hours
Industry Expert Lecture						
Total Lecture hours						45 hours

Text book(s)		
<ol style="list-style-type: none"> 1. Probability and Statistics for engineers and scientists, R.E.Walpole, R.H.Myers,S.L.Mayers and K.Ye, 9th Edition, Pearson Education (2012). 2. Applied Statistics and Probability for Engineers, Douglas C. Montgomery, George C. Runger, 6th Edition, John Wiley & Sons (2016). 		
Reference books

Probability and Statistics, J.L.Devore, 8th Edition, Brooks/Cole, Cengage Learning (2012). 3. Probability and Statistics for Engineers, R.A.Johnson, Miller Freund's, 8th edition, Prentice Hall India (2011). 4. Probability, Statistics and Reliability for Engineers and Scientists, Bilal M. Ayyub and Richard H. McCuen, 3rdedition, CRC press (2011). 		
Mode of Evaluation: Digital Assignments, Continuous Assessment Tests, Quiz, Final Assessment Test.		
List of Experiments (Indicative)		
1.	Introduction: Understanding Data types; importing / exporting data.	2 hours
2.	Computing Summary Statistics /plotting and visualizing data using Tabulation and Graphical Representations.	2 hours
3.	Applying correlation and simple linear regression model to real dataset; computing and interpreting the coefficient of determination.	2 hours
4.	Applying multiple linear regression model to real dataset; computing and interpreting the multiple coefficient of determination.	2 hours
5.	Fitting the following probability distributions: Binomial distribution	2 hours
6.	Normal distribution, Poisson distribution	2 hours
7.	Testing of hypothesis for One sample mean and proportion from real-time problems.	2 hours
8.	Testing of hypothesis for Two sample means and proportion from real-time problems	2 hours
9.	Applying the t test for independent and dependent samples	2 hours
10.	Applying Chi-square test for goodness of fit test and Contingency test to real dataset	2 hours
11.	Performing ANOVA for real dataset for Completely randomized design, Randomized Block design, Latin square Design	2 hours
Total laboratory hours		22 hours
Mode of Evaluation: Weekly Assessment, Final Assessment Test

Approved by Academic Council	47 th ACM	Date 05.10.2017

MGT1022	LEAN START-UP MANAGEMENT	L	T	P	J	C
		1	0	0	4	2
Pre-requisite	Nil	Syllabus version				
		1.0				
Course Objectives:						
To develop the ability to <ul style="list-style-type: none"> 4. Learn methods of company formation and management. 5. Gain practical skills in and experience of stating of business using pre-set collection of business ideas. 6. Learn basics of entrepreneurial skills. 						
Expected Course Outcome:						
On completion of this course the students will be able to: <ul style="list-style-type: none"> 1. Understand developing business models and growth drivers 2. Use the business model canvas to map out key components of enterprise 3. Analyze market size, cost structure, revenue streams, and value chain 4. Understand build-measure-learn principles 5. Foreseeing and quantifying business and financial risks 						
Student Learning Outcomes (SLO): 2, 4, 18, 19						
2. Having a clear understanding of the subject related concepts and of contemporary issues						
4. Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking skills which cannot be codified)						
18. Having critical thinking and innovative skills						
19. Having a good cognitive load management skills						
Module: 1						2hours
Creativity and Design Thinking (identify the vertical for business opportunity, understand your customers, accurately assess market opportunity)						
Module: 2						3 hours
Minimum Viable Product (Value Proposition, Customer Segments, Build-measure-learn process)						
Module: 3						3hours
Business Model Development (Channels and Partners, Revenue Model and streams, Key Resources, Activities and Costs, Customer Relationships and Customer Development Processes, Business model canvas–the lean model-templates)						
Module: 4						3 hours
Business Plan and Access to Funding (visioning your venture, taking the product / service to market, Market plan including Digital & Viral Marketing, start-up finance – Costs / Profits & Losses / cash flow, Angel / VC / Bank Loans and Key elements of raising money)						
Module: 5						2hours
Legal, Regulatory, CSR, Standards, Taxes						
Module: 6						2 hours
Lectures by Entrepreneurs

