

SCHOOL OF ELECTRICAL ENGINEERING

B. Tech Electrical and Electronics Engineering

(B.Tech EEE)

Curriculum (2017 Admitted)

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development. **Service to Society**: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF ELECTRICAL ENGINEERING

To offer an education in electrical engineering that provides strong fundamental knowledge, skills for employability, cross-disciplinary research and creates leaders who provide technological solutions to societal and industry problems.

MISSION STATEMENT OF THE SCHOOL OF ELECTRICAL ENGINEERING

- ▶ Provide personalized experiential learning in industry sponsored labs to prepare students in electrical engineering with strong critical thinking and employability skills.
- ▶ Foster design thinking, creativity and cross-disciplinary research with highly qualified faculty to create innovators and entrepreneurs in the broad area of electrical engineering.
- ▶ Collaborate with national and international partners to provide innovative solutions to societal and industry challenges.

B. Tech Electrical and Electronics Engineering

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

The school of Electrical Engineering has established and sustained a well-defined set of educational objectives and preferred program outcomes. Educational objectives of the program satisfy to the requirements of the stakeholders such as students, parents, employers, alumni, faculty etc. The Program Educational Objectives (PEOs) are as follows.

- **PEO-1:** Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems in electrical engineering and allied disciplines.
- **PEO-2:** Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
- **PEO-3:** Graduates will function in their profession with social awareness and responsibility.
- **PEO-4:** Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
- **PEO-5:** Graduates will be successful in pursuing higher studies leading to careers in engineering, management, teaching, and research.

B. Tech Electrical and Electronics Engineering

PROGRAMME OUTCOMES (POs)

- 1) Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2) **Problem Analysis:** Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- 3) **Design / Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4) Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **5) Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- **6) The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7) Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **8) Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9) Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **10)** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11) Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **12)** Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

On completion of B. Tech. (Electrical and Electronics Engineering) programme, graduates will be able to

- **PSO-1:** Design electrical and electronic systems using extensive knowledge of science and engineering.
- **PSO-2:** Analyze power electronic circuits and power systems considering technical, economic and environmental constraints.
- **PSO-3:** Apply modern intelligent computational tools to the solution of electrical engineering problems and engage in lifelong learning to adapt to technological advancements.

CHY1701	Engineering Chemistry	
		3 0 2 0 4
Pre-requisite	Chemistry of 12 th standard or equivalent	Syllabus version
Anti-requisite	Nil	v.1.1
Course Objectiv		
	t technological aspects of applied chemistry	
	undation for practical application of chemistry in engineering	aspects
Expected Cours	se Outcomes (CO): Students will be able to	
apply rec	d analyze the issues related to impurities in water and their re ent methodologies in water treatment for domestic and industral aluate the causes of metallic corrosion and apply the me	ial usage
	nof metals	mods for corrosion
3. Evaluate and solar	the electrochemical energy storage systems such as lithium cells, and design for usage in electrical and electronic applications.	tions
alternativ		-
	the properties of different polymers and distinguish the poly and demonstrate their usefulness	mers which can be
construct using ins	e theoretical aspects: (a) in assessing the water quality; (b ion and working of electrochemical cells; (c) analyzing metrumental methods; (d) evaluating the viscosity and water absoc materials	tals, alloys and soil
Module:1 Wa		5 hours
Characteristics of problems in hard	hard water - hardness, DO, TDS in water and their determness determination by EDTA; Modern techniques of water and es of hard water in industries.	
Module:2 Wa		8 hours
Specifications of treatment for mun Domestic water pultrafiltration, UV	nethods: - Lime-soda, Zeolite and ion exchange processes and water for domestic use (ICMR and WHO); Unit processes icipal supply - Sedimentation with coagulant- Sand Filtration purification — Candle filtration- activated carbon filtration; Div treatment, Ozonolysis, Reverse Osmosis; Electro dialysis.	s involved in water - chlorination; sinfection methods-
	rrosion	6 hours
emphasizing Diff	osion - detrimental effects to buildings, machines, devices & derential aeration, Pitting, Galvanic and Stress corrosion cran and choice of parameters to mitigate corrosion.	
Module:4 Con	rrosion Control	4 hours
	ion - cathodic protection – sacrificial anodic and impressed	
-	ed protective coatings: electroplating and electroless plating, P	

6 hours

Selected examples – Ferrous and non-ferrous alloys.

Module:5 | Electrochemical Energy Systems

Brief introduction to conventional primary and secondary batteries; High energy electrochemical energy systems: Lithium batteries – Primary and secondary, its Chemistry, advantages and applications.

Fuel cells – Polymer membrane fuel cells, Solid-oxide fuel cells- working principles, advantages, applications.

Solar cells – Types – Importance of silicon single crystal, polycrystalline and amorphous silicon solar cells, dye sensitized solar cells - working principles, characteristics and applications.

Module:6 | Fuels and Combustion

8 hours

Calorific value - Definition of LCV, HCV. Measurement of calorific value using bomb calorimeter and Boy's calorimeter including numerical problems.

Controlled combustion of fuels - Air fuel ratio – minimum quantity of air by volume and by weight-Numerical problems-three way catalytic converter- selective catalytic reduction of NO_X; Knocking in IC engines-Octane and Cetane number - Antiknocking agents.

Module:7 Polymers

6 hours

Difference between thermoplastics and thermosetting plastics; Engineering application of plastics - ABS, PVC, PTFE and Bakelite; Compounding of plastics: molding of plastics for Car parts, bottle caps (Injection molding), Pipes, Hoses (Extrusion molding), Mobile Phone Cases, Battery Trays, (Compression molding), Fiber reinforced polymers, Composites (Transfer molding), PET bottles (blow molding); Conducting polymers - Polyacetylene- Mechanism of conduction – applications (polymers in sensors, self-cleaning windows)

Module:8 | Contemporary issues:

2 hours

Lecture by Industry Experts

Total Lecture Hours

45 hours

Mode of Evaluation: Internal Assessment (CAT, Quizzes, Digital Assignments) & FAT

List of Experiments

List	of Experiments		
	Experiment title		Hours
1.	Water Purification: Estimation of water hardness by EDT.	A method and its	3 hours
	removal by ion-exchange resin		
	Water Quality Monitoring:		3 hours
2.	Assessment of total dissolved oxygen in different water	er samples by	
	Winkler's method		
3.	Estimation of sulphate/chloride in drinking water by cond	uctivity method	3 hours

4/5	Material Analysis: Quantitative color	rimetric determinati	on of divale	ent metal ions of	6 hours		
	Ni/Fe/Cu using conventional and sma	art phone digital-im	aging metho	ods			
6.	Arduino microcontroller based sense	or for monitoring p	H/temperat	ure/conductivity	3 hours		
	in samples						
7.	Iron in carbon steel by potentiometry				3 hours		
8.	Construction and working of an Zn-C	Cu electrochemical	cell		3 hours		
9.	Determination of viscosity-average natural/synthetic polymers				6 hours		
10.	Preparation/demonstration of a work	ing model relevant	o syllabus.	Ex.	Non-contact		
	1. Construction and working of elect	rochemical energy	system – stu	idents	hours		
	should demonstrate working of the system.						
	2. Model corrosion studies (buckling	of Steel under appl	ied load).				
	3. Demonstration of BOD/COD						
	4. Construction of dye sensitized sola	ar cell and demonst	ration of its				
	working						
	5. Calcium in food samples						
	6. Air quality analysis						
	oratory Hours	30 hours					
Mod	Mode of Evaluation: Viva-voce and Lab performance & FAT

CHY1002	Environmental Sciences	L T P J C
		3 0 0 0 3
Pre-requisite	Chemistry of 12 th standard or equivalent	Syllabus version
Anti-requisite	Nil	v.1.1

- 1. To make students understand and appreciate the unity of life in all its forms, the implications of life style on the environment.
- 2. To understand the various causes for environmental degradation.
- 3. To understand individuals contribution in the environmental pollution.
- 4. To understand the impact of pollution at the global level and also in the local environment.

Expected Course Outcome:

Students will be able to

- 1. Students will recognize the environmental issues in a problem oriented interdisciplinary perspectives
- 2. Students will understand the key environmental issues, the science behind those problems and potential solutions.
- 3. Students will demonstrate the significance of biodiversity and its preservation
- 4. Students will identify various environmental hazards
- 5. Students will design various methods for the conservation of resources
- 6. Students will formulate action plans for sustainable alternatives that incorporate science, humanity, and social aspects
- 7. Students will have foundational knowledge enabling them to make sound life decisions as well as enter a career in an environmental profession or higher education.

Module:1 | Environment and Ecosystem

7 hours

Key environmental problems, their basic causes and sustainable solutions. IPAT equation. Ecosystem, earth – life support system and ecosystem components; Food chain, food web, Energy flow in ecosystem; Ecological succession- stages involved, Primary and secondary succession, Hydrarch, mesarch, xerarch; Nutrient, water, carbon, nitrogen, cycles; Effect of human activities on these cycles.

Module:2 Biodiversity

6 hours

Importance, types, mega-biodiversity; Species interaction - Extinct, endemic, endangered and rare species; Hot-spots; GM crops- Advantages and disadvantages; Terrestrial biodiversity and Aquatic biodiversity – Significance, Threats due to natural and anthropogenic activities and Conservation methods.

Module:3 Sustaining Natural Resources and Environmental Quality 7 hours

Environmental hazards – causes and solutions. Biological hazards – AIDS, Malaria, Chemical hazards- BPA, PCB, Phthalates, Mercury, Nuclear hazards- Risk and evaluation of hazards. Water footprint; virtual water, blue revolution. Water quality management and its conservation. Solid and hazardous waste – types and waste management methods.

Module:4	Energy Resources	6 hours

Renewable - Non renewable energy resources- Advantages and disadvantages - oil, Natural gas, Coal, Nuclear energy. Energy efficiency and renewable energy. Solar energy, Hydroelectric power, Ocean thermal energy, Wind and geothermal energy. Energy from biomass, solar- Hydrogen revolution.

Module:5 6 hours **Environmental Impact Assessment** Introduction to environmental impact analysis. EIA guidelines, Notification of Government of India (Environmental Protection Act – Air, water, forest and wild life). Impact assessment methodologies. Public awareness. Environmental priorities in India. Module:6 **Human Population Change and Environment** 6 hours Urban environmental problems; Consumerism and waste products; Promotion of economic development – Impact of population age structure – Women and child welfare, Women empowerment. Sustaining human societies: Economics, environment, policies and education. 5 hours Module:7 **Global Climatic Change and Mitigation** Climate disruption, Green house effect, Ozone layer depletion and Acid rain. Kyoto protocol, Carbon credits, Carbon sequestration methods and Montreal Protocol. Role of Information technology in environment-Case Studies. Module:8 **Contemporary issues** 2 hours Lecture by Industry Experts **Total Lecture Hours 45 hours** Text Books G. Tyler Miller and Scott E. Spoolman (2016), Environmental Science, 15th Edition, Cengage George Tyler Miller, Jr. and Scott Spoolman (2012), Living in the Environment – Principles, Connections and Solutions, 17th Edition, Brooks/Cole, USA. Reference Books David M.Hassenzahl, Mary Catherine Hager, Linda R.Berg Visualizing (2011),Environmental Science, 4thEdition, John Wiley & Sons, USA. 		0	0	6	0	3
Pre-requisite	Nil	Sy	llabı	ıs v	ers	sion
Anti-requisite	Nil				V	.1.0

- 1. To develop broad understanding of computers, programming languages and their generations
- 2. Introduce the essential skills for a logical thinking for problem solving
- 3. To gain expertise in essential skills in programming for problem solving using computer

Expected Course Outcome:

- 1. Understand the working principle of a computer and identify the purpose of a computer programming language.
- 2. Learn various problem solving approaches and ability to identify an appropriate approach to solve the problem
- 3. Differentiate the programming Language constructs appropriately to solve any problem
- 4. Solve various engineering problems using different data structures
- 5. Able to modulate the given problem using structural approach of programming
- 6. Efficiently handle data using flat files to process and store data for the given problem

CSE1002	Problem Solving and Object Oriented Programming]	L '	T]	PJ	l C
) (0	6 (3
Pre-requisite	Nil	Syll	ab	us	ver	sion
Anti-requisite	Nil				,	v.1.0

- 1. To emphasize the benefits of object oriented concepts
- 2. To enable the students to solve the real time applications using object oriented programming features.
- 3. To improve the skills of a logical thinking and to solve the problems using any processing elements

Expected Course Outcome:

- 1. Demonstrate the basics of procedural programming and to represent the real world entities asprogramming constructs
- 2. Enumerate object oriented concepts and translate real-world applications into graphical representations
- 3. Demonstrate the usage of classes and objects of the real world entities in applications
- 4. Discriminate the reusability and multiple interfaces with same functionality based features to solve complex computing problems
- 5. Illustrate possible error-handling constructs for unanticipated states or inputs and to use generic programming constructs to accommodate different datatypes
- 6. Validate the program against file inputs towards solving the problem

List of Challenging Experiments (Indicative)

1. | Postman Problem

A postman needs to walk down every street in his area in order to deliver the mail. Assume that the distances between the streets along the roads are given. The postman starts at the post office and returns back to the post office after delivering all the mails. Implement an algorithm to help the post man to walk minimum distance for the purpose.

2. Budget Allocation for Marketing Campaign

A mobile manufacturing company has got several marketing options such as Radio advertisement campaign, TV non peak hours campaign, City top paper network, Viral marketing campaign, Web advertising. From their previous experience, they have got a statistics about paybacks for each marketing option. Given the marketing budget (rupees in crores) for the current year and details of paybacks for each option, implement an algorithm to determine the amount that shall spent on each marketing option so that the company attains the maximum profit.

3. Missionaries and Cannibals

Three missionaries and three cannibals are on one side of a river, along with a boat that can hold one or two people. Implement an algorithm to find a way to get everyone to the other side of the river, without ever leaving a group of missionaries in one place outnumbered by the cannibals in that place.

