(2018-2019)

B.Tech (Computer Science and Engineering - CSE)

School of Computer Science and Engineering

B.Tech – Computer Science and Engineering – CSE

CURRICULUM AND SYLLABUS

(2018-2019 Admitted Students)

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

To be a world-renowned centre of education, research and service in computing and allied domains.

MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

- To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

School of Computer Science and Engineering

B.Tech (Computer Science and Engineering - CSE)

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- 1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
- 2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
- 3. Graduates will function in their profession with social awareness and responsibility.
- 4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
- 5. Graduates will be successful in pursuing higher studies in engineering or management.
- 6. Graduates will pursue career paths in teaching or research.

B. Tech Computer Science and Engineering

PROGRAMME OUTCOMES (POs)

- PO_01: Having an ability to apply mathematics and science in engineering applications.
- PO_02: Having a clear understanding of the subject related concepts and of contemporary issues and apply them to identify, formulate and analyse complex engineering problems.
- PO_03: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment
- PO_04: Having an ability to design and conduct experiments, as well as to analyse and interpret data, and synthesis of information
- PO_05: Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice
- PO_06: Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems
- PO_07: Having adaptive thinking and adaptability in relation to environmental context and sustainable development
- PO_08: Having a clear understanding of professional and ethical responsibility
- PO_09: Having cross cultural competency exhibited by working as a member or in teams
- PO_10: Having a good working knowledge of communicating in English communication with engineering community and society
- PO_11: Having a good cognitive load management skills related to project management and finance
- PO_12: Having interest and recognise the need for independent and lifelong learning

B. Tech Computer Science and Engineering

ADDITIONAL PROGRAMME OUTCOMES (APOs)

APO_01: Having an ability to be socially intelligent with good SIQ (Social Intelligence Quotient) and EQ (Emotional Quotient)

APO_02: Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking skills which cannot be codified)

APO_03: Having design thinking capability

APO_04: Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning

APO_05: Having Virtual Collaborating ability

APO_06: Having an ability to use the social media effectively for productive use

APO_07: Having critical thinking and innovative skills

APO_08: Having a good digital footprint

School of Computer Science and Engineering B.Tech (Computer Science and Engineering-CSE)

PROGRAMME SPECIFIC OUTCOMES (PSOs)

- 1. The ability to formulate mathematical models and problem solving skills through programming techniques for addressing real life problems using appropriate data structures and algorithms.
- 2. The ability to design hardware and software interfaces through system programming skills based on the knowledge acquired in the system software and hardware courses.
- 3. The ability to provide solutions through the application of software engineering methodologies and database design principles with internet technologies for solving contemporary issues.

B. Tech Computer Science and Engineering

CSE2	001	COMPUTER ARCHITECTURE AND ORGANIZATION	ON	L		P J	_	<u>C</u>
				3		-) (_
Pre-re	equisite	CSE1003 Digital Logic Design	Sy	llal	ous	ver		
							<u>v1</u>	0
Cours	se Objectives							
 2. 	register org To impart t	students with the basic concepts of fundamental component anization and performance metrics of a computer. he knowledge of data representation in binary and understance algorithms in a typical computer.					on	
3.	To teach stu	idents how to describe machine capabilities and design an ef instruction execution. To introduce students to syntax and sen				-		ıe
4.	techniques	udents understand the importance of memory systems, IO interaction and external storage and their performance metrics for a typic ious alternate techniques for improving the performance of a	cal c	om	pute	er. A	\n	d
Expec	cted Course	Outcome:						
1.		e Von Neumann, Harvard, and CISC and RISC architectures e of machines with different capabilities.	. An	aly	ze t	he		
2.	*	nary format for numerical and characters. Validate efficient a	ılgor	ithı	m fo	or		
3.		nachine level program for given expression on n-address mac	chine	. A	nal	yze	an	d

- Construct machine level program for given expression on n-address machine. Analyze and
 calculate memory traffic for a program execution. Design an efficient data path for an
 instruction format for a given architecture.
- 4. Explain the importance of hierarchical memory organization. Able to construct larger memories. Analyze and suggest efficient cache mapping technique and replacement algorithms for given design requirements. Demonstrate hamming code for error detection and correction.
- 5. Understand the need for an interface. Compare and contrast memory mapping and IO mapping techniques. Describe and Differentiate different modes of data transfer. Appraise the synchronous and asynchronous bus for performance and arbitration.
- 6. Understand the structure and read write mechanisms for different storage systems. Illustrate and suggest appropriate use of RAID levels. Assess the performance of IO and external storage systems.
- 7. Classify parallel machine models. Illustrate typical 6-stage pipeline for overlapped execution. Analyze the hazards and solutions.

Student Learning Outcomes (SLO): 1,2,5

- 1. Having an ability to apply mathematics and science in engineering applications
- 2. Having a clear understanding of the subject related concepts and of contemporary issues
- 5. Having design thinking capability

Module:1	Introduction	and	overview	of	computer	3 hours
	architecture					

Introduction to computer systems - Overview of Organization and Architecture -Functional components of a computer -Registers and register files-Interconnection of components-Organization of the von Neumann machine and Harvard architecture-Performance of processor

Module:2	Data Representation And Computer	6 hours
	Arithmetic	

Fixed point representation of numbers-algorithms for arithmetic operations: multiplication (Booths, Modified Booths) - division (restoring and non-restoring) - Floating point representation with IEEE standards and algorithms for common arithmetic operations- Representation of non-numeric data (character codes).

Module:3 | Fundamentals of Computer Architecture 11 hours Introduction to ISA (Instruction Set Architecture)-Instruction formats- Instruction types and addressing modes- Instruction execution (Phases of instruction cycle)- Assembly language programming-Subroutine call and return mechanisms-Single cycle Data path design-Introduction to multi cycle data path-Multi cycle Instruction execution. Module:4 Memory System **Organization** and 9 hours Architecture Memory systems hierarchy-Main memory organization-Types of Main memory-memory interleaving and its characteristics and performance- Cache memories: address mapping-line sizereplacement and policies- coherence- Virtual memory systems- TLB- Reliability of memory systems- error detecting and error correcting systems. Module:5 | Interfacing and Communication 7 hours I/O fundamentals: handshaking, buffering-I/O techniques: programmed I/O, interrupt-driven I/O, DMA- Interrupt structures: vectored and prioritized-interrupt overhead- Buses: Syn- chronous and asynchronous- Arbitration. **Module:6** | **Device Subsystems** External storage systems-organization and structure of disk drives: Electronic- magnetic and optical technologies- RAID Levels- I/O Performance **Module:7** | **Performance Enhancements** 4 hours Classification of models - Flynns taxonomy of parallel machine models (SISD, SIMD, MISD, MIMD)- Introduction to Pipelining- Pipelined data path-Introduction to hazards Module:8 1 hour **Contemporary issues: Recent Trends** Multiprocessor architecture: Overview of Shared Memory architecture, Distributed architecture. **Total Lecture hours:** 45 hours Text Book(s) David A. Patterson and John L. Hennessy Computer Organization and Design-The Hardware/Software Interface 5th edition, Morgan Kaufmann, 2013. Carl Hamacher, Zvonko Vranesic, Safwat Zaky, Computer organization, Mc Graw Hill, Fifth edition, Reprint 2011. **Reference Books** W. Stallings, Computer organization and architecture, Prentice-Hall, 8th edition, 2013 Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar Recommended by Board of Studies 04-04-2014

CSE2003	DATA STRUCTURES AND ALGORITHMS	L T P J C
		2 0 2 4 4
Pre-requisite	NIL	Syllabus version
		v1.0

Course Objectives:

- 1. To impart the basic concepts of data structures and algorithms.
- 2. To assess how the choice of data structures and algorithm design methods impacts the performance of programs.
- **3.** To provide an insight into the intrinsic nature of the problem and to develop software systems of varying complexity.

Expected Course Outcome:

- 1. Evaluating and providing suitable techniques for solving a problem using basic properties of Data Structures.
- 2. Analyse the performance of algorithms using asymptotic notations.
- 3. Demonstrate knowledge of basic data structures and legal operations on them.
- 4. Illustrate different types of algorithmic approaches to problem solving and assess the tradeoffs involved.
- 5. Analyse basic graph algorithms, operations and applications through a structured (well-defined) algorithmic approach.
- 6. Categorize the feasibility and limitations of solutions to real-world problems.
- 7. Provide efficient algorithmic solution to real-world problems.

Student Learning Outcomes (SLO): 1,6,9

- 1. Having an ability to apply mathematics and science in engineering applications.
- 6. Having an ability to design a component or a product applying all the relevant standards and with realistic constraints
- 9. Having problem solving ability- solving social issues and engineering problems

Module:1 Introduction to Data structures and Algorithms 1 hour

Overview and importance of algorithms and data structures, Stages of algorithm development for solving a problem: Describing the problem, Identifying a suitable technique, Design of an Algorithm, Proof of Correctness of the Algorithm, Computing the time complexity of the Algorithm.

Module:2 | Analysis of Algorithms

3 hours

Asymptotic notations and their significance, Running time of an algorithm, Time-complexity of an algorithm, Performance analysis of an algorithm, Analysis of iterative and recursive algorithms, Master theorem (without proof).

Module:3 Data Structures

7 hours

Importance of data structures, Arrays, Stacks, Queues, Linked list, Trees, Hashing table, Binary Search Tree, Heaps.

Module:4 | **Algorithm Design Paradigms**

8 hours

Divide and Conquer, Brute force, Greedy, Recursive Backtracking and Dynamic programming.

Module:5 | Graph Algorithms

4 hours

Breadth First Search (BFS), Depth First Search (DFS), Minimum Spanning Tree (MST), Single Source Shortest Paths.

Module:6 | Computational Complexity classes

5 hours

Tractable and Intractable Problems, Decidable and Undecidable problems, Computational complexity Classes: P, NP and NP complete - Cooks Theorem (without proof),3-CNF-SAT Problem, Reduction of 3-CNF-SAT to Clique Problem, Reduction of 3-CNF-SAT to Subset sum

CSE2004	DATABASE MANAGEMENT SYSTEM	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	NIL	Sylla	bus	s ve	rs	ion
					V	1.0

Course Objectives:

- 1. To understand the concept of DBMS and ER Modeling.
- 2. To explain the normalization, Query optimization and relational algebra.
- 3. To apply the concurrency control, recovery, security and indexing for the real time data.

Expected Course Outcome:

- 1. Explain the basic concept and role of DBMS in an organization.
- 2. Illustrate the design principles for database design, ER model and normalization.
- 3. Demonstrate the basics of query evaluation and heuristic query optimization techniques.
- 4. Apply Concurrency control and recovery mechanisms for the desirable database problem.
- 5. Compare the basic database storage structure and access techniques including B Tree, B+ Tress and hashing.
- 6. Review the fundamental view on unstructured data and its management.
- 7. Design and implement the database system with the fundamental concepts of DBMS.

Student Learning Outcomes (SLO): 1,5,7

- 2. Having an ability to apply mathematics and science in engineering applications
- 5. Having design thinking capability
- 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning)

Module:1 DATABASE SYSTEMS CONCEPTS AND ARCHITECTURE 5 hours

History and motivation for database systems -characteristics of database approach - Actors on the scene - Workers behind the scene - Advantages of using DBMS approach - Data Models, Schemas, and Instances - Three-Schema Architecture and Data Independence - The Database System Environment - Centralized and Client/Server Architectures for DBMSs - Classification of database management systems.

