

## SCHOOL OF MECHANICAL ENGINEERING

# **M.Tech Mechatronics**

Curriculum & Syllabai (2022-2023 batch onwards)

#### VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

• Transforming life through excellence in education and research.

#### **MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY**

- **World class Education**: Excellence in education, grounded in ethics and critical thinking, for improvement of life.
- **Cutting edge Research**: An innovation ecosystem to extend knowledge and solve critical problems.
- **Impactful People**: Happy, accountable, caring and effective workforce and students.
- **Rewarding Co-creations**: Active collaboration with national & international industries & universities for productivity and economic development.
- **Service to Society**: Service to the region and world through knowledge and compassion.

#### VISION STATEMENT OF THE SCHOOL OF MECHANICAL ENGINEERING

• To be a leader in imparting world class education in Mechanical Engineering, leading to nurturing of scientists and technologists of highest caliber who would engage in sustainable development of the globe.

#### **MISSION STATEMENT OF THE SCHOOL OF MECHANICAL ENGINEERING**

- To create and maintain an environment fostering excellence in instruction & learning, Research and Innovation in Mechanical Engineering and Allied Disciplines.
- To equip students with the required knowledge and skills to engage seamlessly in higher educational and employment sectors ensuring that societal demands are met.

### **M. Tech Mechatronics**

### **PROGRAMME OUTCOMES (POs)**

**PO\_01:** Having an ability to apply mathematics and science in engineering applications.

**PO\_02:** Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment.

**PO\_03:** Having an ability to design and conduct experiments, as well as to analyse and interpret data, and synthesis of information.

**PO\_04:** Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice.

**PO\_05:** Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems.

**PO\_06:** Having adaptive thinking and adaptability in relation to environmental context and sustainable development.

**PO\_07:** Having a clear understanding of professional and ethical responsibility.

**PO\_08:** Having a good cognitive load management skills related to project management and finance.

#### **M. Tech Mechatronics**

### **PROGRAMME SPECIFIC OUTCOMES (PSOs)**

On completion of M. Tech. (Mechatronics) programme, graduates will be able to

- **PSO\_1:** Compute, Design, Simulate & analyse various Automotive engineering systems taken into account the social, economic and environmental implications for the current and future mobility.
- **PSO\_2:** Practice a multidisciplinary approach to solve real-world automotive problems.
- **PSO\_3:** Independently carry out research / investigation to solve practical problems and write / present a substantial technical report/document.

### **M. Tech Mechatronics**

### **PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)**

- 1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
- 2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
- 3. Graduates will function in their profession with social awareness and responsibility.
- 4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
- 5. Graduates will be successful in pursuing higher studies in engineering or management.
- 6. Graduates will pursue career paths in teaching or research.

#### Agenda Item 67/14

To consider and approve the revised programme credit structure, curriculum and course contents of Master of Technology in Mechatronics

**ANNEXURE – 18** 

#### Master of Technology in Mechatronics School of Mechanical Engineering

			1.	0	
Course Objective					
The Objectives of t					
	the fundamental concepts of electro-mechanica	l and	l flui	d po	wer
	and pneumatics) systems				
	e the students with the actuators in the area of hydi chanical systems and associated equipment's used for			eumai	ics,
	knowledge of several drives for the different actu			ene	arav
	s, etc. and they come up with energy saving sol				
systems	, etc. and they come up with chergy caving co		,	maao	inai
2	and apply fundamental concepts to the modeling, and	alvsis.	and	contro	ol of
	C motors, stepper motors, brushless DC motors, soler				
	atic actuators.	,			
•					
Course Outcome	:				
The student should	l be able to:				
1. Identify key	concepts, architecture and principles concerning	the h	ydra	ulics a	and
pneumatic			-		
	ey concepts and principles concerning modeling, ana			contro	l of
	motors, stepper motors, brushless dc motors, and sole		S.		
	ethods of control algorithms, fault detection and diagn				
	set of potential mechanisms and control solutions for				
	reness about actuators, drives and control elements for				IS
	actuators and its associated drivers for several working				
	nowledge about the architecture and working prin-	ciples	of	the m	iost
	ectrical motor types				
o. Choose and	d use hydraulic, pneumatic, electrical actuators and dri	ves			
	ulic Actuators			<u>7 ho</u>	
	sification of actuators, Hydraulic pumps and supply				
	actuator – Types - Single acting, Double acting special				
packs –accumulate	vic, mounting details, cushioning mechanism, Rotar	y act	ualor	s, po	wer
packs –accumulate	JS.				
Module:2 Pneur	natic Actuators			7 ho	ure
	teristics and applications, Air generation, treatmen	te an	d dia		
	Iter, regulator, lubricator, Pneumatic cylinders, Pneun				
	of Pneumatic Actuators.		notoi	3, Ou	UNC
opood Rogalation					
Module:3 Contro	ol and Regulation Elements			7 ho	urs
	ation Elements – Basics of Direction control valves,	flow	and		
	sic structure of pneumatic and hydraulic systems – Ele			•	
	stems and controls.				
Module:4 Electr	ical DC actuators			6 ho	urs
	g principle, characteristics, classification, Speed con	trol te	chni		
	ns - Speed, direction and position control using H-				
mode.		5			
Module:5 Electr	ical AC actuators			6 ho	urs