4. Register Allocation Problem

A register is a component of a computer processor that can hold any type of data and can be accessed faster. As registers are faster to access, it is desirable to use them to the maximum so that the code execution is faster. For each code submitted to the processor, a register interference graph (RIG) is constructed. In a RIG, a node represents a temporary variable and

an edge is added between two nodes (variables) t1 and t2 if they are live simultaneously at some point in the program. During register allocation, two temporaries can be allocated to the same register if there is no edge connecting them. Given a RIG representing the dependencies between variables in a code, implement an algorithm to determine the number of registers required to store the variables and speed up the code execution.

5. Selective Job Scheduling Problem

A server is a machine that waits for requests from other machines and responds to them. The purpose of a server is to share hardware and software resources among clients. All the clients submit the jobs to the server for execution and the server may get multiple requests at a time. In such a situation, the server schedule the jobs submitted to it based on some criteria and logic. Each job contains two values namely time and memory required for execution. Assume that there are two servers that schedules jobs based on time and memory. The servers are named as Time_Schedule_Server and memory_Schedule_Server respectively. Design a OOP model and implement the time_Schedule_Server and memory_Schedule_Server. The Time_Schedule_Server arranges jobs based on time required for execution in ascending order whereas memory_Schedule_Server arranges jobs based on memory required for execution in ascending order.

6. Fragment Assembly in DNA Sequencing

DNA, or deoxyribonucleic acid, is the hereditary material in humans and almost all other organisms. The information in DNA is stored as a code made up of four chemical bases: adenine (A), guanine (G), cytosine (C), and thymine (T). In DNA sequencing, each DNA is sheared into millions of small fragments (reads) which assemble to form a single genomic sequence ("superstring"). Each read is a small string. In such a fragment assembly, given a set of reads, the objective is to determine the shortest superstring that contains all the reads. For example, given a set of strings, {000, 001, 010, 011, 100, 101, 110, 111} the shortest superstring is 0001110100. Given a set of reads, implement an algorithm to find the shortest superstring that contains all the given reads.

7. **House Wiring**

An electrician is wiring a house which has many rooms. Each room has many power points in different locations. Given a set of power points and the distances between them, implement an algorithm to find the minimum cable required.

- 1. To help students to identify the need for developing newer technologies for industrial / societal needs
- 2. To train students to propose and implement relevant technology for the development of the prototypes / products
- 3. To make the students learn to the use the methodologies available to assess the developed prototypes / products

Expected Course Outcome:

At the end of the course, the student will be able to

- 1. Identify real life problems related to society
- 2. Apply appropriate technology(ies) to address the identified problems using engineering principles and arrive at innovative solutions
 - 1. Identification of real life problems
 - 2. Field visits can be arranged by the faculty concerned
 - 3. 6-10 students can form a team (within the same / different discipline)
 - 4. Minimum of eight hours on self-managed team activity
 - 5. Appropriate scientific methodologies to be utilized to solve the identified issue
 - 6. Solution should be in the form of fabrication/coding/modeling/product design/process design/relevant scientific methodology(ies)
 - 7. Consolidated report to be submitted for assessment
 - 8. Participation, involvement and contribution in group discussions during the contact hours will be used as the modalities for the continuous assessment of the theory component
 - 9. Project outcome to be evaluated in terms of technical, economical, social, environmental, political and demographic feasibility
 - 10. Contribution of each group member to be assessed
 - 11. The project component to have three reviews with the weightage of 20:30:50

Mode of Evaluation: (No FAT) Continuous Assessment the project done – Mark weightage of 20:30:50 – project report to be submitted, presentation and project reviews

1. The course is designed so as to expose the students to industry environment and to take up on-site assignment as trainees or interns.

Expected Course Outcome:

At the end of this internship the student should be able to:

- 1. Have an exposure to industrial practices and to work in teams
- 2. Communicate effectively
- 3. Understand the impact of engineering solutions in a global, economic, environmental and societal context
- 4. Develop the ability to engage in research and to involve in life-long learning
- 5. Comprehend contemporary issues
- 6. Engage in establishing his/her digital footprint

Carriage Objective		-	

Expected Course Outcome:

- 1. Apply knowledge of mathematics, science, and engineering
- 2. Analyze problems and arrive at appropriate solutions
- 3. Succeed in competitive exams and technical interviews

Module:1 Electrical Circuits

Voltage and current sources: independent, dependent, ideal and practical; V-I relationships of resistor, inductor, mutual inductor and capacitor; transient analysis of RLC circuits with dc excitation. Kirchhoff's laws, mesh and nodal analysis, superposition, Thevenin's, Norton, maximum power transfer and reciprocity theorems. Peak, average and rms values of ac quantities; apparent, active and reactive powers; phasor analysis, impedance and admittance; series and parallel resonance, locus diagrams, realization of basic filters with R, L and C elements. One-port and two-port networks, driving point impedance and admittance, open-, and short circuit parameters

Module:2 | Signals and Systems

Periodic, aperiodic and impulse signals; Laplace, Fourier and z-transforms; transfer function, frequency response of first and second order linear time invariant systems, impulse response of systems; convolution, correlation. Discrete time system: impulse response, frequency response, pulse transfer function; DFT and FFT; basics of IIR and FIR filters

Module:3 | Control Systems

Mathematical modelling and representation of systems, Feedback principle, transfer function, Block diagrams and Signal flow graphs, Transient and Steady-state analysis of linear time invariant systems, Routh-Hurwitz and Nyquist criteria, Bode plots, Root loci, Stability analysis, Lag, Lead and Lead-Lag compensators; P, PI and PID controllers; State space model, State transition matrix

Module:4 | Analog and Digital Circuits

Characteristics and applications of diode, Zener diode, BJT and MOSFET; small signal analysis of transistor circuits, feedback amplifiers. Characteristics of operational amplifiers; applications of opamps: difference amplifier, adder, sub tractor, integrator, differentiator, instrumentation amplifier, precision rectifier, active filters and other circuits. Oscillators, signal generators, voltagecontrolled oscillators and phase locked loop. Combinational logic circuits, minimization of Boolean functions. IC families: TTL and CMOS. Arithmetic circuits, comparators, Schmitt trigger, multi-vibrators, sequential circuits, flip-flops, shift registers, timers and counters; sample- and-hold circuit, multiplexer, analog-to-digital (successive approximation, integrating, flash and sigma-delta) and digital-to-analog converters (weighted R, R-2R ladder and current steering logic). Characteristics of ADC and DAC (resolution, quantization, significant bits, conversion/settling time); basics of number systems, microcontroller: applications, memory and input output interfacing; basics of data acquisition systems.

Module:5 | Electrical Machines

Single phase transformer: equivalent circuit, phasor diagram, open circuit and short circuit tests, regulation and efficiency; Three-phase transformers: connections, vector groups, parallel operation; Auto-transformer, Electromechanical energy conversion principles; DC machines: separately excited, series and shunt, motoring and generating mode of operation and their characteristics, speed control of dc motors; Three-phase induction machines: principle of operation, types, performance, torque-speed characteristics, no-load and blocked-rotor tests, equivalent circuit, starting and speed control; Operating principle of single-phase induction motors; Synchronous machines: cylindrical and salient pole machines, performance and characteristics, regulation and parallel operation of generators, starting of synchronous motors; Types of losses and efficiency calculations of electric machines.

Module:6 | Power Electronics

Diodes, thyristors, MOSFETs, and IGBTs, focusing on their switching characteristics and applications. It includes AC-DC rectifiers, DC-DC choppers, DC-AC inverters, and AC-AC converters such as cycloconverters and AC voltage controllers. Resonant converters, PWM techniques, and modulation methods for efficiency improvement. Applications in motor drives, UPS, SMPS, HVDC, and FACTS are emphasized, along with harmonic analysis and power factor improvement. The subject is crucial for modern electrical systems, renewable energy, and electric vehicle applications.

Module:7 | Power Systems

Basic concepts of electrical power generation, AC and DC transmission concepts, Models and performance of transmission lines and cables, Economic Load Dispatch (with and without considering transmission losses), Series and shunt compensation, Electric field distribution and insulators, Distribution systems, Per-unit quantities, Bus admittance matrix, Gauss- Seidel and Newton-Raphson load flow methods, Voltage and Frequency control, Power factor correction, Symmetrical components, Symmetrical and unsymmetrical fault analysis, Principles of overcurrent, differential, directional and distance protection; Circuit breakers, System stability concepts, Equal area criterion.

Module:8 | Communication Engineering

Amplitude- and frequency modulation and demodulation; Shannon's sampling theorem, pulsecode modulation; frequency and time division multiplexing, amplitude-, phase-, frequency-, pulse shift keying for digital modulation.

1. To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field.

Expected Course Outcome:

At the end of the course the student will be able to

- 1. Formulate specific problem statements for ill-defined real life problems with reasonable assumptions and constraints.
- 2. Perform literature search and / or patent search in the area of interest.
- 3. Conduct experiments / Design and Analysis / solution iterations and document the results.
- 4. Perform error analysis / benchmarking / costing
- 5. Synthesise the results and arrive at scientific conclusions / products / solution
- 6. Document the results in the form of technical report / presentation

Contents

- 1. Capstone Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities.
- 2. Project can be for one or two semesters based on the completion of required number of credits as per the academic regulations.
- 3. Can be individual work or a group project, with a maximum of 3 students.
- 4. In case of group projects, the individual project report of each student should specify the individual's contribution to the group project.
- 5. Carried out inside or outside the university, in any relevant industry or research institution.
- 6. Publications in the peer reviewed journals / International Conferences will be an added advantage

Anti-requisite	Nil	v.1.1
Course Objecti		
_	ice grammar and vocabulary effectively	
*	re proficiency levels in LSRW skills in diverse social situations.	
	ze information and converse effectively in technical communication	n.
Expected Cour		
_	lish a deliberate reading and writing process with proper grammar	and vocabulary.
-	nend sentence structures while Listening and Reading.	
	nicate effectively and share ideas in formal and informal situations.	
	and specialized articles and technical instructions and write clear technical	chnical
correspo		
5. Critically	y think and analyze with verbal ability.	
Module:1	Grammatical Aspects	4 hours
Wiodule:1	Grammatical Aspects	4 110018
	n, Modal Verbs, Concord (SVA), Conditionals, Connectives	
•	sheets, Exercises	
Module:2	Vocabulary Enrichment	4 hours
Active & Passiv	e Vocabulary, Prefix and Suffix, High Frequency Words	
Activity: Works	sheets, Exercises	
Module:3	Phonics in English	4 Hours
Speech Sounds	- Vowels and Consonants - Minimal Pairs- Consonant Clusters- F	ast Tense Marker
and Plural Mark	er	
Activity: Work	sheets, Exercises	
Module:4	Syntactic and Semantic Errors	2 Hours
Tenses /SVA/A	rticles/ Prepositions/ Punctuation & Right Choice of Vocabulary	
Activity: Work	sheets, Exercises	
Module:5	Stylistic errors	2 Hours
Dangling Modi	l fiers, Parallelism, Standard English, Ambiguity, Redundancy, Brev	ity
6 6	sheets, Exercises	,
Module:6	Listening and Note making	6 Hours
	Extensive Listening - Scenes from plays of Shakespeare (Eg: Co	
	nice, Disguise Scene in <i>The Twelfth Night</i> , Death of Desdemona	
•	Caesar and Balcony scene from Romeo and Juliet)	,
	narizing; Note-making and drawing inferences from Short videos	
Module:7	Art of Public Speaking	6 Hours
Impromptu, Imp	portance of Non-verbal Communication, Technical Talks, Dynamic	s of Professional
	Individual & Group	
A T B		

Activity: Ice Breaking; Extempore speech; Structured technical talk and Group presentation

Mod	dule:8	Reading Comprehension Skills	4 Hours
Skir	nming, scar	nning, comprehensive reading, guessing words from context, underst	anding text
orga	nization, re	cognizing argument and counter-argument; distinguishing between main	information
and	supporting	detail, fact and opinion, hypothesis versus evidence; summarizing and	note-taking,
Crit	ical Reasoni	ng Questions – Reading and Discussion	
Acti	vity: Readin	ng of Newspapers Articles and Worksheets on Critical Reasoning from w	eb
reso	urces		
Mod	dule: 9	Creative Writing	4 Hours
Stru	cture of an e	essay, Developing ideas on analytical/ abstract topics	
Acti	vity: Movie	Review, Essay Writing on suggested Topics, Picture Descriptions	
Mod	dule: 10	Verbal Aptitude	6 hours
Woı	d Analogy,	Sentence Completion using Appropriate words, Sentence Correction	
Acti	vity: Practic	eing the use of appropriate words and sentences through web tools.	
Mod	dule: 11	Business Correspondence	4 hours
Fori	nal Letters-	Format and purpose: Business Letters - Sales and complaint letter	
Acti	vity: Letter	writing- request for Internship, Industrial Visit and Recommendation	
Mod	dule: 12	Career Development	6 hours
Tele	phone Etiqu	nette, Resume Preparation, Video Profile	
Act	ivity: Prepa	aration of Video Profile	
Mod	dule: 13	Art of Technical Writing - I	4 hours
Tecl	hnical Instru	ctions, Process and Functional Description	
Acti	vity: Writin	ng Technical Instructions	
Mod	dule: 14	Art of Technical Writing – II	4 hours

Date

HUM1021	Ethics and Values	L	T	P	J	C	
		2	0	0	0	2	
Pre-requisite	Nil	•	Sylla	Syllabus version			
Anti-requisite	requisite Nil						

- 1. To understand and appreciate the ethical issues faced by an individual in profession, society and polity
- 2. To understand the negative health impacts of certain unhealthy behaviors
- 3. To appreciate the need and importance of physical, emotional health and social health

Expected Course Outcome:

Students will be able to:

- 1. Comprehend ethical and moral values.
- 2. Understand various social problems and learn to act ethically
- 3. Understand the concept of addiction and how it will affect the physical and mental health
- 4. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects
- 5. Identify the main typologies, characteristics, activities, actors and forms of cybercrime

Module:1 Being Good and Responsible

5 hours

Gandhian values such as truth and non-violence – Comparative analysis on leaders of past and present – Society's interests versus self-interests - Personal Social Responsibility: Helping the needy, charity and serving the society