Module:2 DATA MODELING

4 hours

Entity Relationship Model: Types of Attributes, Relationship, Structural Constraints - Relational Model, Relational model Constraints - Mapping ER model to a relational schema - Integrity constraints

Module:3 | SCHEMA REFINEMENT

6 hours

Guidelines for Relational Schema – Functional dependency; Normalization, Boyce Codd Normal Form, Multi-valued dependency and Fourth Normal form; Join dependency and Fifth Normal form.

Module:4 QUERY PROCESSING AND 5 hours TRANSACTION PROCESSING

Translating SQL Queries into Relational Algebra - heuristic query optimization - Introduction to Transaction Processing - Transaction and System concepts – Desirable properties of Transactions - Characterizing schedules based on recoverability - Characterizing schedules based on serializability

Module:5 CONCURRENCY CONTROL AND A hours RECOVERY TECHNIQUES

Two-Phase Locking Techniques for Concurrency Control – Concurrency Control based on timestamp – Recovery Concepts – Recovery based on deferred update – Recovery techniques based on immediate update - Shadow Paging.

List	of Challenging Experiments (Indicative)	
1.	Write a boot loader - to load a particular OS say TinyOS/ KolibriOS image	3 hours
	- code to access from BIOS to loading the OS - involves little assembly	
	code may use QEMU/virtual machines for emulation of hardware.	
2.	Allocate/free memory to processes in whole pages, find max allocatable	3 hours
	pages, incorporate address translation into the program.	
3.	Create an interrupt to handle a system call and continue the previously	3 hours
	running process after servicing the interrupt.	
4.	Write a Disk driver for the SATA interface. Take care to check readiness of	3 hours
	the controller, locked buffer cache, accept interrupts from OS during the	
	period, interrupting the OS again once done and clearing buffers.	
5.	Demonstrate the use of locks in conjunction with the IDE driver.	3 hours
6.	Run an experiment to determine the context switch time from one process	3 hours
_	to another and one kernel thread to another. Compare the findings.	
7.	Determine the latency of individual integer access times in main memory,	3 hours
	L1 Cache and L2 Cache. Plot the results in log of memory accessed vs	
0	average latency.	2.1
8.	Compare the overhead of a system call with a procedure call.	3 hours
0	What is the cost of a minimal system call?	2 h a
9.	Compare the task creation times. Execute a process and kernel thread,	3 hours
10	determine the time taken to create and run the threads.	2 hours
10.	Determine the file read time for sequential and random access based of	3 hours
	varying sizes of the files. Take care not to read from cached data - used the	
	raw device interface. Draw a graph log/log plot of size of file vs average per-block time.	
	Total Laboratory Hours	30 hours

CSE2006	MICROPROCESSOR AND INTERFACING	L T P J C					
		2 0 2 4 4					
Pre-requisite	CSE1003-Digital Logic Design,	Syllabus version					
	CSE2001-Computer Architecture and Organization						
		v1.0					

Course Objectives:

- 1. Students will gain knowledge on architecture, accessing data and instruction from memory for processing.
- 2. Ability to do programs with instruction set and control the external devices through I/O interface
- 3. Generate a system model for real world problems with data acquisition, processing and decision making with aid of micro controllers and advanced processors.

Expected Course Outcome:

- 1. Recall the basics of processor, its ways of addressing data for operation by instruction set.
- 2. Execute basic and advanced assembly language programs.
- 3. Learn the ways to interface I/O devices with processor for task sharing.
- 4. Recall the basics of co-processor and its ways to handle float values by its instruction set.
- 5. Recognize the functionality of micro controller, latest version processors and its applications.
- 6. Acquire design thinking capability, ability to design a component with realistic constraints, to solve real world engineering problems and analyze the results.

Student Learning Outcomes (SLO): 2, 5, 9

- 3. Having a clear understanding of the subject related concepts and of contemporary issues
- 5. Having design thinking capability
- 9. Having problem solving ability- solving social issues and engineering problems

Module:1	INTRODUCTION	ON		TO	8086		6 hours
	MICROPROCE	ESSOI	R				

Introduction to 8086, Pin diagram, Architecture, addressing mode and Instruction set

Module:2 INTRODUCTION TO ALP

5 hours

Tools- Assembler Directives, Editor, assembler, debugger, simulator and emulator. E.g., ALP Programs-Arithmetic Operations and Number System Conversions, Programs using Loops, If then else, for loop structures

Module:3 | Advanced ALP

2 hours

Interrupt programming using DOS BIOS function calls, File Management

Module:4 | Introduction to Peripheral Interfacing-I

5 hours

PPI 8255, Timer 8253, Interrupt controller-8259

Module:5 Introduction to Peripheral Interfacing-

4 hours

IC 8251 UART, Data converters (A/D and D/A Converter), seven segment display and key-board interfacing

Module:6 | Co-Processor

4 hours

Introduction to 8087, Architecture, Instruction set and ALP Programming

Module:7 Introduction to Arduino Boards

2 hours

Introduction to Microcontroller- Quark SOC processor, programming, Arduino Boards using GPIO (LED, LCD, Keypad, Motor control and sensor), System design application and case study.

Module:3 CLIENT-SIDE PROCESSING AND 7 hour SCRIPTING JavaScript Introduction –Functions – Arrays – DOM, Built-in Objects, Regular Expression Exceptions, Event handling, Validation- AJAX - JQuery.			s and analyze one caste concepts of wee	brogramme an				
Expected Course Outcome: After successfully completing the course the student should be able to 1. Differentiate web protocols and web architecture. 2. Apply JavaScript, HTML and CSS effectively to create interactive and dynamic websites. 3. Implement client side scripting using JavaScript. 4. Develop applications using Java. 5. Implement server side script using PHP, JSP and Servlets. 6. Develop XML based web applications. 7. Develop application using recent environment like Node JS, Angular JS, JSON and AJAX Student Learning Outcomes (SLO): 2, 5, 6, 17 2. Having a clear understanding of the subject related concepts and of contemporary issues. 5. Having design thinking capability 6. Having an ability to design a component or a product applying all the relevant standards and with realistic constraints 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice Module:1 INTRODUCTION TO INTERNET 2 hound Internet Overview- Networks - Web Protocols — Web Organization and Addressing - We Browsers and Web Servers -Security and Vulnerability-Web System Architecture - URL Domain Name - Client-side and server-side scripting. Module:2 WEB DESIGNING 4 hound HTML5 - Form elements, Input types and Media elements, CSS3 - Selectors, Box Mode Backgrounds and Borders, Text Effects, Animations, Multiple Column Layout, User Interface. Module:3 CLIENT-SIDE PROCESSING AND 7 hounds SCRIPTING JavaScript Introduction -Functions - Arrays - DOM, Built-in Objects, Regular Expression Exceptions, Event handling, Validation- AJAX - JQuery.	-		w the client-server model of Internet pro	ogramming works	s.			
After successfully completing the course the student should be able to 1. Differentiate web protocols and web architecture. 2. Apply JavaScript, HTML and CSS effectively to create interactive and dynamic websites. 3. Implement client side scripting using JavaScript. 4. Develop applications using Java. 5. Implement server side script using PHP, JSP and Servlets. 6. Develop XML based web applications. 7. Develop application using recent environment like Node JS, Angular JS, JSON and AJAX Student Learning Outcomes (SLO): 2, 5, 6, 17 2. Having a clear understanding of the subject related concepts and of contemporary issues. 5. Having design thinking capability 6. Having an ability to design a component or a product applying all the relevant standards and with realistic constraints 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice Module:1 INTRODUCTION TO INTERNET 2 houn Internet Overview- Networks - Web Protocols — Web Organization and Addressing - We Browsers and Web Servers -Security and Vulnerability-Web System Architecture — URL Domain Name — Client-side and server-side scripting. Module:2 WEB DESIGNING 4 hounds and Borders, Text Effects, Animations, Multiple Column Layout, User Interface. Module:3 CLIENT-SIDE PROCESSING AND 7 hounds SCRIPTING JavaScript Introduction — Functions — Arrays — DOM, Built-in Objects, Regular Expression Exceptions, Event handling, Validation- AJAX - JQuery.			<u> </u>	-

CSE4001	PARALLEL AND DISTRIBUTED COMPUTING		L	T	P	J	C
			2	0	2	4	4
Pre-requisite	NIL	Syl	lal	bus	s v	ers	ion
						7	v1.0
Course Objectiv	res:						
 To introd paradigm 	uce the fundamentals of parallel and distributed computing arc. s.	hitect	ur	es	an	d	
	stand the technologies, system architecture, and communication the growth of parallel and distributed computing systems.	n arch	ite	ecti	ure	e th	at
3. To develo	p and execute basic parallel and distributed application using l	oasic	pro	ogı	rar	nm	ing

Expected Course Outcome:

models and tools.

Students who complete this course successfully are expected to:

- 1. Design and implement distributed computing systems.
- 2. Asses models for distributed systems.
- 3. Design and implement distributed algorithms.
- 4. Experiment with mechanisms such as client/server and P2P algorithms, remote procedure calls (RPC/RMI), and consistency.
- 5. Analyse the requirements for programming parallel systems and critically evaluate the strengths and weaknesses of parallel programming models.
- 6. Differentiate between the major classes of parallel processing systems.
- 7. Analyse the efficiency of a parallel processing system and evaluate the types of application for which parallel programming is useful.

Student Learning Outcomes (SLO): 2, 5, 14, 17

- 3. Having a clear understanding of the subject related concepts and of contemporary issues.
- 5. Having design thinking capability.
- 14. Having an ability to design and conduct experiments, as well as to analyze and interpret data.
- 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice.

Module:1Parallelism Fundamentals2 hoursMotivation - Key Concepts and Challenges - Overview of Parallel computing - Flynn's

Taxonomy – Multi-Core Processors – Shared vs Distributed memory.

Module:2 | Parallel Architectures

3 hours

Introduction to OpenMP Programming – Instruction Level Support for Parallel Programming – SIMD – Vector Processing – GPUs.

Module: 3 | Parallel Algorithm and Design

5 hours

Preliminaries – Decomposition Techniques – Characteristics of Tasks and Interactions – Mapping Techniques for Load balancing – Parallel Algorithm Models.

Module:4 Introduction To Distributed Systems

4 hours

Introduction – Characterization of Distributed Systems – Distributed Shared Memory – Message Passing – Programming Using the Message Passing Paradigm – Group Communication – Case Study (RPC and Java RMI).

Module:5 | Coordination

6 hours

Time and Global States – Synchronizing Physical Clocks – Logical Time and Logical Clock – Coordination and Agreement – Distributed Mutual Exclusion – Election Algorithms – Consensus and Related Problems.

Module:6 Distributed Transactions	6 hours
-----------------------------------	---------

Tran	saction	And Concurrency Control	- Nested Transact	tions –	Locks - Opt	imistic Concurrency
Cont	trol – T	imestamp Ordering Distribu	ited Transactions -	- Flat a	and Nested – A	Atomic – Two Phase
Com	mit Pro	tocol – Concurrency Contro	ol.