PHY1701	ENGINEERING PHYSICS	L	T	P	J	C
		3	0	2	0	4
Pre-requisite	Physics of 12 th standard or equivalent	Syllabus version				
		2.1				
Course Objectives:						
To enable the students to understand the basics of the latest advancements in Physics viz., Quantum Mechanics, Nanotechnology, Lasers, Electro Magnetic Theory and Fiber Optics.						
Expected Course Outcome:						
On completion of this course the students will be able to:						
<ol style="list-style-type: none"> To understand the dual nature of radiation and matter. To apply Schrodinger's equations to solve finite and infinite potential problems. To apply quantum ideas at the nanoscale. To apply quantum ideas for understanding the operation and working principle of optoelectronic devices. To analyze the Maxwell's equations in differential and integral form. To classify the optical fiber for different Engineering applications. To apply concept of Lorentz Transformation for engineering applications. To demonstrate the quantum mechanical ideas – Lab 						
Student Learning Outcomes (SLO):		2, 4, 5, 9				
2. Having a clear understanding of the subject related concepts and of contemporary issues						
4. Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking skills which cannot be codified)						
5. Having design thinking capability						
9. Having problem solving ability- solving social issues and engineering problems						
Module: 1	Introduction to Modern Physics					6 hours
Planck's concept (hypothesis), Compton Effect, Particle properties of wave: Matter Waves, Davisson Germer Experiment, Heisenberg Uncertainty Principle, Wave function, and Schrodinger equation (time dependent & independent).						
Module: 2	Applications of Quantum Physics					5 hours
Particle in a 1-D box (Eigen Value and Eigen Function), 3-D Analysis (Qualitative), Tunneling Effect (Qualitative) (AB 205), Scanning Tunneling Microscope (STM).						
Module: 3	Nanophysics					5 hours
Introduction to Nano-materials, Moore's law, Properties of Nano-materials, Quantum confinement, Quantum well, wire & dot, Carbon Nano-tubes (CNT), Applications of nanotechnology in industry.						
Module: 4	Laser Principles and Engineering Application					6 hours
Laser Characteristics, Spatial and Temporal Coherence, Einstein Coefficient & its significance, Population inversion, Two, three & four level systems, Pumping schemes, Threshold gain coefficient, Components of laser, Nd-YAG, He-Ne, CO ₂ and Dye laser and their engineering applications.						
Module: 5	Electromagnetic Theory and its application					6 hours
Physics of Divergence, Gradient and Curl, Qualitative understanding of surface and volume integral, Maxwell Equations (Qualitative), Wave Equation (Derivation), EM Waves, Phase velocity, Group velocity, Group index, Wave guide (Qualitative)						
Module: 6	Propagation of EM waves in Optical fibers and Optoelectronic Devices					6 hours
Light propagation through fibers, Acceptance angle, Numerical Aperture, Types of fibers - step index, graded index, single mode & multimode, Attenuation, Dispersion-intermodal and intramodal. Sources-LED & Laser Diode, Detectors-Photodetectors- PN & PIN - Applications of fiber optics in						

communication- Endoscopy.		
Module: 7	Special Theory of Relativity	9 hours
Frame of reference, Galilean relativity, Postulate of special theory of relativity, Simultaneity, length contraction and time dilation.		
Module: 8	Contemporary issues	2 hours
Lecture by Industry Experts		
Total Lecture hours		45 hours

List of Challenging Experiments (Indicative)		
1.	Determination of Planck's constant using electroluminescence process	2 hrs
2.	Electron diffraction	2 hrs
3.	Determination of wave length of laser source (He-Ne laser and diodelasers of Different wave lengths) using diffraction technique	2 hrs
4.	Determination of size of fine particle using laser diffraction	2 hrs
5.	Determination of the track width (periodicity) in a written CD	2 hrs
6.	Optical Fiber communication (source+optical fiber+detector)	2 hrs
7.	Analysis of crystallite size and strain in a nano-crystalline film using X-ray diffraction	2 hrs
8.	Numerical solutions of Schrödinger equation (e.g. particle in a box problem) (can be given as an assignment)	2 hrs
9.	Laser coherence length measurement	2 hrs
10.	Proof for transverse nature of E.M. waves	2 hrs
11.	Quantum confinement and Heisenberg's uncertainty principle	2 hrs
12.	Determination of angle of prism and refractive index for various colour – Spectrometer	2 hrs
13.	Determination of divergence of a laser beam	2 hrs
14.	Determination of crystalline size for nanomaterial (Computer simulation)	2 hrs
15.	Demonstration of phase velocity and group velocity (Computer simulation)	2 hrs