Module:2 Social Issues 1

4 hours

Harassment – Types - Prevention of harassment, Violence and Terrorism

Module:3 Social Issues 2

4 hours

Corruption: Ethical values, causes, impact, laws, prevention – Electoral malpractices; White collar crimes - Tax evasions – Unfair trade practices

Module: 4 Addiction and Health

5 hours

Peer pressure - Alcoholism: Ethical values, causes, impact, laws, prevention – Ill effects of smoking - Prevention of Suicides;

Sexual Health: Prevention and impact of pre-marital pregnancy and Sexually Transmitted Diseases

Module:5 Drug Abuse

3 hours

Abuse of different types of legal and illegal drugs: Ethical values, causes, impact, laws and prevention

Module:6 Personal and Professional Ethics

4 hours

Dishonesty - Stealing - Malpractices in Examinations – Plagiarism

Module:7 Abuse of Technologies

3 hours

Hacking and other cyber crimes, Addiction to mobile phone usage, Video games and Social networking

Module:8 | Contemporary issues:

2 hours

MAT1011	Calculus for Engineers		L	T	P	J	C
			3	0	2	0	4
Pre-requisite	Nil	S	Sylla	bus	V	ersi	on
Anti-requisite	Nil					V	7.1.0

- 1. To provide the requisite and relevant background necessary to understand the other important engineering mathematics courses offered for Engineers and Scientists.
- 2. To introduce important topics of applied mathematics, namely Single and Multivariable Calculus and Vector Calculus etc.
- 3. To impart the knowledge of Laplace transform, an important transform technique for Engineers which requires knowledge of integration

Expected Course Outcome:

At the end of this course the students should be able to

- 1. Apply differentiation to solve max/min problems and compute volumes of revolution and surface areas of revolution using Integration.
- 2. Apply the concepts of Laplace Transforms and solve problems with periodic functions, step functions, impulse functions and convolution.
- 3. Evaluate partial derivatives, limits, total differentials, Jacobians, Taylor series and optimization problems involving several variables.
- 4. Evaluate multiple integrals in Cartesian, Polar, Cylindrical and Spherical coordinates.
- 5. Analyse the concepts of gradient, directional derivatives, divergence, curl and apply them to find the circulation, work done, conservative field and Greens □, Stokes, Gauss divergence theorem.
- 6. Develop programming tools for engineering problems and visualize solutions.
- 7. Apply single variable differentiation and integration to solve applied problems in engineering and find the maxima and minima of functions

Module:1 Application of Single Variable Calculus 9 hours

Differentiation- Extrema on an Interval-Rolle's Theorem and the Mean Value Theorem-Increasing and Decreasing functions and First derivative test-Second derivative test-Maxima and Minima-Concavity. Integration-Average function value - Area between curves - Volumes of solids of revolution - Beta and Gamma functions—interrelation

Module:2 Laplace transforms 7 hours

Definition of Laplace transform-Properties-Laplace transform of periodic functions-Laplace transform of unit step function, Impulse function-Inverse Laplace transform-Convolution.

Module:3 Multivariable Calculus 4 hours

Functions of two variables-limits and continuity-partial derivatives —total differential-Jacobian and its properties.

Module:4 Application of Multivariable Calculus 5 hours

Taylor's expansion for two variables—maxima and minima—constrained maxima and minima—Lagrange's multiplier method.

Module:5	Multiple integrals	8 hours

Evaluation of double integrals—change of order of integration—change of variables between Cartesian and polar co-ordinates - Evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical co-ordinates- evaluation of multiple integrals using gamma and beta functions.

Module:	6 Vector Differentiation	5 hours								
	d vector valued functions — gradient, tangent plane scalar and vector potentials—Statement of vector id									
Module:	7 Vector Integration	5 hours								
	line, surface and volume integrals - Statement of Green's, Stoke's and Gauss divergence theorems -verification and evaluation of vector integrals using them.									
Module:	8 Contemporary Issues:	2 hours								
	y Expert Lecture	2 110015

- 1. To provide students with a framework that will help them choose the appropriate descriptive methods in various data analysis situations.
- 2. To analyse distributions and relationship of real-time data.
- 3. To apply estimation and testing methods to make inference and modelling techniques for decision making.

Expected Course Outcome:

At the end of the course the student should be able to:

- 1. Analyze statistical data using measures of central tendency and dispersion.
- 2. Analyze and apply the concepts of random variables and distribution functions to obtain moments and characteristic functions.
- 3. Analyze the experimental data using correlation and regression analysis and interpret the results.
- 4. Apply the concepts of inferential statistics and interpret the results.
- 5. Apply the statistical methodology in solving reliability engineering problems.
- 6. Develop programming tools for engineering problems and visualize solutions.

Module: 1	Introduction to Statistics	6 hours							
112044101 1		0 110415							
Introduction to statis	tics and data analysis-Measures o	f central tendency –Measures of							
variability-[Moments	-Skewness-Kurtosis (Concepts only)].							
Module: 2	Random variables	8 hours							
Introduction -random	variables-Probability mass Function	, distribution and density functions							
- joint Probability distribution and joint density functions- Marginal, conditional distribution									
and density functions- Mathematical expectation, and its properties Covariance, moment									
generating function – characteristic function.									
Module: 3	Correlation and regression	4 hours							
Correlation and Regression – Rank Correlation- Partial and Multiple correlation- Multiple									
regression.									
Module: 4	Probability Distributions	7 hours							
Binomial and Poisson	distributions – Normal distribution	– Gamma distribution –							
Exponential distributi	on – Weibull distribution.								
Module: 5	Hypothesis Testing I	4 hours							
Testing of hypothesi	s – Introduction-Types of errors, ca	ritical region, procedure of testing							
hypothesis-Large san	pple tests- Z test for Single Proportion	on, Difference of Proportion, mean							
and difference of mea	ins.	-							
Module: 6	Hypothesis Testing II	9 hours							
Small sample tests- S	tudent's t-test, F-test- chi-square test	- goodness of fit - independence of							
attributes- Design of	Experiments - Analysis of variance	one and two way classifications -							
CRD-RBD- LSD.	·	•							
Module: 7	Reliability	5 hours

PHY1701	Engineering Physics	L T P J C
		3 0 2 0 4
Pre-requisite	Nil	Syllabus version
Anti-requisite	Nil	v.1.0
Course Objective		•

- 1. Having an ability to apply mathematics and science in engineering applications
- 2. Having a clear understanding of the subject related concepts and of contemporary issues
- 3. Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking skills which cannot be codified)

Expected Course Outcome: On the completion of this course the student will be able to:

- 1. Comprehend the dual nature of radiation and matter.
- 2. Compute Schrodinger's equations to solve finite and infinite potential problems.
- 3. Analyze quantum ideas at the nanoscale
- 4. Apply quantum ideas for understanding the operation and working principle of optoelectronic devices
- 5. To analyze the Maxwell s equations in differential and integral form.
- 6. To classify the optical fiber for different Engineering applications.
- 7. Apply the various types of optoelectronic devices for designing a typical optical fiber communication system.
- 8. To demonstrate the quantum mechanical ideas

Module:1 Introduction to Modern Physics

6 hours

Planck's concept (hypothesis), Compton Effect, Particle properties of wave: Matter Waves, Davisson Germer Experiment, Heisenberg Uncertainty Principle, Wave function, and Schrodinger equation (time dependent & independent).

Module:2 Applications of Quantum Physics

5 hours

Particle in a 1-D box (Eigen Value and Eigen Function), 3-D Analysis (Qualitative), Tunneling Effect (Qualitative) (AB 205), Scanning Tunneling Microscope (STM).

Module:3 Nanophysics

5 hours

Introduction to Nano-materials, Moore's law, Properties of Nano-materials, Quantum confinement, Quantum well, wire & dot, Carbon Nano-tubes (CNT), Applications of nanotechnology in industry.

Module:4 Laser Principles and Engineering Application

6 hours

Laser Characteristics, Spatial and Temporal Coherence, Einstein Coefficient & its significance, Population inversion, Two, three & four level systems, Pumping schemes, Threshold gain coefficient, Components of laser, Nd-YAG, He-Ne, CO2 and Dye laser and their engineering applications.

Module:5 Electromagnetic Theory and its application

6 hours

Physics of Divergence, Gradient and Curl, Qualitative understanding of surface and volume integral, Maxwell Equations (Qualitative), Wave Equation (Derivation), EM Waves, Phase velocity, Group velocity, Group index , Wave guide (Qualitative)

Module:6 Propagation of EM waves in Optical fibers

6 hours

Light propagation through fibers, Acceptance angle, Numerical Aperture, Types of fibers - step

in		led index, single mode & multimode, Attenuation, Dispersion-intern	modal and
in	tramodal		
Mod	dule:7	Optoelectronic Devices & Applications of Optical fibers	9 hours

PHY1901	Introduction to Innovative Projects	L T P J C
		1 0 0 4 2
Pre-requisite	Nil	Syllabus version
Anti-requisite	Nil	v.1.0
Course Objectives	s:	
This course is offer	red to the students in the 1 Year of B.Tech. in order to orie	nt them towards
independent, system	mic thinking and be innovative.	
1. To make studer	its confident enough to handle the day to day issues.	
2. To develop the	"Thinking Skill" of the students, especially Creative Thinkin	ng Skills
3. To train the stu	dents to be innovative in all their activities	
4. To prepare a pr	oject report on a socially relevant theme as a solution to the	existing issues

Expected Course Outcome: Students will be able to

- 1. Develop innovative thinking skills
- 2. Apply tools and techniques for generating innovative ideas
- 3. Propose innovative solutions for societal/technical problems

Module:1 A Self Confidence 1 hour

Understanding self – Johari Window –SWOT Analysis – Self Esteem – Being a contributor – Case Study

Project : Exploring self, understanding surrounding, thinking about how s(he) can be a contributor for the society, Creating a big picture of being an innovator – writing a 1000 words imaginary autobiography of self – Topic "Mr X – the great innovator of 2015" and upload. (4 **non-contact hours**)

Module:1 B | Thinking Skill

1 hour

Thinking and Behaviour – Types of thinking – Concrete – Abstract, Convergent, Divergent, Creative, Analytical, Sequential and Holistic thinking – Chunking Triangle – Context Grid – Examples – Case Study.

Project : Meeting at least 50 people belonging to various strata of life and talk to them / make field visits to identify a min of 100 society related issues, problems for which they need solutions and categories them and upload along with details of people met and lessons learnt. (4 noncontact hours)

Module:1 C | Lateral Thinking Skill

1 hour

 $Blooms\ Taxonomy-HOTS-Out of\ the\ box\ thinking-deBono\ lateral\ thinking\ model-Examples$

Project: Last weeks - incomplete portion to be done and uploaded

Module:2 A | Creativity

1 hour

Creativity Models – Walla – Barrons – Koberg & Begnall – Examples

Project : Selecting 5 out of 100 issues identified for future work. Criteria based approach for prioritisation, use of statistical tools & upload . (4 non-contact hours)

Module:2 B | **Brainstorming**

1 hour

25 brainstorming techniques and examples

Project: Brainstorm and come out with as many solutions as possible for the top 5 issues identified & upload. (4 non-contact hours)

Module:3 Mind Mapping 1 hour

Mind Mapping techniques and guidelines. Drawing a mind map

Project : Using Mind Maps get another set of solutions forthe next 5 issues (issue 6-10). (4 non-contact hours)

Module:4 A | Systems thinking

1 hour

Systems Thinking essentials – examples – Counter Intuitive condemns

Project : Select 1 issue / problem for which the possible solutions are available with you. Apply Systems Thinking process and pick up one solution [explanation should be given why the other possible solutions have been left out]. Go back to the customer and assess the acceptability and upload. (4 non-contact hours)

Module:4 B Design Thinking

1 hour

Design thinking process – Human element of design thinking – case study

Project: Apply design thinking to the selected solution, apply the engineering & scientific tinge to it. Participate in "design week" celebrations upload the weeks learning out come.

Module:5 A Innovation

1 hour

Difference between Creativity and Innovation – Examples of innovation –Being innovative.

Project: A literature searches on prototyping of your solution finalized. Prepare a prototype model or process and upload. . **(4 non- contact hours)**

Module:5 B | **Blocks for Innovation**

1 hour

Identify Blocks for creativity and innovation - overcoming obstacles - Case Study

Project: Project presentation on problem identification, solution, innovations-expected

results – Interim review with PPT presentation. . (4 non- contact hours)

Module:5 C Innovation Process

1 hour

Steps for Innovation – right climate for innovation

Project: Refining the project, based on the review report and uploading the text. . (4 noncontact hours)

Module:6 A Innovation in India

1 hour

Stories of 10 Indian innovations

Project: Making the project better with add ons. . (4 non- contact hours)

Module: 6 B JUGAAD Innovation

1 hour

Frugal and flexible approach to innovation - doing more with less Indian Examples

Project: Fine tuning the innovation project with JUGAAD principles and uploading (Credit for JUGAAD implementation). (4 non- contact hours)

Module:7 A Innovation Project Proposal Presentation

1 hour

Project proposal contents, economic input, ROI – Template

Project: Presentation of the innovative project proposal and upload . (4 non-contact hours)

Module:8 A Contemporary issue in Innovation

1 hour

Contemporary issue in Innovation

Project: Final project Presentation, Viva voce Exam (4 non-contact hours)

		3	0	0	0	3
Pre-requisite	Nil	Sy	llabı	us v	ers	ion
Anti-requisite	Nil		•		v.	1.0

- 1. Formulate the mathematical model of the electric circuits using basic laws
- 2. Apply various network theorems to solve the electric circuits
- 3. Compute and analyze the steady state and transient responses of DC and AC circuits

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Formulate the equations of the electric circuits using basic laws
- 2. Determine the response of DC circuits using basic analysis methods
- 3. Compute the response of DC circuits using network theorems
- 4. Analyze the transient behavior of electric circuits with different types of source
- 5. Describe the elements of AC circuits and the phasor concept
- 6. Design resonance circuits, and solve three phase ac circuits
- 7. Solve simple magnetic circuits

Module:1 Fundamentals of Electric Circuits

Introduction to Circuit Elements, Ohms Law and Kirchhoff's Laws. Voltage and Current Division, Star-Delta Transformation and Source Transformation.