EEE1001	Basic Electrical and Electronics Engineering	L T P J C
		2 0 2 0 3
Pre-requisite	NIL	Syllabus version
		v. 1.0
Course Objectiv	ves:	

- 1. To understand the various laws and theorems applied to solve electric circuits and networks
- 2. To provide the students with an overview of the most important concepts in Electrical and Electronics Engineering which is the basic need for every engineer

Expected Course Outcome:

- 1. Solve basic electrical circuit problems using various laws and theorems
- 2. Analyze AC power circuits and networks, its measurement and safety concerns
- 3. Classify and compare various types of electrical machines
- 4. Design and implement various digital circuits
- 5. Analyze the characteristics of semiconductor devices and comprehend the various modulation techniques in communication engineering
- 6. Design and conduct experiments to analyze and interpret data

Student Learning Outcomes (SLO): 1,2,9

- 1. Having an ability to apply mathematics and science in engineering applications
- 2. Having a clear understanding of the subject related concepts and of contemporary issues
- **9.** Having problem solving ability- solving social issues and engineering problems

Module:1 DC circuits 5 hours

Basic circuit elements and sources, Ohms law, Kirchhoff's laws, series and parallel connection of circuit elements, Node voltage analysis, Mesh current analysis, Thevenin's and Maximum power transfer theorem

Module:2 AC circuits 6 hours

Alternating voltages and currents, AC values, Single Phase RL, RC, RLC Series circuits, Power in AC circuits-Power Factor- Three Phase Systems – Star and Delta Connection- Three Phase Power Measurement – Electrical Safety –Fuses and Earthing, Residential wiring

Module:3 Electrical Machines

7 hours

Construction, Working Principle and applications of DC Machines, Transformers, Single phase and Three-phase Induction motors, Special Machines-Stepper motor, Servo Motor and BLDC motor

Module:4 | Digital Systems

5 hours

Basic logic circuit concepts, Representation of Numerical Data in Binary Form- Combinational logic circuits, Synthesis of logic circuits

Module:5 Semiconductor devices and Circuits

7 hours

Conduction in Semiconductor materials, PN junction diodes, Zener diodes, BJTs, MOSFETs, Rectifiers, Feedback Amplifiers using transistors. Communication Engineering: Modulation and Demodulation - Amplitude and Frequency Modulation

Total Le	ecture hours:	30 hours	

Text Book(s)

1. John Bird, 'Electrical circuit theory and technology', Newnes publications, 4 t h Edition, 2010.

Reference Books

MAT2002	Applications of Differential and Diff	ference L	T	P	J	C	
	Equations						
		3	0	2	0	4	
Pre-requisite	MAT1011 - Calculus for Engineers	Syllabus	. Vei	rsio	1		
		V	1.0				
Course Objectiv	es:						
The course is aimed at							
1. Presenting the elementary notions of Fourier series, which is vital in practical harmonic							
analysis		_					
2. Imparting the knowledge of eigenvalues and eigen vectors of matrices and the transform							

- 2. Imparting the knowledge of eigenvalues and eigen vectors of matrices and the transform techniques to solve linear systems, that arise in sciences and engineering
- 3. Enriching the skills in solving initial and boundary value problems
- 4. Impart the knowledge and application of difference equations and the Z-transform in discrete systems, that are inherent in natural and physical processes

Expected Course Outcomes:

At the end of the course the student should be able to

- 1. Employ the tools of Fourier series to find harmonics of periodic functions from the tabulated values
- 2. Apply the concepts of eigenvalues, eigen vectors and diagonalisation in linear systems
- 3. Know the techniques of solving differential equations
- 4. Understand the series solution of differential equations and finding eigen values, eigen functions of Strum-Liouville's problem
- 5. Know the Z-transform and its application in population dynamics and digital signal processing
- 6. Demonstrate MATLAB programming for engineering problems

Student Learning Outcomes (SLO): 1, 2, 9

- 1. Having an ability to apply mathematics and science in engineering applications
- 2. Having a clear understanding of the subject related concepts and of contemporary issues
- 9. Having problem solving ability- solving social issues and engineering problems

Module:1 Fourier series 6 hours

Fourier series - Euler's formulae - Dirichlet's conditions - Change of interval - Half range series - RMS value - Parseval's identity - Computation of harmonics

Module:2 Matrices 6 hours

 $\label{lem:eq:continuous} \begin{tabular}{ll} Eigen values and Eigen vectors - Properties of eigenvalues and eigen vectors - Cayley-Hamilton theorem - Similarity of transformation - Orthogonal transformation and nature of quadratic form \\ \end{tabular}$

Module:3 Solution of ordinary differential equations 6 hours

Linear second order ordinary differential equation with constant coefficients – Solutions of homogenous and non-homogenous equations - Method of undetermined coefficients – method of variation of parameters – Solutions of Cauchy-Euler and Cauchy-Legendre differential equations

Module:4	Solution of differential equations through	8 hours
	Laplace transform and matrix method	

Solution of ODE's - Nonhomogeneous terms involving Heaviside function, Impulse function - Solving nonhomogeneous system using Laplace transform - Reduction of *n*th order differential equation to first order system - Solving nonhomogeneous system of first

order differential equations (X' = AX + G) and X'' = AX

			v1	0.			

- 1. Understanding basic concepts of linear algebra to illustrate its power and utility through applications to computer science and Engineering.
- 2. apply the concepts of vector spaces, linear transformations, matrices and inner product spaces in engineering.
- 3. solve problems in cryptography, computer graphics and wavelet transforms

Expected Course Outcomes

At the end of this course the students are expected to learn

- 1. the abstract concepts of matrices and system of linear equations using decomposition methods
- 2. the basic notion of vector spaces and subspaces
- 3. apply the concept of vector spaces using linear transforms which is used in computer graphics and inner product spaces
- 4. applications of inner product spaces in cryptography
- 5. Use of wavelet in image processing.

Student Learning Outcomes(SLO) 1,2,7

- 1. Having an ability to apply knowledge of Mathematics in Science and Engineering
- 2. Having a clear understanding of the subject related concepts and of contemporary issues
- 7. Having computational thinking

Module:1 | System of Linear Equations:

6 hours

Gaussian elimination and Gauss Jordan methods - Elementary matrices- permutation matrix - inverse matrices - System of linear equations - - LU factorizations.

Module:2 | Vector Spaces

6 hours

The Euclidean space R^n and vector space- subspace —linear combination-span-linearly dependent-independent- bases - dimensions-finite dimensional vector space.

Module:3 | Subspace Properties:

6 hours

 $Row\ and\ column\ spaces\ \textbf{-}Rank\ and\ nullity-Bases\ for\ subspace-invertibility-\ Application\ in\ interpolation.$

Module:4 | Linear Transformations and applications

7 hours

Linear transformations – Basic properties-invertible linear transformation - matrices of linear transformations - vector space of linear transformations – change of bases – similarity

Module:5 | Inner Product Spaces:

6 hours

Dot products and inner products – the lengths and angles of vectors – matrix representations of inner products- Gram-Schmidt orthogonalisation

Module:6 Applications of Inner Product Spaces:

6 hours

QR factorization- Projection - orthogonal projections - relations of fundamental subspaces - Least Square solutions in Computer Codes

Module:7	Applications of Linear equat	ions :		6 hours

CSE1007	JAVA PROGRAMMING	I	T	P	J	C
		3	0	2	0	4
Pre-requisite	NIL	Sylla	bu	s ve	ers	ion
					V	1.0

- 1. To impart the core language features of Java and its Application Programming Interfaces (API).
- 2. To demonstrate the use of threads, exceptions, files and collection frameworks in Java.
- 3. To familiarize students with GUI based application development and database connectivity.

Expected Course Outcome:

- 1. Comprehend Java Virtual Machine architecture and Java Programming Fundamentals.
- 2. Design applications involving Object Oriented Programming concepts such as inheritance, association, aggregation, composition, polymorphism, abstract classes and interfaces.
- 3. Design and build multi-threaded Java Applications.
- 4. Build software using concepts such as files, collection frameworks and containers.
- 5. Design and implement Java Applications for real world problems involving Database Connectivity.
- 6. Design Graphical User Interface using JavaFX.
- 7. Design, Develop and Deploy dynamic web applications using Servlets and Java Server Pages.

Student Learning Outcomes (SLO): 1, 9, 14

- 1. Having an ability to apply mathematics and science in engineering applications
- 9. Having problem solving ability-solving social issues and engineering problems
- 14. Having an ability to design and conduct experiments, as well as to analyze and interpret data

Module:1 Java Fundamentals

4 hours

Java Basics: Java Design goal - Features of Java Language - JVM - Bytecode - Java source file structure basic programming constructs Arrays one dimensional and multi-dimensional enhanced for loop String package

Module:2 | Object Oriented Programming

5 hours

Class Fundamentals - Object Object reference array of objects constructors methods over- loading this reference static block - nested class inner class garbage collection finalize() Wrapper classes Inheritance types - use of super - Polymorphism abstract class interfaces packages and sub packages.

Module:3 | **Robustness and Concurrency**

6 hours

Exception Handling - Exceptions Errors - Types of Exception - Control Flow in Exceptions

- Use of try, catch, finally, throw, throws in Exception Handling - user defined exceptions - Multithreading Thread creation sharing the workload among threads synchronization inter thread communication deadlock.

Module:4 | Files, Streams and Object serialization

7 hours

Data structures: Java I/O streams Working with files Serialization and deserialization of objects Lambda expressions, Collection framework List, Map, Set Generics Annotations

Module:5 GUI Programming and Database Connectivity

7 hours

GUI programming using JavaFX, exploring events, controls and JavaFX menus Accessing databases using JDBC connectivity.

CSE3006	EMBEDDED SYSTEMS DESIGN	L T P J C
		3 0 0 4 4
Pre-requisite	CSE2006-Microprocessor and Interfacing	Syllabus version
		v1.0
Course Objective		
	students to various challenges and and constraints of specia	l purpose computing
	terms of resources and functional requirements.	
	ce students to various components of typical embedded syst	
	ors, data converters, UART etc., their interfacing, programm	
	any smart systems and various serial communication proto	cois for optimal
	s interfacing and communication. Eudents understand the importance of program modeling, op	atimization
	and debugging tools for product development and explore	
	cheduling issues in terms of resources and deadline.	various solutions for
Teal time s	cheduling issues in terms of resources and deadine.	
Expected Course	Outcome	
	e challenges in designing an embedded system using variou	s microcontrollers
and interfa		5 inicrocontrollers
· · · · · · · · · · · · · · · · · · ·	ntiate and outline various requirements for conventional con	nnuting systems and
embedded	•	apating systems and
	e the functionality of any special purpose computing system	and by proposing
	ions at prototype level to solve engineering problems.	and of proposing
	te the working principle and interfacing of typical compone	nts of an embedded
system.		
5. Design pro	gram models, apply various optimization techniques and de	emonstrate the
debugging	tools in simulation environment.	
6. To analyze	the pros and cons of real time scheduling algorithms and so	aggest appropriate
	r various issues.	
7. To evaluat	e the working principle of serial communication protocols a	and their appropriate
usage.		
,	g Outcomes (SLO): 6, 7, 9	
	ability to design a component or a product applying all the	relevant standards
	ealistic constraints.	
	mputational thinking (Ability to translate vast data in to abs	tract concepts and to
	database reasoning).	muchlama

INTERNET OF THINGS	L T P J C						
	3 0 0 4 4						
NIL	Syllabus version						
	v1.0						
s:							
1. To apprise students with basic knowledge of IoT that paves a platform to understand							
gical design and business models							
	NIL s: students with basic knowledge of IoT that paves a platform t						

- 2. To teach a student how to analyze requirements of various communication models and protocols for cost-effective design of IoT applications on different IoT platforms.
- 3. To explain the students how to code for an IoT application and deploy for real-time scenario.