AC Motor- Working principle, Speed torque characteristics, Speed control and braking, Single and three phases DC drives – Speed control of three phase induction motor – chopper drives – Need for V/ F drives – Energy saving AC drives Applications.

Module:6	Other Electrical actuators	5 hours
Stepper Mo	tor - Drive circuits for speed and position control - Servo m	notors – Linear
motors – Re	elays- Power convertors	

#### Module:7 Smart Materials Actuators

5 hours Smart materials and their application for sensing and actuation, Piezoelectric actuator -Linear actuators Hybrid actuators - Applications, shape memory alloys actuator, magnetostrictive actuators, Electrostrictive actuators, Electro - and magnetorheological fluid actuators – Case study.

Module:8	Contemporary Issues

Pre-requisite	NIL	Sylla	bus	vers	sion
-			1.0	)	
Course Objective	es :				
	the continuous time control system design wit	h rea	listic	sys	stem
	a digital control system for a continuous system model.				
	e knowledge of state variable models and fundamen		ions	of	state
feedback o	•				
4. To provide	e understanding of different control algorithms consid	ering r	nonlir	eari	ities,
uncertainit	ies and robustness.	_			
Course Outcome	:				
On the completior	of this course the student will be able to:				
	ntinuous time control system design with realistic syster	n spec	ificat	ions	
	f discrete system response using Z-Transform.				
	ollability/ observability of a system.				
	igital Controller with realistic system specifications.				
0	state feedback control law for a time domain specificat	tion.			
	d control system design for for non linear systems.				
	nd the basics of optimal control, robust control, predicti	ve con			
	ical Control Systems				ours
	ck systems and design of PID Controllers - Design		trolle	rs u	ising
Root Loci and Boo	le plots – Lead, Lag, Lag-lead and parallel compensate	ors.			
Module:2 Digita	I Control Systems				ours
	ding – Z-transform - Correlation between time respons	e and I	root I	ocat	tions
in S plane and Z p	lane – Direct design in Z and W plane.				
	I Controller Design			<u>6 h</u>	ours
State space desig	<u>n – Design via pole placement - digital PID controller de</u>	esign			
Module:4 State					ours
	esentations – conversion from transfer function mo	del –	solvir	ng t	ime-
invariant state equ	iations – Controllability – Observability.				
	ol System Design in State Space				ours
	ontrollers in state space - design of servo and regulator	y conti	roller	s – s	state
observers.					
	near and Predictive Control				ours
	non-linear system, phase plane method - Liapunov's				
	criterion - Model reference and predictive control	syste	ms -	- st	ate
estimators – Kalm	an algorithm.				
-					
	visory Level Systems				ours
	daptive control, optimal control, robust control, m	ulti-var	iable	CO	ntrol
systems.					
Case studies: Cor	trol of motion and other dynamics of mechatronics syst	tems