Module:2 Linear Circuit Analysis

5 Hours

5 Hours

Nodal and Mesh Analysis of Linear Network with Independent and Dependent DC sources.

Module:3 Network Theorems

7 Hours

Theorem, Norton's Theorem, Maximum Power Transfer Theorem and Superposition Theorem for circuits with independent and dependent sources.

Module:4 Transient Circuit Analysis

7 Hours

Dynamic Circuit Elements – L and C. Analysis of Source Free RC, RL and RLC Circuits, Singularity Functions, Step Response of RC, RL and RLC Circuits.

Module:5 Introduction to Phasors

7 Hours

Introduction to Sinusoids and Phasors, Impedance and Admittance with Phasors Representation. RMS and Average Values of Sinusoids, Instantaneous and Average Power, and Complex Power - Real Power, Reactive Power and Apparent Power Calculations and Power Factor.

Module:6 AC Circuits and Resonance

7 Hours

Sinusoidal Steady State Analysis for AC circuits with independent sources. Frequency Response of Circuits with R, L and C Combinations. Resonance in Series and Parallel RLC Circuits. Balanced Three Phase Circuits, Power in a Balanced System, Three Phase Power Measurement.

Module:7 Magnetic Circuits Ho	ours 5
1120 WWIET 1120 GILLOWING	

Magnetically Coupled Circuits, Self and Mutual Inductance, Dot Convention, Energy in Coupled Circuits, Mesh Analysis of Magnetically Coupled Circuits.

Module:8	Contemporary issues:	2 hours
	Total Lecture Hours	45 Hours

Anti-requisite	Nil					V	. 1.1

- 1. To convey the basic physical concepts that lie behind all electrical engineering, the interactions between charged particles, whether stationary or in motion.
- 2. To examine the electric and magnetic forces between stationary and steadily moving charged particles.
- 3. To study the various electric & magnetic field concepts both in static and time varying condition.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Explore different coordinate systems related to magnetic fields.
- 2. Define the electric flux density, field intensity and different charge distributions.
- 3. Demonstrate the boundary conditions and method of images.
- 4. Compare the electric and magnetic boundary conditions, calculate the capacitance and inductance.
- 5. Analyze Maxwell equations.
- 6. Summarise the electric magnetic waves and wave propagation in different medium.
- 7. Apply the electric and magnetic field concepts
- 8. Design and Conduct experiments, as well as analyze and interpret data

Module:1 Review of Scalar and Vector Fields

Different Co-ordinate Systems: Cartesian, Cylindrical and Spherical –Differential elements in different coordinate systems – Del Operator: Divergence, Curl and Gradient, Divergence Theorem – Stoke's Theorem - Helmholtz's Decomposition.

Module:2 Electrostatics: Charges

5 Hours

6 Hours

Coulomb's law – Electric Field Intensity – Electric Flux – Gauss's Law – Potential due to Point, Line and Surface Charge Distributions.

Module:3 Electric Fields in Dielectrics and Conductors

8 Hours

Different current flow mechanisms – Continuity equation and relaxation time - Boundary conditions – Laplace and Poisson's equations - Solutions – Analytical Methods – Variables separable methods – Method of images – Numerical Techniques - Finite Difference Method – Electrostatic Energy – Capacitance Calculations

Module:4 Magneto statics

8 Hours

Magnetic Fields – Magnetic Flux – Biot Savart's Law – Ampere's Law – Magnetic Torque and Moment – Forces due to Magnetic Fields – Vector Potential – Magnetic Boundary Conditions – Inductors and Inductances – Calculations - Magnetic Energy

Module:5 Electromagnetic Fields

8 Hours

 $Faraday's\ law-Lenz's\ Law-Maxwell's\ equations-Displacement\ current-Maxwell's\ Equations\ in\ Final\ Forms-Time\ Varying\ Fields-Relation\ between\ field\ theory\ and\ circuit\ theory$

Pre-requisite	Pre-requisite MAT2002 S					ion
Anti-requisite	Nil				v.	1.0

- 1. To understand the mathematical representations of signals and systems in continuous and discrete domain.
- 2. Analyse and perform various operations with the signals.
- 3. Analyse the response of linear time invariant (LTI) systems in continuous and discrete domain.
- 4. Understand sampling theorem and represent signals in the frequency domain.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Apply mathematical tools to perform operations and classify different types of signals.
- 2. Analyze various types of LTI systems based on their behaviour
- 3. Analyze continuous and discrete LTI systems using Fourier series.
- 4. Differentiate the behaviour of LTI systems as periodic and aperiodic signals using Fourier Transforms.
- 5. Construct the original signal from samples using interpolation
- 6. Apply Laplace Transform to analyze continuous LTI systems
- 7. Apply Z-transform to analyze discrete LTI systems

Module:1 Fundamentals of Signals

5 Hours

Representation of Continuous and Discrete-time Signals, Unit Step, Unit Ramp, Unit Impulse, Sinusoidal and Complex Exponentials. Classification of signals – Periodic and Aperiodic Signal, Even and Odd Signal, Energy and Power Signal, Deterministic and Random signals. Transformation of Independent Variables –Time Shifting, Time Scaling and Time Reversal.

Module:2 | Fundamentals of Systems

5 Hours

Representation of Continuous and Discrete Time Systems. Classification of systems - Static and Dynamic, Linear and Nonlinear, Time variant and Time Invariant, Causal and Non–Causal, Stable and unstable, Invertible and non- invertible systems. Block Diagram Representation and Interconnection of Systems

Module:3 Analysis of LTI System

6 Hours

Impulse Response of Continuous and Discrete Time LTI Systems. Convolution, Basic properties of systems using impulse response.

Module:4 Fourier Representation of Periodic Signals and LTI Systems 6 Hours

Fourier Series Representation of Continuous Time and Discrete-time periodic signals, Properties of Fourier Series, Parseval's relation, Response of LTI Systems to Complex Exponentials.

- 1. Analyse the steady state response of circuits and discuss various theorems and their applications
- 2. Apply Laplace transform and Fourier transform techniques to circuits and obtain the complete response
- 3. Design passive filters and analyse its frequency response.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Apply node voltage and mesh current methods to analyse circuits in steady state.
- 2. Apply Laplace transform techniques for solving problems and discuss the complete response of circuits.
- 3. Derive the transfer function and identify its poles and zeros
- 4. Analyse the harmonics in nonsinusoidal inputs to circuits using Fourier series.
- 5. Apply Fourier transform to circuits with nonsinusoidal inputs
- 6. Design passive filters and analyse the frequency response.
- 7. Evaluate and relate two-port network parameters.

Module:1 Sinusoidal Steady State Analysis

6 Hours

Review of Phasors. Nodal Analysis, Mesh Analysis, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem and Superposition Theorem for circuits with independent and dependent sinusoidal sources

Module:2 | **Modeling of Network in s-Domain**

6 Hours

Circuit Models of R, L and C in s-Domain. Application of Laplace Transforms to integro-differential equations of RL, RC and RLC circuits. Transfer Function. Impulse Response of RL and RC Circuits and Response to any other sources using convolution integral.

Module: 3 Complete Response of Networks

6 Hours

Circuit Analysis with zero and non zero initial conditions in s-domain. Pole-Zero Maps. Network Stability.

Module:4 Networks with Periodic Non-Sinusoidal Excitation

7 Hours

Trigonometric Fourier Series for Non-Sinusoidal Functions. Circuit Analysis. Average Power and RMS Values using Fourier Coefficients. Exponential Fourier Series.

Module:5 Network Analysis using Fourier Transform

7 Hours

Fourier Transform for commonly used periodic and aperiodic functions. Circuit Analysis in frequency domain. Energy in the signal using Parseval's Theorem.

Module:6 Design of Filters

4 Hours

Review of Frequency Response of RL, RC and RLC circuits. Passive Filters—Low Pass, High Pass, Band Pass and Band Stop. Magnitude and Frequency Scaling.

Module	e :7	Two Port Networks			6 Hours
			1		parameters, Transmission and
Hybrid	Paran	neters. Relationship between	parameter, Interco	nnection of	of Networks.

Course Objective		•					

- 1. To apply the knowledge of solid state devices principles to analyze electronic circuits.
- 2. To design amplifiers under different configurations and study their responses
- 3. To have hands on learning experience and software knowledge by doing practical exercises and projects.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Explain the behavior of semiconductor devices
- 2. Analyze diode circuits to determine voltages and currents
- 3. Explain the characteristics and biasing methods of BJTs and MOSFETs
- 4. Compare the BJT amplifiers configuration
- 5. Compare the MOSFET amplifiers configurations
- 6. Analyze the high speed response of semiconducting devices
- 7. Compare and contrast the negative and positive feedback in amplifiers
- 8.Design and experimentally verify the circuit for the given specifications
- 9. Design and development of an electronic circuit for engineering applications

Module:1Semiconductor Device Physics2 HoursSemi-conductors, charge carriers, intrinsic and extrinsic semi-conductors, carrier generation, recombination, injection of carriers, Drift and diffusion, carrier mobility, conductivity.generation,

Module:2 | Diode Circuit Analysis

4 Hours

PN junction diode – Formation of Junction, Junction Capacitance, characteristics, Diode equations, Diode Circuits – Clipper and Clamper, rectifiers with and without filters, other multiple diode circuits, Regulated power supplies.

Module:3 Transistor DC Analysis

5 Hours

BJT Characteristics, current gains, h-parameters, MOSFET Characteristics, Load line and Operating point analysis, DC analysis and biasing of BJTs and MOSFETs.

Module:4 BJT Amplifiers

5 Hours

Small signal analysis of BJT amplifiers, Calculation of Gain, Input Impedance and Output Impedance. Basic BJT amplifier Configurations (CE, CC and CB). Power Amplifiers.

Module:5 | **MOSFET Amplifiers**

4 Hours

Small signal analysis of MOSFET amplifiers. Calculation of Gain, Input Impedance and Output Impedance. Basic MOSFET amplifier configurations - (CS, CD and CG) amplifiers.

Module:6 | Frequency response

5 Hours

Amplifier Frequency Response, System Transfer Functions, Frequency Response of Transistor Amplifier with Circuit Capacitors, Frequency Response of the FET, High-Frequency Response of

EEE2003	Electromechanical Energy Conversion	\mathbf{L}	T	P	J	C
		3	0	2	0	4
Pre-requisite	EEE1002/EEE1001		Syll	abu	s ver	sion
Anti-requisite	Nil				V	. 1.0
Course Objectives:						
1. To analyze the bas	ic principles of DC Machines					
0.75 1 . 4		1 N T 1 '				

- 2. To derive the various relations of electrical and mechanical parameters in AC Machines
- 3. Evaluate the characteristics and testing of AC Machines

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Illustrate the basic principles of electromechanical energy conversion.
- 2. Describe the basic operation & characteristics of DC generator
- 3. Analyze the various starting technologies and performance characteristics of DC Motor
- 4. Apply magnetic circuit concepts and analyze performance of transformer
- 5. Analyze the starting methods of Induction Motor.
- 6. Describe the performance parameters of an induction motor using equivalent circuit and circle diagram.
- 7. Analyze the performance characteristics of Synchronous Machine
- 8. Analyze the performance characteristics of DC and AC machines by conducting suitable experiments.

Module:1 Principle of Electromechanical Energy Conversion	4 Hours
Magnetic circuits - Singly excited systems - doubly excited systems - Force and T	orque.

Module:2D.C. Generator6 HoursConstruction –Windings- Armature Reaction –Commutation-EMF Equation – Types of Generators-

Magnetization and load characteristics - Voltage Regulation - Parallel operation - Applications.

Module:3D.C. Motor5 HoursMethods of excitation - Equivalent circuit - Torque equation - Performance characteristics - Losses and

efficiency - Speed control and starting techniques - Applications

Module:4 Transformers 7 Hours

Construction – types-EMF Equation-Transformer on No load and load-phasor diagram –Efficiency and Voltage Regulation –Transformer testing- Equivalent Circuit – predetermination of Efficiency and Voltage Regulation-Parallel Operation –3 Phase Transformers Applications.

Module:5 Induction Motor 6 Hours

3 phase induction motor: Construction Rotating Magnetic Field -Working principle-Power Transferred across air gap, Torque and Power output-Starting methods - Single phase induction motors - Applications.

Module:6Testing of Induction Machines6 HoursDetermination of Equivalent Circuit parameters – performance characteristics Circle Diagram – Speed
Control – Induction Generator Applications.

Module:7Synchronous Machines9 HoursSynchronous Generator (Alternator): Construction-Induced EMF - Synchronous reactance - PhasorDiagram and Voltage regulation - Parallel operation - Synchronizing of alternator Effects of change in

excitation and mechanical input. Synchronous Motor: Three-phase synchronous motor - Types - Principle of operation - Methods of starting - Hunting and Damper windings - synchronous condenser -

Appl	lications.

Course Objective	g•	•					

- Course Objectives:
- 1. To provide basic understanding of electrical and electronic measurement systems.
- 2. To give a thorough knowledge of varieties of measuring instruments, its operating principles, and limitations.
- 3. To provide basic understanding of data acquisition systems and virtual instrumentation

Expected Course Outcome:

On the completion of each module the student will be able to:

- 1. Explain the functions of instrumental elements and evaluate the errors in the process
- 2. Design a meter for measurement of electrical variables like voltage, current and power
- 3. Design DC bridges for measurement of various level of resistances,
- 4. Design AC bridges for measurement of various levels of Inductance, capacitance and frequencies
- 5. Analyze various transducers for measurement process based on the applications
- 6. Outline the importance and working of digital instruments
- 7. Develop a Virtual Instrumentation system through LabVIEW software.
- 8. Design a component or a product applying all the relevant standards with realistic constraints.

Module:1 Introduction 4 Hours

Functional elements of an instrument, Static and dynamic characteristics of zero and first order instruments – sources of Errors in measurement, – Techniques for reducing error, – loading effect of instruments, Statistical evaluation of measurement data.