PHY1999	INTRODUCTION TO INNOVATIVE PROJECTS	L	T	P	J	C
		1	0	0	4	2
Pre-requisite	Nil	Syllabus version				
		1.0				
Course Objectives:						
This course is offered to the students in the 1 st Year of B. Tech. in order to orient them towards independent, systemic thinking and be innovative.						
<ol style="list-style-type: none"> 1. To make students confident enough to handle the day to day issues. 2. To develop the “Thinking Skill” of the students, especially Creative Thinking Skills 3. To train the students to be innovative in all their activities 4. To prepare a project report on a socially relevant theme as a solution to the existing issues 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. To understand the various types of thinking skills. 2. To enhance the innovative and creative ideas. 3. To find out a suitable solution for socially relevant issues-J component 						
Student Learning Outcomes (SLO): 2, 3, 9, 17, 18						
<ol style="list-style-type: none"> 2. Having a clear understanding of the subject related concepts and of contemporary issues 3. Having an ability to be socially intelligent with good SIQ (Social Intelligence Quotient) and EQ (Emotional Quotient) 9. Having problem solving ability- solving social issues and engineering problems 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice 18. Having critical thinking and innovative skills 						
Module: 1A	Self Confidence					1 hour
Understanding self – Johari Window – SWOT Analysis – Self Esteem – Being a contributor – Case Study						
Project : Exploring self, understanding surrounding, thinking about how s(he) can be a contributor for the society, Creating a big picture of being an innovator–writing a 1000 words imaginary Autobiography of self–Topic “Mr. X–the great innovator of 2015” and upload. (non-contact hours)						
Module: 1B	Thinking Skill					1 hour
Thinking and Behaviour–Types of thinking–Concrete– Abstract, Convergent, Divergent, Creative, Analytical, Sequential and Holistic thinking–Chunking Triangle–Context Grid – Examples – Case Study.						
Project: Meeting atleast 50 people belonging to various strata of life and talk to them / make field visits to identify a min. of 100 society related issues, problems for which they need solutions and categories them and upload along with details of people met and lessons learnt. (4 non-contact hours)						
Module: 1C	Lateral Thinking Skill					1 hour
Blooms Taxonomy–HOTS–Out of the box thinking–de Bono lateral thinking model–Examples						
Project : Last weeks-incomplete portion to be done and uploaded						
Module: 2A	Creativity					1 hour
Creativity Models–Walla–Barrons–Koberg & Begnall–Examples						
Project: Selecting 5 out of 100 issues identified for future work. Criteria based approach for prioritisation, use of statistical tools & upload. (4 non-contact hours)						
Module: 2B	Brain storming					1 hour
25 brainstorming techniques and examples						
Project: Brainstorm and come out with as many solutions as possible for the top 5 issues identified & upload. (4 non-contact hours)						
Module: 3	Mind Mapping					1 hour
Mind Mapping techniques and guidelines. Drawing a mind map						
Project: Using Mind Maps get another set of solutions for the next 5 issues (issue 6–10).						

		(4 non-contact hours)
Module: 4A	Systems thinking	1 hour
Systems Thinking essentials–examples–Counter Intuitive condemnns Project: Select 1 issue / problem for which the possible solutions are available with you. Apply Systems Thinking process and pick up one solution [explanation should be given why the other possible solutions have been left out].Goback to the customer and assess the acceptability and upload.		
		(4 non-contact hours)
Module: 4B	Design Thinking	1 hour