Expected Course Outcome:

- 1. Describe various layers of IoT protocol stack and describe protocol functionalities.
- 2. Evaluate efficiency trade-offs among alternative communication models for an efficient IoT application design.
- 3. Comprehend advanced IoT applications and technologies from the basics of IoT.
- 4. Understand working principles of various sensor for different IoT platforms.
- 5. Estimate the cost of hardware and software for low cost design IoT applications.
- 6. Compare various application business models of different domains.
- 7. Solve real-time problems and demonstrate IoT applications in various domains using prototype models.

Student Learning Outcomes (SLO): 2, 5, 6

- 2. Having a clear understanding of the subject related concepts and of contemporary issues
- 5. Having design thinking capability
- 6. Having an ability to design a component or a product applying all the relevant standards and with realistic constraints.

Module:1 Introduction To Internet of Things 5 hours

Definition & Characteristics of IoT - Challenges and Issues - Physical Design of IoT, Logical Design of IoT - IoT Functional Blocks, Security.

Module:2 Components In Internet of Things

7 hours

Control Units Communication modules Bluetooth Zigbee Wifi GPS- IOT Protocols (IPv6, 6LoWPAN, RPL, CoAP etc), MQTT, Wired Communication, Power Sources.

Module:3 | Technologies Behind IoT

7 hours

Four pillars of IOT paradigm, - RFID, Wireless Sensor Networks, SCADA (Supervisory Control and Data Acquisition), M2M - IOT Enabling Technologies - BigData Analytics, Cloud Computing, Embedded Systems.

Module:4 Programming The Microcontroller For 10T

Working principles of sensors IOT deployment for Raspberry Pi /Arduino /Equivalent plat-formReading from Sensors, Communication: Connecting microcontroller with mobile devices, communication through Bluetooth, wifi and USB - Contiki OS- Cooja Simulator.

Module:5 Resource Management in IoT 4 hours

Clustering, Clustering for Scalability, Clustering Protocols for IOT.

Module:6 From The Internet Of Things To The Web Of Things

The Future Web of Things Set up cloud environment Cloud access from sensors Data Analytics for IOT- Case studies- Open Source e-Health sensor platform Be Close Elderly monitoring Other recent projects.

CSE3011	ROBOTICS AND ITS APPLICATIONS	L T P J C
		3 0 0 4 4
Pre-requisite	NIL	Syllabus version
		v1.0

- 1. To introduce basic concepts, parts of robots and types of robots
- 2. To make the students familiar with various drive systems of robots, sensors and their applications in programming of robots
- 3. To discuss the applications of robots, and implementations of robots

Expected Course Outcome:

- 1. Explain the basic concepts of working of robot
- 2. Analyze the function of sensor in robot and design the robotic arm with various tools
- 3. Program the robot for a typical application and path planning using robotic vision
- 4. Understand the various robot programming languages
- 5. Conduct and design the experiments for various robot operations
- 6. Use the advanced techniques for robot processing

Student Learning Outcomes (SLO): 1, 6, 17

- 1. Having an ability to apply mathematics and science in engineering applications
- 6. Having an ability to design a component or a product applying all the relevant standards and with realistic constraint
- 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice

Module:1 Introduction

3 hours

Introduction, brief history, types, classification and usage, science and technology of robots, Artificial Intelligence in Robotics, some useful websites, textbooks and research journals

Module:2 | Elements of Robots-Joints, Links, Actuators, and Sensors

7 hours

Representation of joints, link representation using D-H parameters, Examples of D-H parameters and link transforms, different kind of actuators, stepper-DC-servo-and brushless motors- model of a DC servo motor-types of transmissions-purpose of sensor-internal and external sensor-common sensors-encoders-tachometers-strain gauge based force torque sensor-proximity and distance measuring sensors-and vision

Module:3 | End Effectors

5 hours

Classification of end effectors-tools as end effectors-drive system for grippers-mechanical adhesive- vacuum magnetic-grippers-hooks and scoops-gripper force analysis-and gripper designactive and passive grippers

Module:4 | Planning and Navigation

6 hours

Introduction, path planning-overview-road map path planning-cell decomposition path planning-potential field path planning-obstacle avoidance-case studies

Module:5 | Vision system

6 hours

Robotic vision systems-image representation-object recognition-and categorization-depth measurement- image data compression-visual inspection-software considerations

Module:6 | **Robot Programming**

7 hours

Introduction to robot languages-VAL-RAPID-language-basic commands-motion instructions-pick and place operation using industrial robot manual mode-automatic mode-subroutine command based programming-move master command language-introduction-syntax-simple problems

CSE3013 ARTIFICIAL INTELLIGENCE 1 T T J C Sylabus version v1.0						
Pre-requisite NIL Syllabus version v1.0	CSE3013	ARTIFI	CIAL INTE	ELLIGE	NCE	L T P J C
Course Objectives: 1. To impart artificial intelligence principles, techniques and its history 2. To assess the applicability, strengths, and weaknesses of the basic knowledge representation, problem solving, and learning methods in solving engineering problems 3. To develop intelligent systems by assembling solutions to concrete computational problems Expected Course Outcome: 1. Evaluate Artificial Intelligence (AI) methods and describe their foundations. 2. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation and learning. 3. Demonstrate knowledge of reasoning and knowledge representation for solving real world problems 4. Analyze and illustrate how search algorithms play vital role in problem solving 5. Illustrate the construction of learning and expert system 6. Discuss current scope and limitations of AI and societal implications. Student Learning Outcomes (SLO): 1, 7, 17 2. Having an ability to apply mathematics and science in engineering applications 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning) 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice Module: 1. Artificial Intelligence and its Issues 9 hours Definitions - Importance of AI, Evolution of AI - Applications of AI, Classification of AI systems with respect to environment, Knowledge Inferring systems and Planning, Uncertainty and towards Learning Systems. Module: 2. Overview to Problem Solving 5 hours Problem solving by Search, Problem space - State space, Blind Search - Types, Performance measurement. Module: 3. Heuristic Search 1 hours Types, Game playing mini-max algorithm, Alpha-Beta Pruning Module: 4. Knowledge Representation and applications Module: 5. Uncertainty and knowledge Reasoning 7 hours Overview Definition of uncertainty, Bayes Rule Inference, Belief Network, Utility Based System, Decision Network Module: 6.	D	NITT

Pre-requisite Data Mining CSE3019 Syllabus vers V. Course Objectives: 1. To understand the various types of data, apply and evaluate the principles of data visualization 2. Acquire skills to apply visualization techniques to a problem and its associated dataset. 3. To apply structured approach to create effective visualizations thereby building visualization dashboard to support decision making. Expected Course Outcome: 1. Identify the different data types, visualization types to bring out the insight. Relate the visualization towards the problem based on the dataset. 2. Identify the different attributes and showcasing them in plots. Identify and create various visualizations for geospatial and table data. 3. Ability to visualize categorical, quantitative and text data. Illustrate the integration of visualization tools with hadoop. 4. Ability to visualize categorical, quantitative and text data. 5. Design visualization dashboard to support the decision-making on large scale data. 6.Match the knowledge gained with the industries latest technologies. 7. Ability to create and interpret plots using R/Python.	CSE3020	DATA VISUALIZATION	L T P J C

4. Having sense making skills of creating unique insights in what is being seen or observed.			

- 4. Having sense making skills of creating unique insights in what is being seen or observed.
- 7. Having computational thinking.
- 12. Having adaptive thinking and adaptability

Module:1 Introduction to Data Visualization 4 hours Overview of data visualization - Data Abstraction - Analysis: Four Levels for Validation- Task Abstraction - Analysis: Four Levels for Validation

Module:2 Visualization Techniques 5 hours Scalar and point techniques Color maps Contouring Height Plots - Vector visualization techniques Vector properties Vector Glyphs Vector Color Coding Stream Objects.

Module:3 Visual Analytics 3 hours

Visual Variables- Networks and Trees - Map Color and Other Channels- Manipulate View

Visual Analytics Module:4 3 hours

Arrange Tables Geo Spatial data Reduce Items and Attributes

Module:5 Visualization Tools and Techniques 5 hours

Introduction to data visualization tools- Tableau - Visualization using R

Diverse Types Of Visual Analysis Module:6 4 hours

Time- Series data visualization Text data visualization Multivariatedata visualization and case studies

Module:7 **Visualization Dashboard Creations** 4 hours

Dashboard creation using visualization tools for the use cases: Finance-marketing-insurancehealthcare etc.,

CSE3021	SOCIAL AND INFORMATION NETWORKS		L	T	P	J	C
			3	0	0	4	4
Pre-requisite	Data Mining CSE3019	Sy	lla	bu	s v	ers	sion
						v.	1.0

- 1. Understand the components of social networks.
- 2. Model and visualize social networks.
- 3. Understand the role of semantic web in social networks.
- 4. Familiarize with the security concepts of social networks.
- 5. Find out various applications of social networks.

Expected Course Outcome:

- 1. Illustrate the basic components of social networks.
- 2. Analyze the different measurements and metrics of social networks.
- 3. Apply different techniques to detect and evaluate communities in social networks.
- 4. Apply various types of social network models.
- 5. Apply semantic web format to represent social networks.
- 6. Develop social network applications using visualization tools.
- 7. Usage of the security features in social and information networks for various practical applications.

Student Learning Outcomes (SLO): 1,2,9,11,15,17

- 1. Having an ability to apply mathematics and science in engineering applications.
- 2. Having a clear understanding of the subject related concepts and of contemporary issues
- 9. Having problem solving ability- solving social issues and engineering problems.
- 11. Having interest in lifelong learning.
- 15. Having an ability to use the social media effectively for productive use.
- 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice.

Module:1 Introduction 4 hours

Introduction to social network analysis Fundamental concepts in network analysis social network data notations for social network data Graphs and Matrices.

Module:2 Measures & Metrics

Strategic network formation - network centrality measures: degree, betweenness, closeness, eigenvector - network centralizationdensity reciprocity transitivity ego network measures for ego network - dyadic network triadic network - cliques - groups- clustering search.

5 hours

Module:3 Community networks 6 hours

Community structure - modularity, overlapping communities - detecting communities in social networks - Discovering communities: methodology, applications - community measurement - evaluating communities - applications.

Module:4 Models 7 hours

Small world network - WattsStrogatz networks - Statistical Models for Social Networks Net- work evolution models: dynamical models, growing models - Nodal attribute model: expo- nential random graph models Preferential attachment - Power Law - random network model: Erdos-Renyi and Barabasi-AlbertEpidemics - Hybrid models of Network Formation.

Module:5 | Semantic Web 7 hours

Modelling and aggregating social network data developing social semantic application evaluation of web-based social network extraction Data Mining Text Mining in social network Tools case study.