Module:2 Electrical and Electronic Instruments 4 Hours

Classification of instruments,— Working Principle of potentiometer, Design of analog voltmeter, ammeter using PMMC and MI and its loading effect.—Principle of working power factor meter—Single phase wattmeter, analog energy meter, Use of Instrument transformers.

Module:3 D.C bridges 4 Hours

Design of deflection bridges – Wheatstone bridge, Kelvin bridge, Kelvin double bridge and their merits and demerits.

Module:4 A.C bridges 4 Hours

Maxwell bridge, Anderson bridge, Schering Bridge, Wien Bridge and their Merits and Demerits.

Module:5 Transducers and Display devices 4 Hours

Classification of transducers – Selection of transducers – Resistive, capacitive & inductive transducers – Piezoelectric and digital transducers. Working principle and specifications of the Analog CRO and digital CRO, LED and LCD.

Module:6 Digital Instruments: 4 Hours

Comparison of analog and digital techniques – digital voltmeter – millimeter's – Energy meter – frequency counters – measurement of frequency and time interval – extension of frequency range – Automation in digital instruments, Automatic polarity indication, automatic ranging, automatic zeroing, fully automatic digital instruments, Computer controlled test systems, Virtual instruments.

Module:7	Data acquisition using LabVIEW:	4 Hours

Elements of digital data acquisition system—interfacing of transducers—multiplexing—data loggers—computer controlled instrumentation—IEEE 488 bus -DAQ cards and accessories, NI ELVIS, Data Acquisition with LabVIEW-Interfacing a sensor to LabVIEW-Interfacing an actuator to LabVIEW.

Pre-requisite	EEE1005	Syll	abı	us v	ver	sion
Anti-requisite	Nil				V	. 2.0

- 1. To recognize Linear Time-Invariant (LTI) discrete-time systems
- 2. To design IIR filters using impulse invariance & bilinear transformation techniques
- 3. To design FIR filters using various window functions
- 4. To obtain knowledge and ability to use the appropriate tools like digital signal processors to build DSP systems for real time problems

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Apply transform techniques to analyze the discrete time systems.
- 2. Design analog filters using Chebyshev and Butterworth polynomials for given specifications
- 3. Design IIR filters using transformation techniques
- 4. Design of FIR filters using various windowing techniques
- 5. Construct various structures for digital filter realization
- 6. Design of Wiener Filter and adaptive filter to remove artefacts and interferences for signal processing application
- 7. Explain filter operations in fixed point and floating point digital signal processors
- 8. Analyze the performance characteristics of filters using simulation tools and implement DSP algorithms using digital signal processor.

Module:1Frequency Analysis of Signals and Systems6 HoursReview of discrete -time signals and systems - Classification,Z- transform - ROC-

stability/causality analysis, DTFT- Frequency domain sampling - DFT-Properties-Frequency analysis of signals using DFT-FFT Algorithm-Radix-2 FFT algorithms-Applications of FFT.

Module:2 Theory and Design of Analog Filters 4 Hours

Design techniques for analog low pass filter -Butterworth and Chebyshev approximations, frequency transformation, Properties.

Module:3 Design of IIR Digital Filters 4 Hours

IIR filter design - Bilinear and Impulse Invariant Transformation techniques - Spectral transformation of digital filters.

Module:4 Design of FIR Digital Filters 4 Hours

FIR Filter Design - Phase and group delay - Design characteristics of FIR filters with linear phase – Frequency response of linear phase FIR filters – Design of FIR filters using Rectangular, Hamming, Hanning, Bartlett and Blackmann window functions.

Module:5	Realizat	tion of	Digital Filt	4 Hours			
Direct Forms	s I and II,	Cascao	le, Parallel a	and L	attice structu	ires.

		3 0 2 0 4
Pre-requisite	EEE2001, MAT2002/EEE1001	Syllabus version
Anti-requisite	Nil	v. 1.0
Course Objective	06.	<u> </u>

- 1. To present a clear exposition of the classical methods of control engineering, physical system modelling, and basic principles of frequency and time domain design techniques.
- 2. To teach the practical control system design with realistic system specifications.
- 3. To provide knowledge of state variable models and fundamental notions of state feedback design

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Formulate the transfer function model for electrical, mechanical and electromechanical systems
- 2. Analyze the time response characteristics of given first and second order system for various input
- 3. Determine the stability of linear systems using root locus technique
- 4. Determine the frequency response specifications using bode and polar plot
- 5. Determine the stability of linear system in the frequency domain
- 6. Design compensators and controllers for the given specifications using bode plot
- 7. Analyze the system using state space model
- 8. Analyze the performance of the designed controller by conducting suitable experiments

6 hours **Module:1** Systems and their Representations Basic elements in control systems - open loop & closed loop - Transfer functions of mechanical, electrical and analogous systems. Block diagram reduction - signal flow graphs.

Module:2 | Time Response Analysis

6 hours

Standard test signals, Time response of first and second order system, Time domain specifications, Steady state error, error constants, generalized error coefficient.

Module:3 | Stability Analysis and Root Locus

6 hours

Stability - concept and definition, Characteristic equation – Location of poles – Routh Hurwitz criterion - Root locus techniques: construction, properties and applications.

Module:4 | Frequency Response Analysis

6 hours

Bode plot - Polar plot - Correlation between frequency domain and time domain specifications

Stability in Frequency Domain

6 hours

Relative stability, Gain margin, Phase margin, stability analysis using frequency response methods, Nyquist stability criterion.

Module:6 | Compensator and Controller

7 hours

Realization of basic compensators, cascade compensation in time domain and frequency domain, feedback compensation - Design of lag, lead, lag-lead series compensator (using Bode plot), P, PI and PID controllers in frequency domain.

Module:7 | State Space Analysis

6 hours

Concepts of state variable and state model, Solution of state equation, State space to transfer function conversion, Controllability, Observability, Pole placement control Module:8 **Contemporary issues:** 2 hours **Total Lecture Hours** 45 hours Text Book(s) Norman S. Nise, "Control System Engineering", John Wiley & Sons, 6th Edition, 2011. 2. Benjamin C Kuo "Automatic Control System" John Wiley & Sons, 8th Edition, 2007. **Reference Books** K. - 1. To introduce the functional building blocks, characteristics and applications of Analog ICs
- 2. To understand different methods for design and implementation of Digital circuits
- 3. To introduce the various applications of digital and analog ICs

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Explain the performance characteristics of Op-Amp.
- 2. Design Op-Amp based circuits for various linear and non-linear applications.
- 3. Design 555 timer based multivibrators and fixed & variable voltage regulators
- 4. Realization of Boolean operations using De Morgan's laws, Karnaugh map and Quine-McCluskey method
- 5. Design of combinational circuit
- 6. Design of synchronous sequential circuit
- 7. Design of asynchronous sequential circuit using state diagram and design of analog/digital IC based circuit for industrial control applications
- 8. Analyze the performance of linear & non-linear and sequential & combinational circuit using simulation and hardware experimentation

Module:1 Operational Amplifier

6 Hours

DC Performance - The operational amplifier, Input resistance, Output resistance, Open loop gain, Bias currents, Offset currents, Offset voltage, Common mode rejection ratio. Negative feedback Amplifier, closed loop gain, Differential amplifier.AC Performance - Frequency response, Transient response, Stability, Compensation, Poles and zeros cancelation

Module:2 OPAMP Applications

7 Hours

Linear applications of op-amp – summing, subtracting, averaging amplifier, voltage to current converter, current to voltage converter, differentiator and integrator. Nonlinear applications – comparator, Multivibrators, Schmitt Triggers, Precision Diode, Half wave and full wave rectifiers, Peak detector, Wave form generators and Active Filters.

Module:3 Timer and Power Supplies

5 Hours

555 Timer and its applications, monostable multivibrator, Astable multivibrator. Linear voltage regulator, 78XX and 79XX family, 723 IC voltage regulator, Switching regulators.

Module:4 Digital Techniques

6 Hours

Number systems - Binary, octal and hexadecimal numbers. Binary codes, Logic Gates, Boolean algebra - Conversion and operations. De Morgan's laws, Truth tables, Karnaugh's map, Min term, Max term, SOP, POS, Synthesis of Boolean functions, Quine Mccluskey method.

Module:5 | Combinational Circuit Design

6 Hours

Arithmetic circuits, Parity generator, Seven-segment display, Analysis and Design Procedure - Multiplexer, Decoder, Encoder, Design using programmable logic Devices.

	(Deemed to be University under section 3 of UGC Act,	1956)

- 1. To gain adequate knowledge on various aspects, issues related to power systems and identifying suitable solution methods.
- 2. To apply the concepts in solving practical power system problems.

Expected Course Outcome:

On completion of the course the student will be able to

- 1. Estimate the transmission line parameters for single and three phase transmission line with symmetrical and un-symmetrical spacing
- 2. Compute Voltage regulation and transmission efficiency of given transmission line using equivalent circuit
- 3. Categorize various components of transmission network and study the distribution system
- 4. Construct equivalent per unit model of three phase transmission line.
- 5. Formulate various techniques to solve power flow problems.
- 6. Analysis of various faults in power system network.
- 7. Analyze the impact of stability issues in power systems.
- 8. Develop the code and discuss the results obtained for load flow, short circuit and stability problems using software tools.

Module:1 Transmission Line parameters:

9 Hour

Resistance, Inductance of transmission lines, Inductance of a single phase two wire line, Inductance of three phase lines with symmetrical and unsymmetrical spacing-Capacitance of a single phase two wire line-Capacitance of a three phase line with symmetrical and unsymmetrical spacing.

Module:2 Modelling of Transmission lines:

6 Hours

Representation of lines-Short –Medium lines, Equivalent Circuits, Calculation of Voltage regulation and transmission efficiency- long transmission lines-Equivalent Circuit- Surge Impedance loading.

Module:3 Insulators and Cables:

5 Hour

Types, Potential distribution over a string of suspension insulators- Improvement of string efficiency-Underground Cables-Types- Grading in cables. **Distribution Systems:** A.C. distribution System-connection schemes-radial and ring main –Interconnected System.

Module:4 Network Modelling:

7 Hours

Need for system studies in planning and operation of power system-Per phase analysis of symmetrical three phase system-per unit representation-Bus Admittance Matrix-Equivalent circuit of transformer with off nominal tap ratio- Modeling of generator, load, shunt capacitor, transmission line, shunt reactor for power flow and short circuit studies.

Module:5 Power Flow Studies:

7 Hours

The power Flow Problem- Bus Classification-Derivation of Power Flow Equation, Newton Raphson and FDPF methods.

Module:6 Fault Analysis:

6 Hours

Approximations in Short Circuit Analysis, Calculation for radial networks-Symmetrical Short Circuit Analysis-Symmetrical Component Transformation- Zbus in phase frame and sequence frame-

- 1. To explain basic concepts of Power semiconductor devices
- 2. To analyze converters its load and drive interaction
- 3. To analyze speed control concepts of ac and dc drives, speed reversal, regenerative braking aspects, design methodology

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Explain basic concepts of power semiconductor devices including operating characteristics, firing circuits and protection circuits.
- 2. Design DC-DC and AC-DC power converters and estimate its performance as per the requirements and constraints specified.
- 3. Design various DC-AC and AC-AC converters.
- 4. Understand the basic concepts of electric drives including electrical and mechanical parameters.
- 5. Analyze power converter fed Separately Excited DC Motor Drive.
- 6. Analyze power converter fed Induction Motor Drive.
- 7. Analyze power converter fed Synchronous Motor Drive.
- 8. Design and analyze various converters for electric drives by conducting experiments

Module:1 Introduction to Power Semiconductor Devices:

6 Hours

Structure, and operating characteristics of power Diode SCR, power BJT, MOSFET and IGBT, SiC devices, Switching characteristics, Snubber designs, firing and protection circuits, basic concepts of PWM control and phase angle control.

Module:2 DC-DC & AC-DC Power Converter

7 Hours

2-pulse, 3-pulse and 6-pulse converters – performance parameters: harmonics, ripple, distortion, power factor – effect of source impedance and overlap- DC-DC chopper circuit using BJT and IGBT - problems, design and operation, control strategies.

Module:3 DC-AC & AC-AC Power Converter

6 Hours

Single phase, three phase Bridge inverters, Current source inverters, Multi-level inverter concepts, Single phase AC voltage controllers, AC chopper; single phase cyclo converters

Module:4 Fundamental concepts of Drives:

6 Hours

Fundamentals of Drive dynamics- Power and Torque - Efficiency and losses - Typical Operating Conditions - Reversing - Torque Control - Dynamic brake operation - Static brake operation - Motor Heating and Thermal monitoring -Rating of the Frequency Converters from Motor Specification - Overload Capacity - Control Range - Derating of Converters - Regenerative Energy - Motor Cables

Module:5 | Separately Excited DC Motor Drive:

6 Hours

Single phase and three phase converter fed D.C motor drive. Chopper fed drives, input filter design. Braking and speed reversal of DC motor drives using choppers.

Module:6 **Induction Motor Drives:** 6 Hours Speed Control Methods- variable voltage, V/f control, rotor resistance, pole changing, cascaded induction machines, slip power recovery - voltage source and current source inverter fed induction motor drives Module:7 **Synchronous Motor Drives:** 6 Hours Synchronous motor control – analysis with electronic commutation – concept of self-control – stator current control and marginal angle control Module:8 2 Hours **Contemporary issues:** 45 Hours **Total Lecture Hours** Text Book(s) 1. Pre-requisite	EEE3002	Syl	abu	s v	ers	ion
Anti-requisite	Nil				v.	2.0

- 1. To emphasis on the hardware functionality of Intel 8051 and ARM
- 2. To create the essential knowledge on operating modes of I/O ports ,Timers/Counters, control registers and various types of interrupts.
- 3. To analyse various interfacing techniques.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Interpret the architecture of microprocessor and classify the different modes of ARM.
- 2. Classify the instructions and differentiate the instruction under various categories
- 3. Solve real time problems using ARM
- 4. Explain the complete architecture of 8051 microcontroller
- 5. Identify suitable instructions and write programs using 8051 microcontroller
- 6. Examine various interrupts and write programs to handle interrupts
- 7. Design a microcontroller based embedded systems by interfacing external devices
- 8. Design and Conduct experiment using 8051 and ARM processor for various applications.