Classification of verbs Be verb desu Present and Present negative Basic structure of sentence (Subject+ Object+ Verb) Katakana-reading and writing							
Module:4	Conjunction and Adjectives					4 hours	
Conjunction-Ya.....nado Classification of Adjectives 'I' and 'na'-ending Set phrase – Onegaishimasu – Sumimasen, wakarimasen Particle –Wa, Particle-Ni 'Ga imasu' and 'Ga arimasu' for Existence of living things and non-living things							
Particle- Ka, Ni, Ga							
Module:5	Vocabulary and its Meaning					4 hours	
Days/ Months /Year/Week (Current, Previous, Next, Next to Next) ; Nation, People and Language Relationship of							

family (look and learn); Simple kanji recognition			
Module 6	Forming questions and giving answers	4 hours	
Classification of Question words (Dare, Nani, Itsu, Doyatte, dooshite, Ikutsu, Ikura); Classification of Te forms, Polite form of verbs			
Module: 7	Expressing time, position and directions	4 hours	
Classification of question words (Doko, Dore, Dono, Dochira); Time expressions (Jikan), Number of hours, Number of months, calendar of a month; Visit the departmental store, railway stations, Hospital (Byoki), office and University			
Module:8	Guest Lecture by Experts	2 hours	
Total Lecture hours:		30 hours	
Text Book(s):			
1.	The Japan Foundation (2017), Marugoto Japanese Language and Culture Starter A1 Coursebook For Communicative Language Competences, New Delhi: Goyal Publishers (9788183078047)		
2.	Banno, Eri et al (2011), Genki: An Integrated Course in Elementary Japanese I [Second Edition], Japan: The Japan Times.

1.	Japanese for Busy people (2011) video CD, AJALT, Japan.		
2.	Carol and Nobuo Akiyama (2010), The Fast and Fun Way, New Delhi: Barron's Publication		
Mode of Evaluation: CAT , Quiz and Digital Assignments			
Recommended by Board of Studies		24.10.2018	
Approved by Academic Council		No. 53	Date 13.12.2018

STS 1101	FUNDAMENTALS OF APTITUDE				L	T	P	J	C
					3	0	0	0	1
Pre-requisite	None				Syllabus version				
					1				
Course Objectives:									
<ol style="list-style-type: none"> To enhance the logical reasoning skills of the students and improve the problem-solving abilities To strengthen the ability to solve quantitative aptitude problems To enrich the verbal ability of the students 									
Expected Course Outcome:									
<ol style="list-style-type: none"> Students will be introduced to basic concepts of Quantitative Aptitude, Logical reasoning and Verbal ability Students will be able to read and demonstrate good comprehension of text in areas of the student's interest Students will be able to demonstrate the ability to resolve problems that occur in their field. 									
Student Learning Outcomes (SLO):	5, 9, 10, 12 and 16								
<ol style="list-style-type: none"> Having design thinking capability Having problem solving ability- solving social issues and engineering problems Having a clear understanding of professional and ethical responsibility Having adaptive thinking and adaptability Having a good working knowledge of communicating in English 									
Module:1	Lessons on excellence				2hours				
Skill introspection, Skill acquisition, consistent practice									
Module:2	Logical Reasoning				16 hours				
Thinking Skill									
<ul style="list-style-type: none"> Problem Solving Critical Thinking Lateral Thinking 									
Taught through thought-provoking word and rebus puzzles, and word-link builder questions									
Coding & decoding, Series, Analogy, Odd man out and Visual reasoning									
<ul style="list-style-type: none"> Coding and Decoding Series Analogy Odd Man Out Visual Reasoning 									
Sudoku puzzles									
Solving introductory to moderate level sudoku puzzles to boost logical thinking and comfort with numbers									
Attention to detail									
Picture and word driven Qs to develop attention to detail as a skill									