Module:6 Visualization 8 hours

Visualization of social networks novel visualizations and interactions for social networks ap-

CSE3024	WEB MINING	L T P J C
		3 0 2 0 4
Pre-requisite	Nil	Syllabus version
		v. 1.0

- 1. To acquire the knowledge of Web search, indexing and query processing
- 2. To perform web content mining for retrieving most relevant documents
- 3. Analyze on web structure and usage patterns

Expected Course Outcome:

- 1. Recognize the components of a web page and its related security issues
- 2. Build crawler and index the retrieved pages
- 3. Perform analysis on web structure and its content
- 4. Analyze social media data using Machine Learning techniques
- 5. Rene query terms for query expansion
- 6. Design a system to harvest information available on the web to build recommender systems

Student Learning Outcomes (SLO): 1,2,7

- 1. Having an ability to apply mathematics and science in engineering applications
- 2. Having a clear understanding of the subject related concepts and of contemporary issues
- 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning)

Module:1 Introduction

5 hours

Introduction of WWW – Architecture of the WWW – Web Document Representation- Web Search Engine – Challenges - Web security overview and concepts, Web application security, Basic web security model -Web Hacking Basics HTTP & HTTPS URL, Web Under the Cover Overview of Java security Reading the HTML source

Module:2 WEB CRAWLING

5 hours

Basic Crawler Algorithm: Breadth-First/depth-First Crawlers, - Universal Crawlers- Preferential Crawlers: Focused Crawlers - Topical Crawlers.

Module:3 INDEXING

5 hours

Static and Dynamic Inverted Index—Index Construction and Index Compression- Latent Semantic Indexing. Searching using an Inverted Index: Sequential Search - Pattern Matching - Similarity search.

Module:4 | WEB STRUCTURE MINING

8 hour

Link Analysis - Social Network Analysis - Co-Citation and Bibliographic Coupling - Page Rank-Weighted Page Rank- HITS - Community Discovery - Web Graph Measurement and Modelling-Using Link Information for Web Page Classification.

Module:5 WEB CONTENT MINING

8 hours

Classification: Decision tree for Text Document- Naive Bayesian Text Classification - Ensemble of Classifiers. Clustering: K-means Clustering - Hierarchical Clustering - Markov Models - Probability- Based Clustering. Vector Space Model - Latent semantic Indexing - Automatic Topic Extraction from Web Documents.

Module:6 | WEB USAGE MINING

9 hours

Web Usage Mining - Click stream Analysis - Log Files - Data Collection and Pre-Processing - Data Modelling for Web Usage Mining - The BIRCH Clustering Algorithm - Modelling web user interests using clustering- Affinity Analysis and the A Priori Algorithm - Binning - Web usage mining using Probabilistic Latent Semantic Analysis - Finding User Access Pattern via Latent Dirichlet Allocation Model.

CSE4015	HUMAN COMPUTER INTERACTION	L T P J C
		3 0 0 4 4
Pre-requisite	Nil	Syllabus version
		v. 1.0
Course Objectiv		
	e the basic knowledge on the levels of interaction, design mode	· •
	s focusing on the different aspects of human-computer interface	
	he learners to think in design perspective and to evaluate inter-	_
3. To use the	concepts and principles of HCI to analyze and propose solution	on for real life
application	ns	
4. To becom	e familiar with recent technology trends and challenges in HC	I domain
Expected Course	Outcome:	
1. Enumerate	the basic concepts of human, computer interactions	
2. Create the	processes of human computer interaction life cycle	
Analyze a	nd design the various interaction design models	
4. Apply the	interface design standards/guidelines for evaluating the development	oped interactions
5. Establish	he different levels of communication across the application sta	akeholders
	duct usability evaluations and testing methods	
7. Demonstr	ate the principles of human computer interactions through the	prototype
modelling		
Student Learnin	g Outcomes (SLO): 5, 8, 17	
	thinking capability	
0 0	collaborating ability	
_	lity to use techniques, skills and modern engineering tools nec	essary for
engineering pract	•	•

Module:1 HCI FOUNDATIONS 6 hours

Input—output channels, Human memory, Thinking: reasoning and problem solving, Emotion, Individual differences, Psychology and the design of interactive systems, Text entry devices, Positioning, pointing and drawing, Display devices, Devices for virtual reality and 3D interaction, Physical controls, sensors and special devices, Paper: printing and scanning

Module:2 DESIGNING INTERACTION

6 hours

Overview of Interaction Design Models, Discovery - Framework, Collection - Observation, Elicitation, Interpretation - Task Analysis, Storyboarding, Use Cases, Primary Stakeholder Profiles, Project Management Document

Module:3 INTERACTION DESIGN MODELS 8 hours

Model Human Processor - Working Memory, Long-Term Memory, Processor Timing, Keyboard Level Model - Operators, Encoding Methods, Heuristics for M Operator Placement, What the Keyboard Level Model Does Not Model, Application of the Keyboard Level Model, GOMS - CMN-GOMS Analysis, Modeling Structure, State Transition Networks - Three-State Model, Glimpse Model, Physical Models, Fitts' Law

Module:4 GUIDE LINES IN HCI 6 hours

Shneideman's eight golden rules, Norman's Sever principles, Norman's model of interaction, Nielsen's ten heuristics, Heuristic evaluation, contextual evaluation, Cognitive walk-through

Module:5 | COLLABORATION AND COMMUNICATION | 5 hours

Face-to-face Communication, Conversation, Text-based Communication, Group working, Dialog design notations, Diagrammatic notations, Textual dialog notations, Dialog semantics, Dialog analysis and design

Module:6	HUMAN FACTORS AND SECURITY	6 hours
Groupware, l	Meeting and decision support systems, Shared application	ns and artifacts, Frameworks for

grou	ıpware In	nplementing synchronous grou	ipware, Mixed, Aug	mented	d and Virtual R	eality
Mo	dule:7	VALIDATION AND ADV	ANCED CONCEP	TS		6 hours
Val	idations -	Usability testing, Interface Te	esting, User Accepta	nce Te	sting	
Pas	t and fut	ture of HCI: the past, pres	ent and future, pe	rceptua	al interfaces, c	context-awareness and
perc	eption

CSE4019	IMAGE PROCESSING	I	[]	T	P	J	C
		3	3	0	0	4	4
Pre-requisite	Nil	Sylla	ab	us	ve	ers	ion
						V	1.0

- 1. To provide the basic knowledge on image processing concepts.
- 2. To develop the ability to apprehend and implement various image processing algorithms.
- 3. To facilitate the students to comprehend the contextual need pertaining to various image processing applications.

Expected Course Outcome:

- 1. Ascertain and describe the basics of image processing concepts through mathematical interpretation.
- 2. Acquire the knowledge of various image transforms and image enhancement techniques involved.
- 3. Demonstrate image restoration process and its respective filters required.
- 4. Experiment the various image segmentation and morphological operations for a meaningful partition of objects.
- 5. Design the various basic feature extraction and selection procedures and illustrate the various image compression techniques and their applications.
- 6. Analyze and implement image processing algorithms for various real-time applications.

Student Learning Outcomes (SLO): 1,9,18

- 1. Having an ability to apply mathematics and science in engineering applications.
- 9. Having problem solving ability-solving social issues and engineering problems.
- 18. Having critical thinking and innovative skills.

Module:1	Introduction	-	Digital	Image,	its	6 hours
	Representation					

Image Representation and Image Processing Paradigm - Elements of digital image processing-Image model. Sampling and quantization-Relationships between pixels- Connectivity, Distance Measures between pixels - Color image (overview, various color models)-Various image formats bmp, jpeg, tiff, png, gif, etc.

Module:2 Digital Image Properties - Operations on Digital Images 6 hours

Topological Properties of Digital Images-Histograms, Entropy, Eigen Values-Image Quality Metrics-Noise in Images Sources, types. Arithmetic operations - Addition, Subtraction, Multiplication, Division-Logical operations NOT, OR, AND, XOR-Set operators-Spatial operations Single pixel, neighbourhood, geometric-Contrast Stretching-Intensity slicing-Bit plane slicing Power Law transforms

Module:3 | Image Enhancement

6 hours

Spatial and Frequency domain-Histogram processing-Spatial filtering-Smoothening spatial filters-Sharpening spatial filters- Discrete Fourier Transform-Discrete Cosine Transform-Haar Transform -Hough Transform-Frequency filtering-Smoothening frequency filters-Sharpening frequency filters-Selective filtering.

Module:4	Digital	Image	Restoration-	Digital	7 hours
	Image R	egistratio	on		

Noise models - Degradation models-Methods to estimate the degradation-Image de-blurring-Restoration in the presence of noise only spatial filtering-Periodic noise reduction by frequency domain filtering-Inverse filtering-Wiener Filtering. Geometrical transformation-Point based methods- Surface based methods-Intensity based methods

Module:5	Feature Extraction					6 hours
features-Co	nterest (ROI) selection - Fea lor, Shape features-Contour and representation-Texture d CA).	extraction and rep	resent	tatior	n-Homoge	enous region
Module:6	Image Segmentation- Image Processing	Morphological				6 hours
segmentation	ty detection-Edge linking ar on- Histogram based segmer d Erosion-Opening and Clos	ntation.Object reco	gnitio	n bas	sed on sha	pe descriptors.
Module:7	Image Coding and Co	mpression				6 hours
mann coding coding techn	mpression versus lossy con g-Bitplane coding-Shift coon iques-Lossy compression a seline lossy JPEG, based on	les-Block Truncati algorithm using th	ion co	oding	-Arithmet	cic coding-Predictive
Module:8	Recent Trends					2 hours
	Recent Hends					
		Total Lecture ho	urs:	45 l	hours

		2	0	2	4	4
Pre-requisite	Nil	Syllabus version				ion
					V	1.0
Course Objectiv	es:					
1. Ability to com	prehend the concept of supervised and unsupervised learning te	echnique	es			
2. Differentiate re	egression, classification and clustering techniques and to impler	ment the	eir			

- 2. Differentiate regression, classification and clustering techniques and to implement their algorithms.
- 3. To analyze the performance of various machine learning techniques and to select appropriate features for training machine learning algorithms.

Expected Course Outcome:

- 1. Recognize the characteristics of machine learning that makes it useful to solve real-world problems.
- 2. Provide solution for classification and regression approaches in real-world applications.
- 3. Gain knowledge to combine machine learning models to achieve better results.
- 4. Choose an appropriate clustering technique to solve real world problems.
- 5. Realize methods to reduce the dimension of the dataset used in machine learning algorithms.
- 6. Choose a suitable machine learning model, implement and examine the performance of the chosen model for a given real world problems.
- 7. Understand cutting edge technologies related to machine learning applications.

Student Learning Outcomes (SLO): 5,7,9

- 5. Having design thinking capability
- 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning)
- 9. Having problem solving ability solving social issues and engineering problems

Module:1 Introduction to Machine Learning

3 hours

What is Machine Learning, Examples of Various Learning Paradigms, Perspectives and Issues, Version Spaces, Finite and Infinite Hypothesis Spaces, PAC Learning

Module:2 | Supervised Learning - I

4 hours

Learning a Class from Examples, Linear, Non-linear, Multi-class and Multi-label classification, Generalization error bounds: VC Dimension, Decision Trees: ID3, Classification and Regression Trees, Regression: Linear Regression, Multiple Linear Regression, Logistic Regression.