Module:1Introduction to ARM Processor4 HoursIntroduction to RISC processor – Comparison between CISC and RISC - Overview of ARM architecture – Different modes of ARM processor – Program status register

Module:2 ARM Instruction Set

3 Hours

Data transfer instruction – Arithmetic instruction – Logical Instruction – Multiply instruction – Branch instruction – Load/Store instruction – Swap instruction.

Module:3 Programming using ARM Processor

2 Hours

Solving an simple equation – generation of square wave form – Memory operations

Module:4 | **8051 Microcontroller Architecture**

4 Hours

Architecture of 8051 Micro controller – Program Status Register – Structure of Random Access Memory – Special Function Registers - Pin diagram of 8051 Microcontroller – Ports of 8051 microcontroller.

Module:5 Instruction set of 8051 microcontroller

3 Hours

Data transfer Instructions – Arithmetic and Logical Instructions – Boolean Instructions – Control transfer Instructions – Programming using 8051 microcontroller – Demonstration of HEX file generation and program execution.

Module:6 8051 Microcontroller Programming

5 Hours

Programming I/O ports - Different modes of timer programs - Counters - Transferring data serially - Receive data serially - Interrupts and Interrupt Handling - Interrupt priority

Anti-requisite	Nil	v.1.0					
0 01 4							

The course is aimed at

- 1. Presenting the elementary notions of Fourier series, which is vital in practical harmonic analysis
- 2. Imparting the knowledge of eigenvalues and eigen vectors of matrices and the transform techniques to solve linear systems, that arise in sciences and engineering
- 3. Enriching the skills in solving initial and boundary value problems
- 4. Impart the knowledge and application of difference equations and the Z-transform in discrete systems, that are inherent in natural and physical processes

Expected Course Outcome

At the end of the course the student should be able to

- 1. Employ the tools of Fourier series to find harmonics of periodic functions from the tabulated values
- 2. Apply the concepts of eigenvalues, eigen vectors and diagonalisation in linear systems
- 3. Know the techniques of solving differential equations
- 4. understand the series solution of differential equations and finding eigen values, eigen functions of Strum-Liouville's problem
- 5. Know the Z-transform and its application in population dynamics and digital signal processing

6. demonstrate MATLAB programming for engineering problems

Module:1Fourier series:6 hoursFourier series - Euler's formulae - Dirichlet's conditions - Change of interval - Half range

series – RMS value – Parseval's identity – Computation of harmonics

Module:2 Matrices: 6 hours

 $\label{lem:condition} \begin{tabular}{ll} Eigen values and Eigen vectors - Properties of eigenvalues and eigen vectors - Cayley-Hamilton theorem - Similarity of transformation - Orthogonal transformation and nature of quadratic form \\ \end{tabular}$

Module:3 Solution of ordinary differential equations: 6 hours

Linear second order ordinary differential equation with constant coefficients – Solutions of homogenous and non-homogenous equations - Method of undetermined coefficients – method of variation of parameters – Solutions of Cauchy-Euler and Cauchy-Legendre differential equations

Module:4 Solution of differential equations through Laplace transform and matrix method 8 hours

Solution of ODE's - Nonhomogeneous terms involving Heaviside function, Impulse function - Solving nonhomogeneous system using Laplace transform - Reduction of *n*th order differential equation to first order system - Solving nonhomogeneous system of first

order differential equations (X' = AX + G) and X'' = AX

Module:5 Strum Liouville's problems and power series Solutions: 6 hours

The Strum-Liouville's Problem - Orthogonality of Eigen functions - Series solutions of differential equations about ordinary and regular singular points - Legendre differential equation - Bessel's differential equation

The aim of this course is to present a comprehensive, compact and integrated treatment of two most important branches of applied mathematics for engineers and scientists namely the functions of complex variable and Partial differential equations in finite and infinite domains

Expected Course Outcome:

At the end of the course the student should be able to

- 1. Construct analytic functions and find complex potential of fluid flow and electric fields
- 2. Find the image of straight lines by elementary transformations
- 3. Express analytic functions in power series
- 4. Evaluate real integrals using techniques of contour integration
- 5. Analyze partial differential equations, and its applications, design the boundary value problems(one dimensional heat and wave equations) and find Fourier series, Fourier transform techniques in their respective engineering problems.

Module:1 | **Analytic Functions**

6 hours

Complex variable-Analytic functions and Cauchy – Riemann equations - Laplace equation and Harmonic functions - Construction of Harmonic conjugate and analytic functions - Applications of analytic functions to fluid-flow and Field problems.

Module:2 Conformal and Bilinear transformations

5 hours

Conformal mapping - Elementary transformations-translation, magnification, rotation, inversion. Exponential and Square transformations ($w = e^z$, z^2) - Bilinear transformation - Cross-ratio-Images of the regions bounded by straight lines under the above transformations.

Module:3 | Power series

4 hours

Functions given by Power Series - Taylor and Laurent series -singularities - poles - Residues.

Module:4 | Complex Integration

5 hours

Integration of a complex function along a contour - Cauchy-Goursat theorem- Cauchy's integral formula -Cauchy's residue theorem - Evaluation of real integrals - Indented contour integral.

Module:5 | Partial Differential equations of first order

6 hours

Formation and solution of partial differential equation - General, Particular, Complete and Singular integrals - Partial Differential equations of first order of the forms: F(p,q)=0, F(z,p,q)=0, F(x,p)=G(y,q) and Clairaut's form - Lagrange's equation: Pp+Qq=R.

Course Objectives		•					

The aim of this course is to

- 1. cover certain basic, important computer oriented numerical methods for analyzing problems that arise in engineering and physical sciences.
- 2. use MATLAB as the primary computer language to obtain solutions to a few problems that arise in their respective engineering courses.
- 3. impart skills to analyse problems connected with data analysis,
- 4.solve ordinary and partial differential equations numerically

Expected Course Outcome

At the end of the course the student should be able to

- 1. Observe the difference between exact solution and approximate solution.
- 2. Use the numerical techniques to find the solution of algebraic equations and system of equations.
- 3. Fit the data using interpolation technique and spline methods.
- 4. Find the solution of ordinary differential equations, Heat and Wave equation numerically.
- 5. Apply calculus of variation techniques to extremize the functional and also find approximate series solution to ordinary differential equations

Module:1	Algebraic and Transcendental Equations	5 hours
General iterative me	ewton – Raphson method-	
System of non-linear	r equations by Newton's method.	

Module:2	System of Linear Equations and Eigen	6 hours
	Value Problems	

Gauss —Seidel iteration method. Convergence analysis of iterative methods-LU Decomposition -Tri diagonal system of equations-Thomas algorithm- Eigen values of a matrix by Power and Jacobi methods.

Module:3 Interpolation 6 hours

Finite difference operators- Newton's forward-Newton's Backward- Central differences-Stirling's interpolation - Lagrange's interpolation - Inverse Interpolation-Newton's divided difference-Interpolation with cubic splines.

Module:4	Numerical Differentiation and Integration	6 hours
Numerical different	iation with interpolation polynomials-maxima	and minima for tabulated
values-Tranezoidal i	rule Simpsons 1/3rd and 3/8th rules -Romberg'	s method Two and Three

values-Trapezoidal rule, Simpsons 1/3rd and 3/8th rules. –Romberg's method. Two and Three point Gaussian quadrature formula.

Module:5 Numerical Solution of Ordinary 8 hours
Differential Equations

First and second order differential equations - Fourth order Runge - Kutta method. Adams-Bashforth-Moulton predictor-corrector methods. Finite difference solution for the second order ordinary differential equations.

- 1. Apply the design concepts of feed forward and feedback neural networks for solving Engineering problems
- 2. Select appropriate weight and learning constant values for every learning
- 3. Formulate and analyze the real time system with the knowledge of fuzzy logic control

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Design the mathematical model for single and multi-layer Perceptron for real time systems.
- 2. Demonstrate the concepts of feed forward and re-current neural networks to find the optimal solution.
- 3. Explore the concepts of Recurrent and feedback networks in multilayer neurons.
- 4. Design the competitive learning neural networks for solving the engineering problems.
- 5. Estimate the performance of Self organizing networks.
- 6. Design of fuzzy systems for non-linear simulation with extension principle.
- 7. Apply membership functions with suitable Defuzzification method and apply neuro-fuzzy inference system concepts to modern controllers.
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1 Introduction to Artificial Neural Networks and Learning Laws 7 Hours

Artificial neural networks and their biological motivation – Terminology – Models of neuron – Topology – Characteristics of artificial neural networks – Types of activation functions.

Learning Laws: Learning methods – Error correction learning – Hebbian learning – Perceptron – XOR problem – Perceptron learning rule convergence theorem – Adaline – Madaline.

Module:2 Feed Forward Networks

4 Hours

Multilayer Perceptron – Delta Learning – Back Propagation learning algorithm – Universal function approximation – Associative memory: auto association and hetero association.

Module:3 Recurrent Neural Networks

2 Hours

Bi-directional associative memory – Hopfield neural network – Travelling Salesman Problem.

Module:4 Unsupervised Learning

3 Hours

Competitive learning neural networks – Max net – Maxican Hat – Hamming net.

Module:5 | Self Organizing Networks

5 Hours

Kohonen Self organizing Feature Map – Counter propagation – Learning Vector Quantization – Adaptive Resonance Theory – Concept of support vector machines – Applications of neural networks in image processing, signal processing, modeling and control.

Module:6 Fuzzy Sets and Fuzzy Relations

5 Hours

Introduction – Classical sets and fuzzy sets – Classical relations and fuzzy relations – Membership functions – Fuzzy to Crisp conversion, Fuzzy Arithmetic, numbers, vectors and extension principle.

Module:7	Fuzzy Decision Making 2 Hours										
Fuzzy rule b methods.	ased systems – Fuzzy nonlin	near simulation – I	Fuzzy cont	rol systems and Defu	ızzification						
Neuro Fuzzy: Mathematical formulation of adaptive Neuro – Fuzzy inference systems.											
Module:8	Contemporary issues: 2 Hour

EEE1008	08 Bio-Medical Instrumentation						
		3	0	0	4	4	
Pre-requisite	Nil	Syllabus version					
Anti-requisite	Nil				V	. 2.0	

- 1. To give an understanding of the biological signals and signal acquisition
- 2. To provide the design concepts of bioelectric amplifiers
- 3. To learn the principle and operation of various biomedical systems

Expected Course Outcomes:

On the completion of this course the student will be able to:

- 1. Evaluate and analyse the different physiological signals
- 2. Relate the knowledge to select appropriate medical instruments
- 3. Design the bio electric devices used for diagnostic equipment
- 4. Develop and analyse the therapeutic devices.
- 5. Understand the procedure for blood analysis in medical laboratory
- 6. Analyze the process involved in blood cell counters and sensors
- 7. Differentiate the advanced diagnostic techniques.
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1 Introduction to Biomedical Instrumentation and Measurement 8 Hours

Sources of bioelectric potentials, cardiovascular system, Central nervous system, Muscular System, linear/nonlinear analysis of different physiological signals (ECG, EEG, EMG), Electrode theory-mathematical analysis including Nernst equation, Goldman equation, Electrical conductivity of electrode, Electrodes for ECG, EEG &EMG.

Module:2 | General Considerations of Medical Instruments

8 Hours

Operational Amplifiers, Bioelectric Amplifiers, Selection of biomedical amplifiers – Isolation amplifiers, Charge amplifiers and Chopper amplifier. Characteristics of biomedical recorder amplifiers, Physiological effects of electric currents, Electric shock hazards and leakage currents, Methods of accident prevention.

Module:3 | Diagnostic Equipment

7 Hour

ECG Lead Configuration, Vector cardiograph, Phono-cardiograph, EEG and EMG Electrode system, Recorders, Measurement of various volumes/capacity of lungs, Spirometer. Measurement of cardiac output, blood flow and blood pressure.

Module:4 Therapeutic Equipment

6 Hours

Cardiac pacemakers, cardiac defibrillators, nerve & muscle stimulators, diathermy-types, ventilators, Dialyzer.

Module:5 | Medical Laboratory Instrumentation

5 Hours

Analysis of Blood-Measurement of pH, pO2 and pCO2 value of blood using pH/gas analyzers

Module:6 Medical Laboratory Measurement

4 Hours

Photometers, Hematology, Blood cell counters, Electrophoresis- Serum detection and classification, Blood Glucose Sensors, GSR measurements.

EEE1011	Automated Test Engineering	L	T	P	J	C	
		2	0	2	0	3	
Pre-requisite	EEE3002	Syllabus versio					
Anti-requisite	Nil				v.	1.0	

- 1. Aims to provide knowledge about the testing of IC's using automated Testing Equipment (ATE).
- 2. Providing hands-on in Simulation software's used to simulate the evaluation conditions.
- 3. Practical knowledge imparted on LabVIEW usage in PCBA testing for its full functional behaviour

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Discover the component faults in electronic manufacturing
- 2. Classify the faults in PCBs
- 3. Analyze the practical skills involved in troubleshooting
- 4. Test the various parameters involved in automated test engineering
- 5. Distinguish the Boundary Scan and Board Testing
- 6. Conduct the experiments on automated testing techniques

Module:1 Introduction to PCB Assemblies:

3 Hours

Printed Circuit Board (PCB)-types of PCB-multilayer PCBs-Plat Plated though Hole Technology - Surface Mount Technology (SMT) – Ball Grid Array (BGA) Technology – PCB Bare board manufacturing process – Bare board testing– PCB Inspection methods – Visual, Optical and X-ray Inspection systems– Electrical tests in PCBs

Module:2 PCBA Troubleshoot Methods:

2 Hours

PCB assembly troubleshoot – locating faults & Manual troubleshoot – Online & Offline troubleshoot – Fault types and causes in circuits – Tools and instruments for usage – DMM(Digital Multimeter) – CRO (Cathode Ray Oscilloscope) - Logic probes – Logic pulser – Logic Analyzer.