Module:3	Quantitative Aptitude	14 hours
Speed Maths <ul style="list-style-type: none"> • Addition and Subtraction of bigger numbers • Square and square roots • Cubes and cube roots • Vedic maths techniques • Multiplication Shortcuts • Multiplication of 3 and higher digit numbers • Simplifications • Comparing fractions • Shortcuts to find HCF and LCM • Divisibility tests shortcuts 		
Algebra and functions		
Module:4	Recruitment Essentials	5hours
Looking at an engineering career through the prism of an effective resume <ul style="list-style-type: none"> • Importance of a resume - the footprint of a person's career achievements • How a resume looks like? • An effective resume vs. a poor resume: what skills you must build starting today and how? 		
Impression Management Getting it right for the interview: <ul style="list-style-type: none"> • Grooming, dressing • Body Language and other non-verbal signs • Displaying the right behaviour 		
Module:5	Verbal Ability	8hours
Essential grammar for placements: <ul style="list-style-type: none"> • Nouns and Pronouns • Verbs • Subject-Verb Agreement • Pronoun-Antecedent Agreement • Punctuations 		
Verbal Reasoning		
	Total Lecture hours:	45 hours
Mode of Evaluation: FAT, Assignments, 3 Assessments with Term End FAT (Computer Based Test)		
Text Book(s): <ol style="list-style-type: none"> 1. FACE, Aptipedia Aptitude Encyclopedia, 2016, 1stEdition, Wiley Publications, Delhi. 2. - Square and square roots
- Cubes and cube roots
- Vedic maths techniques
- Multiplication Shortcuts
- Multiplication of 3 and higher digit numbers
- Simplifications
- Comparing fractions
- Shortcuts to find HCF and LCM
- Divisibility tests shortcuts

Algebra and functions

Module:4	Recruitment Essentials	5hours
-----------------	-------------------------------	---------------

Looking at an engineering career through the prism of an effective resume

- Importance of a resume - the footprint of a person's career achievements
- How a resume looks like?
- An effective resume vs. a poor resume: what skills you must build starting today and how?

Impression Management

Getting it right for the interview:

- Grooming, dressing
- Body Language and other non-verbal signs
- Displaying the right behaviour

Module:5	Verbal Ability	6hours
-----------------	-----------------------	---------------

Grammar challenge

A practice paper with sentence based and passage-based questions on grammar discussed. Topics covered in questions are Nouns and Pronouns, Verbs, Subject-Verb Agreement, Pronoun-Antecedent Agreement, Punctuations

Verbal reasoning

	Total Lecture hours:	45 hours
--	-----------------------------	-----------------

Mode of Evaluation: FAT, Assignments, 3 Assessments with Term End FAT (Computer Based Test)

		3	0	0	0	1
Pre-requisite	None	Syllabus version				
		1				
Course Objectives:						
<ol style="list-style-type: none"> 1. Ability to translate vast data into abstract concepts and to understand JAVA concepts 2. To have a clear understanding of subject related concepts 3. To develop computational ability in Java programming language 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Clear Knowledge about problem solving skills in JAVA concepts 2. Students will be able to write codes in Java 						
Student Learning Outcomes (SLO):	& 18					
7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning)						
18. Having critical thinking and innovative skills						
Module:1	Object and Class, Data types	8 hours				
Types of programming Disadvantages of functional programming Class & Objects Attributes Methods Objects Solving MCQs based on Objects and Classes Solving tricky questions based on encapsulation Solving frequently asked object-based questions Data types Data Why data type Variables Available data types Numeric – int, float, double Character – char, string Solving MCQs based on type casting, data types Solving debugging based MCQs						
Module:2	Basic I / O, Decision Making, Loop Control	8 hours				
Printing Getting input from user during run time Command line arguments Solving programming questions based on CLA Solving MCQs questions based on CLA Need for control statement if..else if..else if..else Nested if..else Switch case Common mistakes with control statements (like using = instead of ==)						

Solving frequently asked questions on decision making		
Types of looping statements Entry Controlled For While Exit Controlled do while break and continue Demo on looping Common mistakes with looping statements (like using; at the end of the loop) Solving pattern programming problems, series problems Solving predict the output questions		
Module:3	String, Date, Array	10 hours
String handling, date handling Solving problems based on arrays like searching, sorting, rearranging, iteration) Multi-dimensional arrays Solving pattern problems using 2D arrays Real time application based on 2D arrays		
Module:4	Inheritance, Aggregation & Associations	12 hours
Need Is A – Inheritance Types of inheritance supported Diagrammatic representation Demo on inheritance Has A – Aggregation Diagrammatic representation Demo on aggregation Uses A - Association Diagrammatic representation Demo on association Assignment on relationships Solving MCQs based on relationships between classes		
Module:5	Modifiers, Interface & Abstract classes (Java specific), Packages	7 hours
Types of access specifiers Demo on access specifiers Assignment on access modifiers Instance Members Solving MCQs based on modifiers Abstract Classes Need Abstract Classes Abstract Methods Interfaces Assignment on abstract classes and interface Need for packages Access specifiers & packages Import classes from other packages		
Total Lecture hours:		45 hours