Module:3 | Supervised Learning - II

5 hours

Neural Networks: Introduction, Perceptron, Multilayer Perceptron, Support vector machines: Linear and Non-Linear, Kernel Functions, K-Nearest Neighbors

Module:4 | Ensemble Learning

3 hours

Ensemble Learning Model Combination Schemes, Voting, Error-Correcting Output Codes, Bagging: Random Forest Trees, Boosting: Adaboost, Stacking

Module:5 Unsupervised Learning - I

7 hours

Introduction to clustering, Hierarchical: AGNES, DIANA, Partitional: K-means clustering, K-Mode Clustering, Self-Organizing Map, Expectation Maximization, Gaussian Mixture Models

Module:6 Unsupervised Learning - II

3 hours

Principal components analysis (PCA), Locally Linear Embedding (LLE), Factor Analysis

Module:7 | Machine Learning in Practice

3 hours

Machine Learning in Practice Design, Analysis and Evaluation of Machine Learning Experiments,

Featu	ıre selec	tion Mechanisms, Other Issues: Imbalanced data, M	lissing Values,	Outliers
Mod	ule:8	Recent Trends		2 hours

Pre-requisite	Chemistry of 12 th standard or equivalent	Syllabus versio	on
		V:1	.1

- 1. To make students understand and appreciate the unity of life in all its forms, the implications of life style on the environment.
- 2. To understand the various causes for environmental degradation.
- 3. To understand individuals contribution in the environmental pollution.
- 4. To understand the impact of pollution at the global level and also in the local environment.

Expected Course Outcome:

Students will be able to

- 1. Students will **recognize** the environmental issues in a problem oriented interdisciplinary perspectives
- 2. Students will **understand** the key environmental issues, the science behind those problems and potential solutions.
- 3. Students will **demonstrate** the significance of biodiversity and its preservation
- 4. Students will **identify** various environmental hazards
- 5. Students will **design** various methods for the conservation of resources
- 6. Students will **formulate** action plans for sustainable alternatives that incorporate science, humanity, and social aspects
- 7. Students will have foundational **knowledge** enabling them to make sound life decisions as well as enter a career in an environmental profession or higher education.

Student Learning Outcomes (SLO): 1,2,3,4,5,9,11,12

- 1) Having an ability to apply mathematics and science in engineering applications
- 2) Having a clear understanding of the subject related concepts and of contemporary issues
- 3) Having an ability to be socially intelligent with good SIQ (Social Intelligence Quotient) and EQ (Emotional Quotient)
- 4) Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking skills which cannot be codified)
- 5) Having design thinking capability
- 9) Having problem solving ability- solving social issues and engineering problems
- 10) Having a clear understanding of professional and ethical responsibility
- 11) Having interest in lifelong learning

Module:1

Key environmental problems, their basic causes and sustainable solutions. IPAT equation. Ecosystem, earth – life support system and ecosystem components; Food chain, food web, Energy flow in ecosystem; Ecological succession- stages involved, Primary and secondary succession, Hydrarch, mesarch, xerarch; Nutrient, water, carbon, nitrogen, cycles; Effect of human activities on these cycles.

Module:2	Biodiversity	6 hours
species; Ho	types, mega-biodiversity; Species interaction - Extit-spots; GM crops- Advantages and disadvantages; — Significance, Threats due to natural and anthropo	Terrestrial biodiversity and Aquatic
Module:3	Sustaining Natural Resources and Environmental Quality	7 hours
hazards- BF	ntal hazards — causes and solutions. Biological ha PA, PCB, Phthalates, Mercury, Nuclear hazards- Ris rtual water, blue revolution. Water quality managen	sk and evaluation of hazards. Wate
hazardous v	vaste – types and waste management methods.	
Module:4	Energy Resources	6 hours
Coal, Nucle	- Non renewable energy resources- Advantages and ar energy. Energy efficiency and renewable energy. an thermal energy, Wind and geothermal energy. Enevolution.	Solar energy, Hydroelectric
Module:5	Environmental Impact Assessment	6 hours
India (Envir	to environmental impact analysis. EIA guidelines, conmental Protection Act – Air, water, forest and wites. Public awareness. Environmental priorities in Ir	ld life). Impact assessment
Module:6	Human Population Change and Environment	6 hours
developmen	Human Population Change and Environment conmental problems; Consumerism and waste product at – Impact of population age structure – Women and ent. Sustaining human societies: Economics, environ	cts; Promotion of economic d child welfare, Women

Mode of evaluation: Internal Assessment (CA1, Quizzes, Digital Assignments) & FA1					
Recommended by Board of Studies	12.08.2017				
Approved by Academic Council	No. 46	Date	24.08.2017		

CHY1701	Engineering Chemistry (UC)	L T P J C
		3 0 2 0 4
Pre-requisite	Chemistry of 12 th standard or equivalent	Syllabus version
		1.1

- 1. To impart technological aspects of applied chemistry
- 2. To lay foundation for practical application of chemistry in engineering aspects

Expected Course Outcomes (CO): Students will be able to

- 1. **Recall** and **analyze** the issues related to impurities in water and their removal methods and **apply** recent methodologies in water treatment for domestic and industrial usage
- 2. **Evaluate** the causes of metallic corrosion and **apply** the methods for corrosion protection of metals
- 3. **Evaluate** the electrochemical energy storage systems such as lithium batteries, fuel cells and solar cells, and **design** for usage in electrical and electronic applications
- 4. **Assess** the quality of different fossil fuels and create an awareness to **develop** the alternative fuels
- 5. **Analyze** the properties of different polymers and distinguish the polymers which can be degraded and **demonstrate** their usefulness
- 6. **Apply** the theoretical aspects: (a) in **assessing** the water quality; (b) **understanding** the construction and working of electrochemical cells; (c) **analyzing** metals, alloys and soil using instrumental methods; (d) **evaluating** the viscosity and water absorbing properties of polymeric materials

Student Learning Outcomes involved: 1,2,14

Module:1 | Water Technology

5 hours

Characteristics of hard water - hardness, DO, TDS in water and their determination – numerical problems in hardness determination by EDTA; Modern techniques of water analysis for industrial use - Disadvantages of hard water in industries.

Module:2 | Water Treatment

8 hours

Water softening methods: - Lime-soda, Zeolite and ion exchange processes and their applications. Specifications of water for domestic use (ICMR and WHO); Unit processes involved in water treatment for municipal supply - Sedimentation with coagulant- Sand Filtration - chlorination; Domestic water purification - Candle filtration- activated carbon filtration; Disinfection methods-Ultrafiltration, UV treatment, Ozonolysis, Reverse Osmosis; Electro dialysis.

Module:3 Corrosion

6 hours

Dry and wet corrosion - detrimental effects to buildings, machines, devices & decorative art forms, emphasizing Differential aeration, Pitting, Galvanic and Stress corrosion cracking; Factors that enhance corrosion and choice of parameters to mitigate corrosion.

Module:4 | Corrosion Control

4 hours

Corrosion protection - cathodic protection - sacrificial anodic and impressed current protection methods; Advanced protective coatings: electroplating and electroless plating, PVD and CVD.

Alloying for corrosion protection – Basic concepts of Eutectic composition and Eutectic mixtures - Selected examples – Ferrous and non-ferrous alloys.

Module:5 | Electrochemical Energy Systems

6 hours

Brief introduction to conventional primary and secondary batteries; High energy electrochemical energy systems: Lithium batteries – Primary and secondary, its Chemistry, advantages and applications.

Fuel cells – Polymer membrane fuel cells, Solid-oxide fuel cells- working principles, advantages, applications.

Solar cells – Types – Importance of silicon single crystal, polycrystalline and amorphous silicon solar cells, dye sensitized solar cells - working principles, characteristics and applications.

Module:6 | Fuels and Combustion 8 hours Calorific value - Definition of LCV, HCV. Measurement of calorific value using bomb calorimeter and Boy's calorimeter including numerical problems. Controlled combustion of fuels - Air fuel ratio – minimum quantity of air by volume and by weight-Numerical problems-three way catalytic converter- selective catalytic reduction of NO_x; Knocking in IC engines-Octane and Cetane number - Antiknocking agents. **Module:7** | **Polymers** 6 hours Difference between thermoplastics and thermosetting plastics; Engineering application of plastics -ABS, PVC, PTFE and Bakelite; Compounding of plastics: moulding of plastics for Car parts, bottle caps (Injection moulding), Pipes, Hoses (Extrusion moulding), Mobile Phone Cases, Battery Trays, (Compression moulding), Fibre reinforced polymers, Composites (Transfer moulding), PET bottles (blow moulding); Conducting polymers- Polyacetylene- Mechanism of conduction – applications (polymers in sensors, self-cleaning windows) Module:8 2 hours **Contemporary issues:** Lecture by Industry Experts **Total Lecture hours:** 45 hours Text Book(s) 1. Sashi Chawla, A Text book of Engineering Chemistry, Dhanpat Rai Publishing Co., Pvt. Ltd., Educational and Technical Publishers, New Delhi, 3rd Edition, 2015. 2. O.G. Palanna, McGraw Hill Education (India) Private Limited, 9th Reprint, 2015. 3. B. Sivasankar, Engineering Chemistry 1st Edition, Mc Graw Hill Education (India), 2008 4. Course code	PROBLEM SOLVING AND PROGRAMMING	L	T	P	J	C
CSE1001		0	0	6	0	3
Pre-requisite	NIL	Sy	llabı	ıs v	ers	sion
					,	v1.0

- 1. To develop broad understanding of computers, programming languages and their generations
- 2. Introduce the essential skills for a logical thinking for problem solving
- **3.** To gain expertise in essential skills in programming for problem solving using computer

Expected Course Outcome:

- 1. Understand the working principle of a computer and identify the purpose of a computer programming language.
- 2. Learn various problem solving approaches and ability to identify an appropriate approach to solve the problem
- 3. Differentiate the programming Language constructs appropriately to solve any problem
- 4. Solve various engineering problems using different data structures
- 5. Able to modulate the given problem using structural approach of programming
- 6. Efficiently handle data using flat files to process and store data for the given problem

Student Learning Outcomes (SLO): 1, 12, 14

- 1. Having an ability to apply mathematics and science in engineering applications
- 12. Having adaptive thinking and adaptability
- 14. Having an ability to design and conduct experiments, as well as to analyze and interpret data

	List of Challenging Experiments (Indicative)		
1	Steps in Problem Solving Drawing flowchart using yEd tool/Raptor Tool	4 Hours	
2	Introduction to Python, Demo on IDE, Keywords, Identifiers, I/O Statements	4 Hours	
3	Simple Program to display Hello world in Python	4 Hours	
4	Operators and Expressions in Python	4 Hours	
5	Algorithmic Approach 1: Sequential	4 Hours	
6	Algorithmic Approach 2: Selection (if, elif, if else, nested if else)	4 Hours	
7	Algorithmic Approach 3: Iteration (while and for)	6 Hours	
8	Strings and its Operations	6 Hours	
9	Regular Expressions	6 Hours	
10	10 List and its operations		
11	11 Dictionaries: operations		
12	Tuples and its operations	6 Hours	
13	Set and its operations	6 Hours	
14	Functions, Recursions	6 Hours	
15	Sorting Techniques (Bubble/Selection/Insertion)	6 Hours	
16	Searching Techniques : Sequential Search and Binary Search	6 Hours	
17	Files and its Operations	6 Hours	
	Total hours:	90 hours

Approved by Academic Council	No. 38	Date	23-10-2015

CSE1002	PROBLEM SOLVING AND OBJECT ORIENTED PROGRAMMING		L	T	P	J	C
			0	0	6	0	3
Pre-requisite	Nil	Sy	lla	bu	s v	ers	ion
						V.	1.0

- 1. To emphasize the benefits of object oriented concepts.
- 2.To enable students to solve the real time applications using object oriented programming features
- 3.To improve the skills of a logical thinking and to solve the problems using any processing elements

Expected Course Outcome:

- 1. Demonstrate the basics of procedural programming and to represent the real world entities as programming constructs.
- 2.Enumerate object oriented concepts and translate real-world applications into graphical representations.
- 3.Demonstrate the usage of classes and objects of the real world entities in applications.
- 4.Discriminate the reusability and multiple interfaces with same functionality based features to solve complex computing problems.
- 5.Illustrate possible error-handling constructs for unanticipated states/inputs and to use generic programming constructs to accommodate different datatypes.
- 6. Validate the program against file inputs towards solving the problem..