	1.0								
Course Objective									
	emphasis on the characteristics and hardware archited real time operating systems.	ectur	e of e	mbed	bec				
	essential knowledge on various steps involved in exe	outin	a a hi	aher le	اصرد				
	and development of required software.	Juin	gan	grier ic	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,				
	e the essential knowledge in the operating sys	stem	s an	d des	sian				
	gies for embedded system development.				Ũ				
Course Outcome									
	of this course the student will be able to:								
	the characteristics and concepts of embedded system	n.							
	d the architecture of hardware embedded system								
	e bus protocols involved in interfacing with memory blo	CKS.							
	d the steps of embedded system programming. The concepts of RTOS with general purpose OS.								
	dware components/architecture for embedded system	appl	icatior	าร.					
	omponent or a product applying all the relevant standa								
0	in practical case studies.								
	luction to Embedded Systems			3 ho					
	and applications of Embedded System - Concept of F	Real	time \$	Systen	าร -				
Embedded Systen	n Design - Design Process - Quality Attributes.								
Modulo:2 Embo	dded System Architecture			7 ho					
	chitecture - CISC and RISC instruction set architecture	- B	asic F						
	ontroller Architecture - DSP Processors – Harvard Arc								
	ure - I/0 Sub-system – Coprocessors and Hardw								
Processor Perform	nance Enhancement								
	ning Embedded Computing Platform			7 ho					
Bus Protocols – B	us Organization - Memory Devices and their Characte //, Flash Memory, DRAM - I/O Devices – Component Ir	ristic	s –RA	AM, RC	JM,				
and I/O device Inte		nena	acing -	- wen	ory				
	Shading								
Module:4 Progr	amming Embedded Systems			7 ho	urs				
	- Design Patterns for Embedded Systems - Program	nmin	g Lar	nguage	- 2¢				
	e Characteristics - Object Oriented Programming -								
Languages - Com	piling, Assembling, Linking, Debugging - Program Valio	latio	n and	Testin	g.				
Module:5 Opera				7 ho					
	an Operating System - Kernel Features - Real-time I Intext Switching –Scheduling - Inter-process Commu								
Memory Manager	<b>o o</b> 1	nicai	1011 -	Real-l	me				
Module:6 Embe	dded System Development			7 ho	urs				
	gies – Requirement Analysis and Use case Modeling	- S	tatic N						
	Structuring - Dynamic Modeling - Architectural D								
Software Partition	ning - Hardware-software Integration - Fault-tolera								
Reliability Evaluati	on Techniques

application in industry         Course Outcome         On completion of this course the students will be able to         1. Understand the fundamental principles and analytical modeling of fluid powe components and its symbols, circuits, and systems.         2. Acquire knowledge of the applications of fluid power in various engineering fields.         3. Study the benefits and limitations of fluid power compared with other power transmission technologies and Interface PLC with hydraulic and pneumatic systems         4. Demonstrate the production of compressed air and its distribution.         5. Understand about hydraulics filters and sealers, types of filter elements,- construction and working of filter in hydraulic unit         6. Understand components of hydraulic systems and its advantages         7. Design and analyze the pneumatic system and its advantages in industr applications.         1. Single acting and double acting cylinder using DCV         2. Automatic reciprocation of double acting cylinder         3. Controlling the hydraulic rotary actuator using electrical push button switch using met out circuit         4. Controlling the double acting hydraulic cylinder using electrical push button switt manually         5. Or gate & AND gate operation using single acting cylinder.         6. Simulation of basic pneumatic and hydraulic circuits.         7. Simulation of Electro-Hydraulic systems.         9. Simulation of PLC based electro pneumatic sequencing circuits	Cour	se Code	Course Title	L	Т	Ρ	С		
Course Objectives         The Objectives of the course are to:         1. Provide comprehensive introduction to fluid power system design including be hydraulics and pneumatics.         2. Acquire the knowledge on the fundamental elements of fluid power and properties fluid,         3. Understand fluid power and differentiate hydraulic and pneumatic systems for the application in industry         Course Outcome         On completion of this course the students will be able to         1. Understand the fundamental principles and analytical modeling of fluid pow components and its symbols, circuits, and systems.         2. Acquire knowledge of the applications of fluid power compared with other pow transmission technologies and Interface PLC with hydraulic and pneumatic systems         4. Demonstrate the production of compressed air and its distribution.         5. Understand about hydraulics filters and sealers, types of filter elements,- construction and working of filter in hydraulic usit         6. Understand components of hydraulic systems and its advantages         7. Design and analyze the pneumatic system and its advantages in industr applications.         1. Single acting and double acting cylinder using DCV         2. Automatic reciprocation of double acting cylinder using electrical push button switch using met out circuit         4. Controlling the double acting hydraulic cylinder using electrical push button switch using met out circuit         5. Or gate & AND gate operation using single acting cylinder.         6. Simulation of Electr	MMH	IA614P		0	0	2	1		
Course Objectives         The Objectives of the course are to:       1. Provide comprehensive introduction to fluid power system design including be hydraulics and pneumatics.         2.