Reference Books	
1.	Java The Complete Reference, 2014, 9th Edition by By Herbert Schildt, McGraw-Hill Education Pvt Ltd
2.	Introduction to Programming with Java: A Problem-Solving Approach by John Dean
Mode of Evaluation: FAT, Assignments, 3 Assessments with Term End FAT (Computer Based Test)	

STS 3104	ENHANCING PROGRAMMING ABILITY	L	T	P	J	C
		3	0	0	0	1
Pre-requisite	None	Syllabus version				
		1				
Course Objectives:						
<ol style="list-style-type: none"> 1. Ability to translate vast data into abstract concepts and to understand JAVA concepts 2. To have a clear understanding of subject related concepts 3. To develop computational ability in Java programming language 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Clear Knowledge about problem solving skills in JAVA concepts 2. Students will be able to write codes in Java 						
Student Learning Outcomes (SLO):	& 18					
Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning)						
3. Having critical thinking and innovative skills						
Module:1	Collections	12 hours				
ArrayList, LinkedList, List Interface, HashSet, Map Interface, HashMap, Set Programming questions based on collections Real world problems based on data structure						
Module:2	Threads, Exceptions, LinkedList, Arrays	6 hours				
Need of threads Creating threads Wait Sleep Thread execution Need for exception handling try, catch, throw, throws Creating own exception (Java, Python) Handling own exceptions Solving programming questions based on linked list and arrays						
Module:3	Stack and Queue, Trees	7 hours				
Solving programming questions based on stacks and queues How to implement a stack using queue? How to implement a queue using stack? Solving programming questions based on trees, binary trees, binary search trees						
Module:4	JDBC Connectivity, JDBC Data	10 hours				
JDBC Overview Database Setup Install the MySQL Database Create New Database User in MySQL Workbench Selecting data from tables Inserting Data into the Database Updating Data in the Database						

Deleting Data from the Database Creating Prepared Statements		
Module:5	Networking with Java	10 hours
Working with URLs Sending HTTP Requests Processing JSON data using Java Processing XML data using Java		
Total Lecture hours:		45 hours
Reference Books

Student Learning Outcomes (SLO):	& 18								
Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning)									
3. Having critical thinking and innovative skills									
Module:1	Date, Array				10 hours				
date handling Solving problems based on arrays like searching, sorting, rearranging, iteration) Multi-dimensional arrays Solving pattern problems using 2D arrays Real time application based on 2D arrays									
Module:2	Inheritance, Aggregation & Associations				15 hours				
Need Is A – Inheritance Types of inheritance supported Diagrammatic representation Demo on inheritance Has A – Aggregation Diagrammatic representation Demo on aggregation Uses A - Association Diagrammatic representation Demo on association Assignment on relationships Solving MCQs based on relationships between classes									
Module:3	Modifiers, Interface & Abstract classes (Java specific)				10 hours				
Types of access specifiers Demo on access specifiers Assignment on access modifiers Instance Members Solving MCQs based on modifiers Abstract Classes Need Abstract Classes									

Abstract Methods		
Interfaces		
Assignment on abstract classes and interface		
Module:4	Packages	5 hours
Need for packages		
Access specifiers & packages		
Import classes from other packages		
Module:5	Exceptions	5 hours
Need for exception handling		
try, catch, throw, throws		
Creating own exception (Java, Python)		
Handling own exceptions		
Total Lecture hours:		
		45 hours