Student Learning Outcomes (SLO): 1,9,17

- 1. Having an ability to apply mathematics and science in engineering applications.
- 9. Having problem solving ability- solving social issues and engineering problems.
- 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice.

List of Challenging Experiments (Indicative) 1. **Postman Problem** 10 hours A postman needs to walk down every street in his area in order to deliver the mail. Assume that the distances between the streets along the roads are given. The postman starts at the post office and returns back to the post office after delivering all the mails. Implement an algorithm to help the post man to walk minimum distance for the purpose. 2. **Budget Allocation for Marketing Campaign** 15 hours A mobile manufacturing company has got several marketing options such as Radio advertisement campaign, TV non peak hours campaign, City top paper network, Viral marketing campaign, Web advertising. From their previous experience, they have got a statistics about paybacks for each marketing option. Given the marketing budget (rupees in crores) for the current year and details of paybacks for each option, implement an algorithm to determine the amount that shall spent on each marketing option so that the company attains the maximum profit. 3. **Missionaries and Cannibals** 10 hours Three missionaries and three cannibals are on one side of a river, along with a boat that can hold one or two people. Implement an algorithm to find a way to get everyone to the other side of the river, without ever leaving a group of missionaries in one place outnumbered by the cannibals in that place. 4. **Register Allocation Problem** 15 hours A register is a component of a computer processor that can hold any type of

	data and can be accessed faster. As registers are faster to access, it is					
	desirable to use them to the maximum so that the code execution is faster.					
	For each code submitted to the processor, a register interference graph (RIG)					
	is constructed. In a RIG, a node represents a temporary variable and an edge					
	is added between two nodes (variables) t1 and t2 if they are live					
	simultaneously at some point in the program. During register allocation, two					
	temporaries can be allocated to the same register if there is no edge					
	connecting them. Given a RIG representing the dependencies between					
	variables in a code, implement an algorithm to determine the number of					
5.	registers required to store the variables and speed up the code execution	15 hours				
5.	Selective Job Scheduling Problem A server is a machine that waits for requests from other machines and	15 nours				
	responds to them. The purpose of a server is to share hardware and software					
	resources among clients. All the clients submit the jobs to the server for					
	execution and the server may get multiple requests at a time. In such a					
	situation, the server schedule the jobs submitted to it based on some criteria					
	and logic. Each job contains two values namely time and memory required					
	for execution. Assume that there are two servers that schedules jobs based					
	on time and memory. The servers are named as Time Schedule Server and					
	memory Schedule Server respectively. Design a OOP model and implement					
	the time Schedule Server and memory Schedule Server. The Time Schedule					
	Server arranges jobs based on time required for execution in ascending order					
	whereas memory Schedule Server arranges jobs based on memory required					
	for execution in ascending order					
6.	Fragment Assembly in DNA Sequencing	15 hours				
	DNA, or deoxyribonucleic acid, is the hereditary material in humans and					
	almost all other organisms. The information in DNA is stored as a code					
	made up of four chemical bases: adenine (A), guanine (G), cytosine (C), and					
	thymine (T). In DNA sequencing, each DNA is sheared into millions of					
	small fragments (reads) which assemble to form a single genomic sequence					
	(superstring). Each read is a small string. In such a fragment assembly, given					
	a set of reads, the objective is to determine the shortest superstring that					
	contains all the reads. For example, given a set of strings, 000, 001, 010,					
	011, 100, 101, 110, 111 the shortest superstring is 0001110100. Given a set					
	of reads, implement an algorithm to find the shortest superstring that					
	contains all the given reads.	101				
7.	House Wiring	10 hours				
	An electrician is wiring a house which has many rooms. Each room has					
	many power points in different locations. Given a set of power points and					
	the distances between them, implement an algorithm to find the minimum					
	cable required.	90 hours

Mode of Evaluation: Internship Report, Presentation and Project Review

CSE3999	Technical Answers for Real World Problems (TARP)) L T P J C
		1 0 0 8 3
Pre-requisite	PHY1999 and 115 Credits Earned	Syllabus version
		1.0

- To help students to identify the need for developing newer technologies for industrial / societal needs
- To train students to propose and implement relevant technology for the development of the prototypes / products
- To make the students learn to the use the methodologies available for analysing the developed prototypes / products

Expected Course Outcome:

At the end of the course, the student will be able to

- 1. Identify real life problems related to society
- 2. Apply appropriate technology(ies) to address the identified problems using engineering principles and arrive at innovative solutions

Student Learning Outcomes (SLO): 9, 18

[9] Having problem-solving ability solving social issues and engineering problems

[18] Having critical thinking and innovative skills

Module:1 15 hours

- 1. Identification of real life problems
 - 2. Field visits can be arranged by the faculty concerned
 - 3. 6-10 students can form a team (within the same / different discipline)
 - 4. Minimum of eight hours on self-managed team activity
 - 5. Appropriate scientific methodologies to be utilized to solve the identified issue
 - 6. Solution should be in the form of fabrication/coding/modeling/product design/process design/relevant scientific methodology(ies)
 - 7. Consolidated report to be submitted for assessment
 - 8. Participation, involvement and contribution in group discussions during the contact hours will be used as the modalities for the continuous assessment of the theory component
 - 9. Project outcome to be evaluated in terms of technical, economical, social, environmental, political and demographic feasibility
 - 10. Contribution of each group member to be assessed
 - 11. The project component to have three reviews with the weightage of 20:30:50

Mode of Evaluation: (No FAT) Continuous Assessment the project done – Mark weightage of					
20:30:50 – project report to be submitted, presentation and project reviews

Pre-requisite		Syllabus version
		1.00

Student Learning Outcomes (SLO): 2

[2] Having a clear understanding of the subject related concepts and of contemporary issues

Digital Logic and Microprocessor

Simplification of Boolean functions using K-Map – Combinational logic: Adder, subtractor, encoder, decoder, multiplexer, de-multiplexer – Sequential Logic: Flip flops- 8086 Microprocessor: instructions – peripherals: 8255, 8254, 8257.

Computer Architecture and Organization

Instructions - Instruction types- Instruction Formats - Addressing Modes- Pipelining- Data Representation - Memory Hierarchy- Cache memory-Virtual Memory- I/O Fundamentals- I/O Techniques - Direct Memory Access - Interrupts-RAID architecture

Programming, Data Structures and Algorithms

Programming in C; Algorithm Analysis – Iterative and Recursive Algorithms; ADT - Stack and its Applications - Queue and its Applications; Data Structures – Arrays and Linked Lists; Algorithms - Sorting – Searching; Trees – BST, AVL; Graphs – BFS, DFS, Dijkstra's Shortest Path Algorithm.

Theory of Computation

Deterministic Finite Automata, Non deterministic Finite Automata, Regular Expressions, Context Free Grammar, Push down Automata and Context Free Languages, Turing Machines.

Web Technologies

Web Architecture- JavaScript – objects String, date, Array, Regular Expressions, DHTML-HTML DOM Events; Web Server – HTTP- Request/Response model-RESTful methods- State Management – Cookies, Sessions – AJAX.

Operating Systems

Processes, Threads, Inter-process communication, CPU scheduling, Concurrency and synchronization, Deadlocks, Memory management and Virtual memory & File systems.

Database Management System

DBMS, Schema, catalog, metadata, data independence, pre-compiler; Users-naïve, sophisticated, casual ;ER Model- Entity, attributes, structural constraints; Relational Model-Constraints, Relational Algebra operations; SQL- DDL, DML, TCL, DCL commands, basic queries and Top N queries; Normalization-properties, 1NF, 2NF, 3NF, BCNF; Indexing-different types, Hash Vs B-tree Index; Transaction-problems, Concurrency Control-techniques, Recovery-methods.

Data Communication and Computer Networks

Circuit Switching, Packet Switching, Frame Relay, Cell Switching, ATM, OSI Reference model, TCP\IP, Network topologies, LAN Technologies, Error detection and correction techniques, Internet protocols, IPv4/IPv6, Routing algorithms, TCP and UDP, Sockets, Congestion control, Application Layer Protocols, Network Security: Basics of public and private key cryptosystems-Digital Signatures and Hash codes, Transport layer security, VPN, Firewalls.

CSE4099	Capstone Project	L T P J C
		0 0 0 0 20
Pre-requisite	As per the academic regulations	Syllabus version
		v. 1.0

To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field.

Expected Course Outcome:

At the end of the course the student will be able to

- 1. Formulate specific problem statements for ill-defined real life problems with reasonable assumptions and constraints.
- 2. Perform literature search and / or patent search in the area of interest.
- 3. Conduct experiments / Design and Analysis / solution iterations and document the results.
- 4. Perform error analysis / benchmarking / costing
- 5. Synthesise the results and arrive at scientific conclusions / products / solution
- 6. Document the results in the form of technical report / presentation

Student Learning Outcomes (SLO): 5, 6, 20

Contents

- 1. Capstone Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities.
- 2. Project can be for one or two semesters based on the completion of required number of credits as per the academic regulations.
- 3. Can be individual work or a group project, with a maximum of 3 students.
- 4. In case of group projects, the individual project report of each student should specify the individual's contribution to the group project.
- 5. Carried out inside or outside the university, in any relevant industry or research institution.
- 6. Publications in the peer reviewed journals / International Conferences will be an added advantage

Mode of Evaluation: Periodic reviews, Presentation, Final oral viva, Poster submission

MAT2001	Statistics for Engineers	L	T	P	J	C
		3	0	2	0	4
Prerequisites	MAT1011 – Calculus for	Sylla	bus V	⁷ ersio	n:	1.0
	Engineers					

- 1. To provide students with a framework that will help them choose the appropriate descriptive methods in various data analysis situations.
- 2. To analyse distributions and relationship of real-time data.
- 3. To apply estimation and testing methods to make inference and modelling techniques for decision making.

Expected Course Outcome:

At the end of the course the student should be able to:

- 1. Compute and interpret descriptive statistics using numerical and graphical techniques.
- 2. Understand the basic concepts of random variables and find an appropriate distribution for analysing data specific to an experiment.
- 3. Apply statistical methods like correlation, regression analysis in analysing, interpreting experimental data.
- 4. Make appropriate decisions using statistical inference that is the central to experimental research.
- 5. Use statistical methodology and tools in reliability engineering problems.
- 6. demonstrate R programming for statistical data

Student Learning Outcome (SLO): 1, 2, 7, 9, 14

- [1] Having an ability to apply mathematics and science in engineering applications.
- [2] Having a clear understanding of the subject related concepts and of contemporary issues.
- [7] Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning).
- [9] Having problem solving ability- solving social issues and engineering problems.
- [14] Having an ability to design and conduct experiments, as well as to analyse and interpret data.

Module: 1	Introduction to Statistics	6 hours
Introduction to statis	stics and data analysis-Measures of	central tendency -Measures of
variability-[Moments-	-Skewness-Kurtosis (Concepts only)].	

8 hours

Random variables Introduction -random variables-Probability mass Function, distribution and density functions - joint Probability distribution and joint density functions- Marginal, conditional distribution and density functions- Mathematical expectation, and its properties Covariance, moment

generating function – characteristic function.