Module:3 PCBA Troubleshoot Methods:

2 Hours

Automated Testing of PCBs – Out-circuit & In-circuit test methods – VI Trace Technique – signature analysis – Board Functional Testing Techniques– Boundary Scan Test Strategy & methods – External Instrumentation in Automated Testing – PCB diagnostic testers – Diagnostic Testing technique.

Module:4 Automated Test Techniques:

5 Hours

Automated Test Techniques – Various parameters – AC – DC Parametric testing– QA testing– Identify and troubleshoot the failures of parameters– Environmental, Electrical Standards & Requirements for IC testing – In-circuit Testing methodologies – Back Driving – functional test– Digital, Analog and Mixed Signal ICs– Guarding Technique – VI Trace Technique of components – Boundary Scan Test for components on board – In-circuit measurement of passive components –

Kelvin measurement – Test Fixtures – Types of Test Fixtures – Bed of Nails Fixtures – Card Edge Test Fixtures – Reverse Engg to rebuild the Schematic Diagram using ATE and Software.

Module:5 Board Functional Testing	g (BFT):		6 Hours					
Board Functional Test (BFT) techniques	- Go-No-go Test	– Cluster Test –	Guided Probe					
Backtracking Technique - Simulators -								
Comprehensiveness of Board program - F	Fault Dictionary— A	nalysis - BS and	Non-BS device					
testing- BCSS- Interface adaptor or persor			-					
testing – External Instrumentation used for	board testing – PX	I Instrumentation -	- Integration of					
PXI instruments.								
Module:6 DFT:			4 Hours					
Design for testability (DFT)- test issues – Fa	ult Models — Boun	dary Scan Test– Se	lf Test design –					
ATE for test.		J	J					
Module:7 DFM:			6 Hours					
Design for manufacturability (DFM) - Manuf	<u> </u>		-					
- strategies - new strategy for DFM - benefit	ts of new strategies -	- ATE for manufac	eturing – Various					
applications.

- 1. To understand the basic concepts involved in Nanoscience
- 2. To gain knowledge about various methods of synthesis, characterization and applications in Nanotechnology.

Expected Course Outcomes:

On the completion of this course the student will be able to:

- 1. Understand the fundamental aspects of nanoscience
- 2. Identify various types of nanomaterials, their properties and applications
- 3. Compare the different nano fabrication processes
- 4. Synthesize and understand the properties & application of Carbon Nanotubes
- 5. Characterize nanoscale particles using various characterization techniques
- 6. Understand the limitations of current technology and advancements of nanoscale electronic devices
- 7. Apply nanotechnology in photonic devices

Module:1 Basic Concepts

8 Hours

Basic properties of Conductors, Insulators and Semiconductors; Band diagram concept of typical semiconductors; Basic Chemistry Concepts; Physical aspects, Bonding, Wave-particle duality, Heisenberg Uncertainty Principle, Schrödinger wave equation, Quantum confinement in 1-D, 2-D and 3-D; Effects of the nanometer length scale- Change in properties.

Module:2 Nanomaterials

6 Hours

Basic Types of Nanostructures- Quantum wells, Quantum Wires-Carbon Nanotubes, Nanowires; Quantum Dots, Nanoclusters; Nanoparticles- Colloidal nanoparticle crystals, Functionalized nanoparticles

Module:3 | Fabrication Methods

5 Hours

Top-down processes, Bottom-up processes, Nanolithography techniques, Arc discharge method, Laser Ablaton method, Ion Implantation, Chemical Vapour deposition.

Module:4 Carbon Nanotubes & its applications

6 Hours

Synthesis of CNTs, Electronic properties, Mechanical properties; Applications- CNTs as interconnects, CNTFETs, CNTs for solar cell and energy storage applications

Module:5 Characterization Techniques

8 Hours

Classification of characterization methods, Different Microscopy techniques-Light Microscopy, Principle & Resolution, Electron Microscopy- Scanning Electron Microscopy (SEM), Principle & Resolution, Scanning Probe Microscopy- Scanning Tunneling Microscopy (STM) & Atomic Force Microscopy (AFM), Principle & Resolution.

Module:6 Nanoelectronics

5 Hours

Si Technology and its limitations, Nanoscale Devices, Single Electron Devices, Organic Field-effect transistors, Spintronics.

EEE1020	Engineering Optimization	LT	P J C
		2 2	0 4 4
Pre-requisite	Nil	Syllab	us version
Anti-requisite	Nil		v. 1.1
Course Objectiv	es:		
1. Exposur	e to and learning of engineering optimization concepts applied	across the sp	ectrum of
courses in	n engineering curriculum		
Expected Course	e Outcome:		
On the completio	n of each module the student will be able to:		
_	d the basic concepts of engineering optimization techniques		
	he 1- D search methods		
Design gr	adient based optimization method for various algorithms		
4. Formulate	algorithms using conjugate direction methods		
5. Analyze d	ynamic optimization techniques.		
6. Explore g	radient-free optimization techniques and its limitations		
Module:1 Cla	assical Optimization basics		7 Hours
Taylor's series, S	ingle-variable optimization, Multivariable optimization withou	t and with ed	quality and
inequality constra	ints, Definitness of matrices, Sylvester's criterion, Convex prog	gramming pı	oblem.
Module:2 1-I	Search methods		5 Hours
Golden Section S	earch Fibonacci Search Inexact line search		

Golden Section Search, Fibonacci Search, Inexact line search.

Module:3 Gradient based optimization

7 Hours

Gradient descent method, method of steepest descent, Newton's Method, Levenberg-Marquardt algorithm.

Module:4 Conjugate Direction Methods:

7 Hours

Conjugate directions and conjugate gradient method, Fletcher-Reeves formula. Convergence analysis of all algorithms.

Module:5 | **Miscellaneous topics**

6 Hours

Dynamic programming. Dynamic optimization. Sample applications of gradient based and gradient free methods in engineering.

Module:6 Application of optimization methods to neural networks

5 Hours

NN basics, capabilities and limitations of single perceptron, multilayer perceptron. Training by gradient based and gradient free methods.

Module:7 Gradient-free Optimization

6 Hours

Direct and indirect methods, Limitations of gradient based methods, metaheuristic algorithms, Introduction to the genetic algorithm, particle swarm optimization. Simulated annealing.

0 01 4							

- 1. To equip students with the knowledge of analog and digital communication engineering fundamentals.
- 2. To teach the students various communication systems and its analysis & applications
- 3. To provide basic understanding of appropriate tools and technologies to develop communication-engineering solutions.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Demonstrate the need for modulation.
- 2. Examine the presence of noise in communication systems.
- 3. Analyze modulation techniques for analog and digital Signals.
- 4. Design transmitters and receivers for communication systems
- 5. Assess various shift keying techniques.
- 6. Demonstrate spread spectrum techniques and channel assignment strategies.
- 7. Analyze and design modern communication systems.
- 8. Design and Conduct experiments, as well as analyze and interpret data

Module:1 Introduction to Communication System

6 Hours

Communication systems: Introduction, need, importance, elements, block diagram and role of each block, types, frequency ranges – bandwidth– pre-emphasis and de-emphasis –modulation and its need– applications of electronic communications.

Module:2 Noise in CW Modulation System

4 Hours

Internal noise – external noise – noise voltage – signal-to-noise ratio – noise figure – noise temperature – noise in CW modulation systems.

Module:3 Amplitude Modulation

8 Hours

Representation and generation of analog modulation systems including AM, SSB, DSB,VSB – frequency spectrum, power relation—different types of modulators – AM transmitter: low level and high level modulation – SSB transmitter – AM demodulators: Square-law detector, envelope detector, rectifier detector, synchronous detector – characteristics of receivers – Super heterodyne principle – AM super heterodyne receiver – SSB receiver – comparison of different AM systems.

Module:4 | Phase Modulation:

10 Hours

Representation and generation of frequency and phase modulation (FM and PM) – generation of NBFM and WBFM – FM transmitters – comparison of AM and FM – comparison of FM and PM – conversion of FM to PM and PM to FM – TRF Receivers – Choice of IF and oscillator frequencies – AVC – AFC – FM super heterodyne receiver – slope detectors – HF Communication Receiver – diversity reception.

Module:5 Pulse Modulation Systems

5 Hours

Pulse modulations— sampling theorem — pulse amplitude modulation— pulse width modulation — pulse position modulation — signal to noise ratio of pulse modulation systems — delta modulation —

Pre-requisite EEE2003	Syllabus version										
Anti-requisite Nil	v. 1.0										
Course Objectives:											
1. Apply theoretical concepts in designing electrical machines.											
2. Select appropriate values for designing electrical machines.	. Select appropriate values for designing electrical machines.										
3. Estimate the machine performance based on the design outcome by data interpretation											

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Determine electric and magnetic field strengths and their effects in and around electrical machinery, including effects of magnetic induction on moving parts.
- 2. Design stator and rotor parts of the d.c machines and predict the performance of DC machine using design values.
- 3. Design a transformer and estimates its performance as per the requirements and constraints specified.
- 4. Design the stator and cage rotor of an Induction machine.
- 5. Design the wound rotor of induction machine.
- 6. Calculate the main dimension and air gap length of Synchronous Machines.
- 7. Design the stator and cage rotor of Synchronous Machines.
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1 Magnetic Circuits and Cooling of Electrical Machines: 4 Hours

Concept of magnetic circuit – MMF calculation for various types of electrical machines – real and apparent flux density of rotating machines – leakage reactance calculation for transformers, induction and synchronous machine - thermal rating: continuous, short time and intermittent short time rating of electrical machines-direct and indirect cooling methods – cooling of turbo alternators

Module:2 D.C. Machines 5 Hours

Constructional details – output equation – main dimensions - choice of specific loadings – choice of number of poles – armature design – design of field poles and field coil – design of commutator and brushes – losses and efficiency calculations.

Module:3 Transformers 5 Hours

Constructional details of core and shell type transformers – output rating of single phase and three phase transformers –design of core, yoke and windings for core and shell type transformers – equivalent circuit parameter from designed data – losses and efficiency calculations – design of tank and cooling tubes of transformers.

Module:4 Squirrel Cage Induction Motors 4 Hours

Constructional details of squirrel cage motor – output equation – main dimensions – choice of specific loadings – design of stator – design of squirrel cage rotor – equivalent circuit parameters from designed data – losses and efficiency calculations.

3 Hours Module:5 **Slip Ring Induction Motors** Constructional details of slip ring motor – output equation – main dimensions – choice of specific loadings – design of stator – design of slip ring rotor – equivalent circuit parameters from designed data – losses and efficiency calculations. slip ring design - effect of skewing Module:6 4 Hours **General Aspects of Synchronous Machines** Constructional details of cylindrical pole and salient pole alternators – output equation – choice of specific loadings – main dimensions – short circuit ratio 3 Hours Module:7 **Design of Synchronous Machines** Design of Synchronous Machines: of stator and rotor of cylindrical pole and salient pole machines design of field coil - performance calculation from designed data - introduction to computer aided design. Module:8 **Contemporary issues:** 2 Hours **Total Lecture Hours** 30 Hours Text Book(s) A.K. Sawhney, 'A Course in Electrical Machine Design', Dhanpat Rai and Sons, New S.K. Sen, 'Principles of Electrical Machine Design with Computer Programmes', Oxford 2. and IBH Publishing Co. Pvt Ltd., New Delhi, 2010. **Reference Books** R.K. Agarwal, 'Principles of Electrical Machine Design', S.K.Kataria and Sons, Delhi, 2012. 2. V.N. Mittle and A. Approved by Academic Council

EEE3006	1										
Pre-requisite	Pre-requisite EEE2003 S										
Anti-requisite	Nil	v.1.0									
Course Objectives	S:	-									
1. To impart k	nowledge on special type electrical machines and their importa	ance.									

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Understand the properties of permanent magnetic materials
- 2. Analyze the performance of stepper motor and design its controller
- 3. Distinguish switched reluctance motor from synchronous reluctance motor
- 4. Analyze square wave and sine wave permanent magnet brushless motor drives.
- 5. Comprehend various linear motors
- 6. Analyze the advanced synchronous motor
- 7. Select the appropriate drive for controlling the operations of special electrical machines

Module:1 Stepper Motors: 6 Hours

Constructional Features-principle of operation types and torque equations-modes of excitation, characteristics, driver circuits, and microprocessor control of stepper motors, concept of lead angle, applications.

Module:2 | Switched Reluctance Motors: 7 Hours

Constructional feature – principle of operation – torque production –Power converters and their controllers – methods of rotor position sensing sensor less operation-characteristics- closed loop control applications.

Module:3 Synchronous Reluctance Motors:

6 Hours

Constructional feature -Axial and Radial flux motor- operating principles-voltage and torque equation – Phasor diagram --performance characteristics -applications.

Module:4 Permanent Magnet Brushless DC Motors:

7 Hours

Permanent Magnet materials-Magnet Characteristics-Permeance coefficient-Permanent magnet Vs. Electromagnet. Magnetic circuit analysis – EMF and torque equations – Commutation – Power Converter and their controllers – Characteristics – Applications.

Module:5 Permanent Magnet Synchronous Motors:

7Hours

Principle of operation-Ideal PMSM -EMF and Torque equations-Armature MMF--Synchronous reactance-sine wave motor with practical windings-phasor diagram-characteristics- power converter and their controllers-converter volt ampere requirements-applications.

Module:6 Advanced Synchronous Machines:

4 Hours

Flux switching motors-flux reversal motors-claw pole alternators-construction and working-characteristics-applications.

Module:7 Linear Motors: 6 Hours

Linear DC motors-Linear induction motor-linear synchronous motors-linear switched reluctance motors-constructions and working-applications.

Line Start Synchronous Motors: Line start permanent magnet synchronous motor - line start synchronous reluctance motor - line start permanent magnet synchronous reluctance motor - applications.