BRIDGE COURSE

ENG1002	EFFECTIVE ENGLISH				L	T	P	J	C
					0	0	4	0	2
Pre-requisite	Not cleared English Proficiency Test (EPT)				Syllabus version				
					v.2.0				
Course Objectives:									
1. To enable students develop basic proficiency in Language Skills									
2. To help students overcome communication barriers									
3. To facilitate students communicate effectively in academic and social contexts									
Expected Course Outcome:									
1. Speak fluently in academic and social contexts									
2. Listen for global and specific comprehension to improve study skills like note taking, summarizing, etc									
3. Read and comprehend technical and general texts									
4. Write grammatically correct creative and descriptive sentences and paragraphs in specific contexts									
5. Enact on social contexts with a message, and communicate clearly and effectively in formal and informal contexts									
Student Learning Outcomes (SLO): 16, 18									
16. Good working knowledge of communicating in English									
18. Critical thinking and innovative skills									
Module:1	Speaking				4hours				
Introduce yourself using Temperament Sorter									
Module:2	Listening				4 hours				
Listen to songs – Gap-fill Exercise									
Module:3	Reading				2 hours				
Loud Reading with focus on pronunciation									
Module:4	Writing				2 hours				
Make sentences using jumbled words									
Module:5	Listening				4 hours				
Listen to Motivational Speeches – Note taking									
Module:6	Speaking				4 hours				
Situational Dialogues									
Module:7	Reading				2hours				
Reading for vocabulary development									
Module:8	Writing				2hours				
Descriptive Writing – Process									
Compare & Contrast – Product description									
Module:9	Listening				4hours				
Minimal Pairs- Difficult Sounds for Indian Speakers									

Module:10	Speaking		4hours
Just a Minute			
Module:11	Reading		2hours
Global Comprehension			
Module:12	Writing		2hours
Travelogue Writing - 25+ FAQs (Wh-questions) on a place they have visited – Pair work			
Module:13	Listening		4hours
Listen to a Documentary/Talk show and summarize			
Module:14	Speaking		4 hours
Discuss facts and opinions using question tags			
Module:15	Speaking:		4hours
Role Play with a Message			
Module:16	Writing		2hours
Formal Letter Writing focusing on Content			
Module:17	Vocabulary		2hours
Correct spelling errors			
Module:18	Speaking		4 hours
Asking for and giving Directions/Instructions			
Module:19	Reading		2hours
Factual Comprehension			
Module:20	Writing		2 hours
Story writing using prompts/pictures			
		Total Practical hours:	60hours
Text Books			
1.	Lewis Lansford and Peter Astley. Oxford English for Careers: Engineering 1: Student's Book. 2013. USA: Oxford University Press.		
2.	Jaimie Scanlon. Q: Skills for Success 1 Listening & Speaking. 2015. [Second Revised Edition]. Oxford: Oxford University Press.		
Reference Books			
1.	Sanjay Kumar and Puspallata. Communication Skills. 2015. [Second Edition] Print. New Delhi: Oxford University Press.		
2.	John Seely. Oxford Guide to Effective Writing and Speaking. 2013. [Third Edition].New Delhi: Oxford University Press.		
3.	Meenakshi Raman. Communication Skills. 2011. [Second Edition]. New Delhi: Oxford University Press.		
4.	Terry O'Brien. Effective Speaking Skills. 2011. New Delhi: Rupa Publishers.		

5.	BarunMitra. Effective Technical Communication: A Guide for Scientists and Engineers. 2015. New Delhi: Oxford University Press.		
Mode of Evaluation: Online Quizzes, Presentation, Role play, Group Discussions, Assignments, Mini project.			
List of Challenging Experiments (Indicative)			CO:1,2,3,4,5
1.	Speaking: Introduce yourself using Temperament Sorter	8 hours	
2.	Reading: Loud Reading with focus on pronunciation	4 hours	
3.	Writing: Descriptive Writing – Process Compare & Contrast – Product description	6 hours	
4.	Speaking: Just a Minute / Activities through VIT Community Radio	6 hours	
5.	Writing: Travelogue Writing - 25+ FAQs (Wh-questions) on a place they have visited – Pair work	10 hours	
6.	Speaking: Discuss facts and opinions using question tags	6 hours	
7.	Writing: Formal Letter Writing focusing on Content	6 hours	
8.	Vocabulary: Correct spelling errors	4 hours	
9.	Speaking: Asking for and giving Directions/Instructions	6 hours	
10.	Writing: Story writing using prompts/pictures	4 hours	
Total Laboratory Hours			60 hours
Mode of evaluation: Online Quizzes, Presentation, Role play, Group Discussions, Assignments, Mini project.