Module: 2

Correlation and regression Correlation and Regression - Rank Correlation- Partial and Multiple correlation- Multiple regression.

Probability Distributions 7 hours Module: 4 Binomial and Poisson distributions – Normal distribution – Gamma distribution – Exponential distribution – Weibull distribution.

Module: 5 **Hypothesis Testing I**

Testing of hypothesis – Introduction-Types of errors, critical region, procedure of testing hypothesis-Large sample tests- Z test for Single Proportion, Difference of Proportion, mean and difference of means.

Module: 6 **Hypothesis Testing II** 9 hours

Small sample tests- Student's t-test, F-test- chi-square test- goodness of fit - independence of attributes- Design of Experiments - Analysis of variance - one and two way classifications -CRD-RBD- LSD.

Module: 7 Reliability

Basic concepts- Hazard function-Reliabilities of series and parallel systems- System Reliability - Maintainability-Preventive and repair maintenance- Availability.

Pre-requisite None	Syllabus version
	V.2.1

To enable the students to understand the basics of the latest advancements in Physics viz., Quantum Mechanics, Nanotechnology, Lasers, Electro Magnetic Theory and Fiber Optics.

Expected Course Outcome: Students will be able to

- 1. Comprehend the dual nature of radiation and matter.
- 2. Compute Schrodinger's equations to solve finite and infinite potential problems.
- 3. Analyze quantum ideas at the nanoscale.
- 4. Apply quantum ideas for understanding the operation and working principle of optoelectronic devices.
- 5. Recall the Maxwell's equations in differential and integral form.
- 6. Design the various types of optical fibers for different Engineering applications.
- 7. Explain concept of Lorentz Transformation for Engineering applications.
- 8. Demonstrate the quantum mechanical ideas

Student Learning Outcomes (SLO): 2, 4, 5, 9

- 2. Having a clear understanding of the subject related concepts and of contemporary issues
- 4. Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking

skills which cannot be codified)

- 5. Having design thinking capability
- 9. Having problem solving ability- solving social issues and engineering problems

Module:1 Introduction to Modern Physics

6 hours

Planck's concept (hypothesis), Compton Effect, Particle properties of wave: Matter Waves, Davisson Germer Experiment, Heisenberg Uncertainty Principle, Wave function, and Schrodinger equation (time dependent & independent).

Module:2 | Applications of Quantum Physics

5 hours

Particle in a 1-D box (Eigen Value and Eigen Function), 3-D Analysis (Qualitative), Tunneling Effect (Qualitative) (AB 205), Scanning Tunneling Microscope (STM).

Module:3 | Nanophysics

5 hours

Introduction to Nano-materials, Moore's law, Properties of Nano-materials, Quantum confinement, Quantum well, wire & dot, Carbon Nano-tubes (CNT), Applications of nanotechnology in industry.

Module:4 | Laser Principles and Engineering Application

6 hours

Laser Characteristics, Spatial and Temporal Coherence, Einstein Coefficient & its significance, Population inversion, Two, three & four level systems, Pumping schemes, Threshold gain coefficient, Components of laser, Nd-YAG, He-Ne, CO2 and Dye laser and their engineering applications.

Module:5 | Electromagnetic Theory and its application

6 hours

Physics of Divergence, Gradient and Curl, Qualitative understanding of surface and volume integral, Maxwell Equations (Qualitative), Wave Equation (Derivation), EM Waves, Phase velocity, Group velocity, Group index , Wave guide (Qualitative)

Module:6 Propagation of EM waves in Optical fibers and Optoelectronic Devices

10 hours

Light propagation through fibers, Acceptance angle, Numerical Aperture, Types of fibers - step

index, graded index, single mode & multimode, Attenuation, Dispersion-intermodal and intramodal. Sources-LED & Laser Diode, Detectors-Photodetectors- PN & PIN - Applications of fiber optics in communication- Endoscopy.

Module:7 | Special Theory of Relativity

5 hours

Frame of reference, Galilean relativity, Postulate of special theory of relativity, Simultaneity, length contraction and time dilation.

Module:8 | Contemporary issues:

2 hours

Lecture by Industry Experts

Total Lecture hours:

45 hours

PHY1999	Introduction to Innovative Projects	L T P J C
		1 0 0 4 2
Pre-requisite	None	Syllabus version
		1.0

This course is offered to the students in the 1St Year of B.Tech. in order to orient them towards independent, systemic thinking and be innovative.

- 1. To make students confident enough to handle the day to day issues.
- 2. To develop the "Thinking Skill" of the students, especially Creative Thinking Skills
- 3. To train the students to be innovative in all their activities
- 4. To prepare a project report on a socially relevant theme as a solution to the existing issues

Expected Course Outcome: Students will be able to

- 1. Comprehend the various types of thinking skills.
- 2. Explain the innovative and creative ideas.
- 3. Analyze a suitable solution for socially relevant issues

Student Learning Outcomes (SLO): 2,3,9,17,18

- 2. Having a clear understanding of the subject related concepts and of contemporary issues
- 3. Having an ability to be socially intelligent with good SIQ (Social Intelligence Quotient) and EQ (Emotional Quotient)
- 9. Having problem solving ability- solving social issues and engineering problems
- 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering

practice

18. Having critical thinking and innovative skills

Module:1 A | **Self Confidence**

1 hour

Understanding self – Johari Window –SWOT Analysis – Self Esteem – Being a contributor – Case

Study

Project : Exploring self, understanding surrounding, thinking about how s(he) can be a contributor

for the society, Creating a big picture of being an innovator – writing a 1000 words imaginary autobiography of self – Topic "Mr X – the great innovator of 2015" and upload. (4 non- contact hours)

Module:1 B | Thinking Skill

1 hour

Thinking and Behaviour – Types of thinking– Concrete – Abstract, Convergent, Divergent, Creative,

Analytical, Sequential and Holistic thinking – Chunking Triangle – Context Grid – Examples – Case Study.

Project : Meeting at least 50 people belonging to various strata of life and talk to them / make field visits to identify a min of 100 society related issues, problems for which they need solutions and categories them and upload along with details of people met and lessons learnt. (4 noncontact hours)

Module:1 C | Lateral Thinking Skill

1 hour

 $Blooms\ Taxonomy-HOTS-Out of\ the\ box\ thinking-deBono\ lateral\ thinking\ model-Examples$

Project: Last weeks - incomplete portion to be done and uploaded

Module:2 A | Creativity

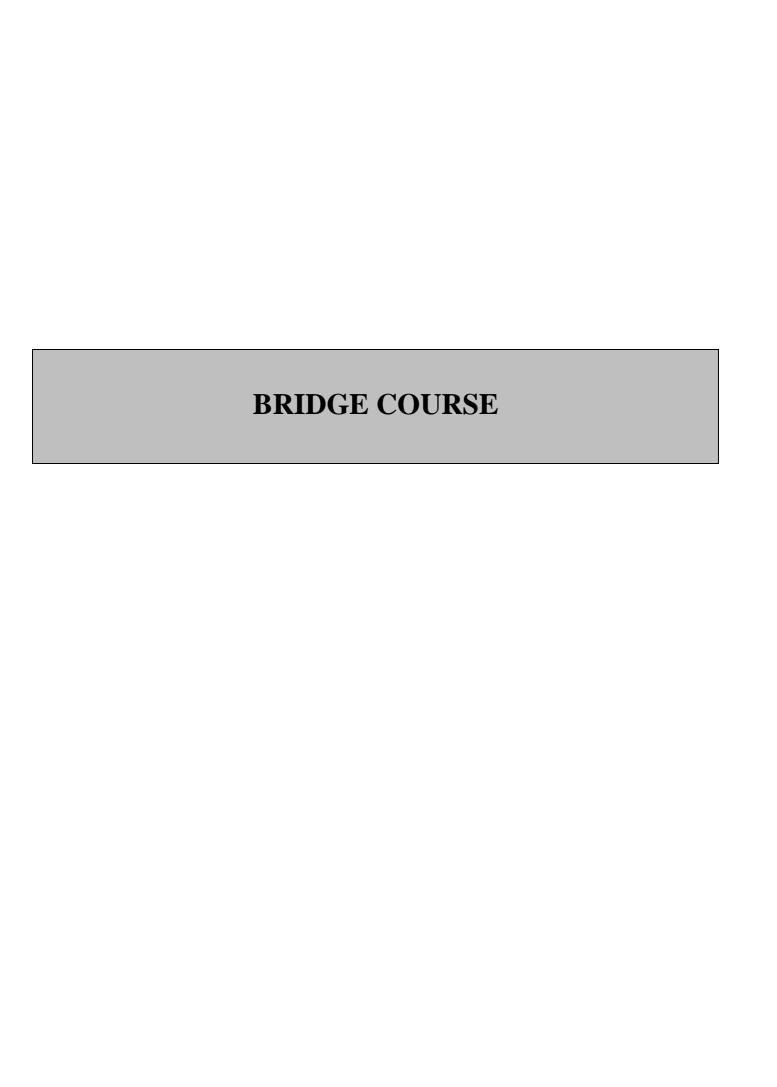

1 hour

Creativity Models – Walla – Barrons – Koberg & Begnall – Examples

Project : Selecting 5 out of 100 issues identified for future work. Criteria based approach for prioritisation, use of statistical tools & upload . (4 non- contact hours)

Module:2 B B	rainstorming		1 hour
25 brainstormin	g techniques and examples		
	storm and come out with as many solutions as oad. (4 non- contact hours)	s possible for t	he top 5 issues

ENG1002	Effective English]	L 7	Ρ	J	C
		() (4	0	2
Pre-requisite	Not cleared English Proficiency Test (EPT)	Syllabus version		sion		
					V	.2.0

- 1. To enable students develop basic proficiency in Language Skills
- 2. To help students overcome communication barriers
- 3. To facilitate students communicate effectively in academic and social contexts

Expected Course Outcome:

- 1. Speak fluently in academic and social contexts
- 2. Listen for global and specific comprehension to improve study skills like note taking, summarizing, etc
- 3. Read and comprehend technical and general texts
- 4. Write grammatically correct creative and descriptive sentences and paragraphs in specific contexts
- 5. Enact on social contexts with a message, and communicate clearly and effectively in formal and informal contexts

Student Learning Outcomes (SLO): | 16, 18

- 16. Good working knowledge of communicating in English
- **18.** Critical thinking and innovative skills

Mode of Evaluation: Online Quizzes, Presentation, Role play, Group Discussions, Assignments, Mini project.

List	of Challenging Experiments (Indicative)	
1.	Speaking: Introduce yourself using Temperament Sorter	8 hours
2.	Reading: Loud Reading with focus on pronunciation	4 hours
3.	Writing: Descriptive Writing – Process	6 hours
	Compare & Contrast – Product description	
4.	Speaking: Just a Minute / Activities through VIT Community Radio	6 hours
5.	Writing: Travelogue Writing - 25+ FAQs (Wh-questions) on a place they	10 hours
	have visited – Pair work	
6.	Speaking: Discuss facts and opinions using question tags	6 hours
7.	Writing: Formal Letter Writing focusing on Content	6 hours
8.	Vocabulary: Correct spelling errors	4 hours
9.	Speaking: Asking for and giving Directions/Instructions	6 hours
10.	Writing: Story writing using prompts/pictures	4 hours
	Total Laboratory Hours	60 hours