EEE3007	Finite Element Analysis for Electrical Machines	L	T P 0 0	J	C 3
Pre-requisite	EEE2003	Syllab	ous ve	ersi	ion
Anti-requisite	Nil			v.	1.0
0.1.1.41					

- 1. To expose the students to the concept of finite element analysis
- 2. To study the basic electromagnetic theory and its importance to electrical machines
- 3. To design any electro-magnetic devise
- 4. To perform electromagnetic analysis using finite element methods
- 5. To do electromagnetic coupled thermal analysis
- 6. To do electromagnetic coupled structural analysis

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Expose the students to the concept of finite element analysis
- 2. study the basic electromagnetic theory and its importance to electrical machines
- 3. Study the performance assessment and improvement in electrical machines.
- 4. Perform electromagnetic analysis using finite element methods
- 5. Analyze coupled field circuits
- 6. Use machine tools to find torque and errors
- 7. Optimize the air gap region to improve the performance of the electrical machine
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1	Outline of Electromagnetic Fields:		4 Hours
Vector Analy	ysis - Electromagnetic Fields - Fundamental Equation	ons.	
Module:2	Principles of Finite Element Methods:		5 Hours
Field Proble	ms with Boundary Conditions - Classical Method	d for the Fiel	d Problem Solution -
Classical Re	sidual Method - Classical Variational Method - Finit	te Element Me	ethod.
Module:3	Computation of Losses:		2 Hours
Computation	of Eddy Current Loss - Losses in Winding.		
Module:4	Computation of Resistance and Inductance:		4 Hours
Inductance a	nd Reactance - Poynting Vector - Nonlinear Probler	ns.	
Module:5	Analysis of Electrical Machines Using Finit Method -I:	e Element	4 Hours
Method - Vi	rce Law - Boundary Conditions - Computation of the rtual Work Method - Using Machine Models to fin a - Convergence of Force.		
Module:6	Analysis of Electrical Machines Using Finite Element Method:-II		5 Hours
Using Mach	nine Models to find Torque - Errors in Force Compu	tation - Conve	ergence of Force.
Module:7	Air-gap Elements for Electrical machines:		4 Hours
	- Description of the air gap element method - Finite oupling Scheme – Applications.	Element Disc	cretization - Analytical
Module:8	Contemporary issues:		2 Hours

	Vellore Institute of Technology (Deemed to be University under section 3 of UGC Act, 1956)	
EEE4002	Power System Protection and Switchgear	L T P J C 3 0 2 0 4
Pre-requisite	EEE3003	Syllabus version
Anti-requisite	Nil	v. 1.0
Course Objective	s:	
1. Apply theoretic	cal concepts in designing relays and circuit breakers.	
2. identify approp	priate switch gears for providing protection to power system co	omponents.
3. analyse the perconditions.	erformance of the protection schemes during both pre-fault	and post-fault
Expected Course	Outcome:	
On completion of t	the course the student will be able to	

tion of the course the student will be able to

- 1. Apply the symmetrical components method for analyzing the different types of faults
- 2. Identify appropriate protection scheme to provide protection to different power system components.
- 3. Design relays used in the protection schemes
- 4. Analyze the types of relays based on their characteristics
- 5. Sketch the various types of circuit breakers
- 6. Discuss the various ratings of the circuit breakers
- 7. Identify an appropriate type of circuit breaker based on voltage and current ratings in the system
- 8. Design and Conduct experiments, as well as analyze and interpret data.

Module:1 **Introduction to Faults and Protection:** 6 Hours Electrical faults - nature and causes of faults - types of faults - fault current calculation using symmetrical components - Principles and need for protective schemes - Equipment earthing and neutral grounding.

Module:2 **Protective Relays** 6 Hours Basic properties of relay - Electromagnetic relays - Over current, directional - Static relays.

Module:3 **Different Protection Schemes** 5 Hours

Applications of instrument transformers in protection schemes, Differential protection, Distance protection – other schemes of protection- Under frequency relays and Negative sequence relays

Module:4	Protection	of	transformer,	generator	and	6 Hours
	motor:					

Differential scheme for protection of transformer, generator, motor.

Module:5 **Protection of bus bars, transmission lines:** 6 Hours

Protection of bus bars-Application of differential scheme for bus bar protection, Transmission lines protection using distance scheme.

6 Hours Module:6 **Theory of Circuit Interruption:**

Physics of arc phenomena and arc interruption. Restriking voltage & Recovery voltage, rate of rise of recovery voltage, resistance switching, current chopping and interruption of capacitive current – DC circuit breaking.

Module:7 Circuit Breakers: 8 Hours

Difference between circuit breakers and isolators- making and breaking capacity - Types of Circuit Breakers - Air blast, Air break, Oil, SF6 and Vacuum circuit breakers- comparative merits of different circuit breakers - Testing of circuit breakers. Earth leakage circuit breakers and

EEE4003	Generation and Utilization of Electrical Energy	L	T	P	J	C
		2	0	0	4	3
Pre-requisite	EEE3003	Sylla	bus	ve	rsi	on
Anti-requisite	Nil				v.	1.0

- 1. Analyze the concepts and phenomenon of different sources of Power Generation.
- 2. Discuss the fundamental concepts in traction and comprehend different issues related to heating and welding.
- 3. Design the illumination and to discuss various Tariff methods for optimum utilization of electrical energy.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Identify and critically evaluate the generation and demand scenario worldwide
- 2. Discuss various sources for the generation of electrical power
- 3. Design the different types of electric illumination for indoor and outdoor area.
- 4. Discuss various types of Electric Traction based on the motors used and mechanics of train movement.
- 5. Analyze energy consumption and tariff rates.
- 6. Evaluate the energy conservation and identify the economic choice of equipment.
- 7. Design the heating elements for various application and discuss about the process of welding.
- 8. Design a component or a product applying all the relevant standards with realistic constraints.

Module:1 Introduction:

Generation and demand-worldwide scenario- Types of Conventional and nonconventional sources, Energy sources and their availability in India, Introduction to the concept of distributed generation and effect on system operation.

2 Hours

Module:2 Generation from non-renewable sources: 3 Hours

Power generation from non-conventional sources -layout and working of steam, diesel, low and high head hydro power plants-pumped storage plants- nuclear plants.

Module:3 Generation from renewable sources: 5 Hours

Need for alternate energy sources—Power generation from tidal, wind, magneto hydro dynamics (MHD), geothermal and solar sources-solar thermal and solar photovoltaic, Fuel cells.

Module:4 Economic Generation and Utilization: 5 Hours

Comparison between AC and DC systems for transmission efficiency, Load and load duration curve, demand and diversity factors, Plant capacity and plant use factors, choice of type of generation, choice of size and number of unit cost of energy generated, Tariffs-KW demand constant and KVA demand constant. Introduction to Energy conservation –Economic choice of

equipment-Tools for Energy auditing, Causes of low power factor-methods of improving power factor, Case studies.

Module:5 | Illumination: 5 Hours

Nature of radiation, definition, laws, photometry, lighting calculations, design of illumination systems (for residential, industrial, commercial, health care, street lightings, sports, administrative complexes), types of lamps-energy efficiency comparison.

Module:6 | **Heating and Welding:**

4 Hours

Methods of heating, requirement of heating material, design of heating element, Types, Applications-furnaces, Ovens, , welding generator, welding transformer and its characteristics, welding types.

Module:7 | **Electric Traction:**

4 Hours

Introduction, requirements of an ideal traction system, supply systems for track electrification, types of traction system and comparison, mechanics of train movement, traction motors and control, multiple units, braking, current collection systems and recent trends in electric traction.

Modul	e:8 Contemporary issues:	2 Hours
	Total Lecture Hours	30 Hours

		3	0	0	4	4
Pre-requisite	EEE3004	Sylla	ıbu	s v	ers	ion
Anti-requisite	Nil		•	•	v.	1.1

- 1. Obtain knowledge of different distributed generations, energy storage devices and Microgrid system.
- 2. Understanding the concepts of system development and relevant issues.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Understand the need for DG's and various types
- 2. Understand the synchronization of distributed resources such as energy storage and fuel cell
- 3. Comprehend the issues of interfacing DG's in regulatory market
- 4. Understand the types of microgrid and its configuration
- 5. Apply power electronic equipment's in Microgrid and acquire the knowledge of multifunction grid connected converters
- 6. Analyze the various types of control in micro grid in islanded and grid connected mode
- 7. Apply energy management concept in grid connected and islanded microgrid
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1 Introduction to Distributed Generation 7 Hou

DG Units - Micro turbines, reciprocating engines, wind generators, photovoltaic generators, fuel cells, biomass, and tidal sources - Need for Distributed generation, renewable sources in distributed generation, current scenario in Distributed Generation, Planning of DGs – Siting and sizing of DGs – optimal placement of DG sources in distribution systems.

Module:2 Grid integration of DGs 6 Hours

Synchronization - Different types of interfaces - Inverter based DGs and rotating machine based interfaces - Aggregation of multiple DG units - Distributed resources to electric power systems: IEEE 1547. Energy storage elements: Batteries, ultra-capacitors, flywheels.

Module:3 Economics and Regulatory Aspects of DGs 6 Hours

Selection of sources, regulatory standards/ framework, Standards for interconnecting DG installation classes, security issues in DG implementations. Economic and control aspects of DGs –Market facts, issues and challenges - Limitations of DGs.

Module:4Introduction to Microgrid5 HoursMicrogrid Configurations – CERTS Microgrid Test Bed – DC Microgrid-HFAC Microgrid –LFAC

Microgrid Configurations – CERTS Microgrid Test Bed – DC Microgrid-HFAC Microgrid –LFAC Microgrid – Hybrid DC- and AC- Coupled Microgrid

	(Deeme	ed to be University under section 3 of U	GC Act, 1956)	
Module:5	Power Electronics in Micro	rogrid		6 Hours
Power Elect	ronics based Microgrid - G	rid Connected Mod	de – Isla	nded mode – Battery Charging
mode – desig	gn of parallel inverters – Mic	rogrid application -	Brick B	isses Software Frame work.
Module:6	Control in Microgrid			7 Hours
Impact of lo	oad characteristics – Loca	al control – Centra	alized Co	ontrol- Decentralized Control-
	control for islanded open			Droop control methods -
Frequency/V	oltage Control – Control of l	Inverter Output Imp	edance.	
Module:7	Microgrid Energy Manag	<u> </u>		6 Hours
	_	_		Microgrid - Stand-alone - Grid
connected -	energy storage - Voltage Cor	ntrol and Active Pov	wer Man	agement.

EEE4005	Power System Operation and Control	L T P J C 2 0 0 4 3
Pre-requisite	EEE 3003	Syllabus version
Anti-requisite	Nil	v. 1.0

- 1. This course will provide the student with power generation systems, their operation in an economic mode and their control.
- 2. Introduce students to the important terminal characteristics for hydroelectric and thermal power generation systems.
- 3. Introduce current topics in the system development and methods are used in modern control systems for power system network.

Expected Course Outcome:

On successful completion of the module, students will be able to:

- 1. Analyze the basic structure of power system and the effect of load characteristics on system operation
- 2. Analyze key managerial issues in operating states of the power system
- 3. Model AGC and ALFC mathematically
- 4. Analyze the relationship between voltage and reactive power.
- 5. Explain the constraints in unit commitment problem and issues to be addressed in the solution of unit commitment problem.
- 6. Formulate the model for operating cost of fossil-fuel plants and solve the economic dispatch problems
- 7. Understand Energy Management System
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1 Power System Performance

2 Hours

System load characteristics, load curves, load-duration curve, load factor, diversity factor. Reserve requirements: Installed reserves, spinning reserves, cold reserves, hot reserves.

Module:2 | Power System Operation

4 Hours

Load forecasting, unit commitment, load dispatching. Governor control, LFC, EDC, AVR, system voltage control, security control.

Module:3 Automatic Generation Control

7 Hours

Speed-load characteristics, Load sharing concept of control area, LFC control of a single-area system: Static and dynamic analysis of uncontrolled and controlled cases, Economic Dispatch Control, Multi-area systems modeling, static analysis, uncontrolled case and tie line with frequency bias control of state variable model

Module:4 Automatic voltage control

7 Hours

Typical excitation system, modeling, static and dynamic analysis, stability compensation, generation and absorption of reactive power, Relation between voltage, power and reactive power; Injection of

reactive power and MVAR injection of switched capacitors-maintain voltage profile - minimize transmission loss.

Module:5 **Unit Commitment(UC)** 3 Hours Unit Commitment (UC) constraints in UC, spinning reserve, thermal, hydro, fuel and other constraints, UC solution methods, Priority-list methods, forward dynamic programming approach, numerical problems. **Module:6 Economic Dispatch (ED)** 2 Hours Incremental cost curve, co-ordination equations without loss and with loss, solution by direct method and λ-iteration method, Base point and participation factors and Economic dispatch controller with LFC control Module:7 **Energy Management System** 3 Hours Energy control, Monitoring, data acquisition and control, System hardware configuration, SCADA and EMS functions, Network topology determination, state estimation, security analysis and control, Various operating states: Normal, alert, emergency, in extremis and restorative, State transition diagram showing various state transitions and control strategies Module:8 **Contemporary issues:** 2 Hours 30 Hours **Total Lecture Hours** Text Book(s) D P Kothari, I J Nagrath, "Modern Power System Analysis", Publisher Name, 3rd Edition, 1. 2. Allen.J.Wood and Bruce F.Wollenberg, 'Power Generation, Operation and Control', 3rd/e, John Wiley & Sons, Inc., 2013. **Reference Books** PSR Murthy, 'Operation and Control in Power Systems', BS Publications; Leiden: CRC 1 Press, cop. 2011. EEE4006	Restructured Power Systems	L	T	P	J	C
		3	0	0	0	3
Pre-requisite	EEE 3003	Syll	abı	is v	er	sion
Anti-requisite	Nil				V	. 1.0

- 1. This course will provide the student with an overview of the restructuring and different restructuring models.
- 2. Explain the students to stranded costs, market operations, and transmission pricing and congestion management.
- 3. Introduce the various restructuring models of power systems
- 4. Introduce the restructuring process taken place in international scenario with pricing concepts.
- 5. Introduce the current scenario of deregulation in Indian Power sector.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Identify the need of restructuring / deregulation in power system network.
- 2. Explain the technical and Non-technical issues in deregulated power exchange market.
- 3. Explain and specify the various pricing mechanisms in electrical power sector
- 4. Analyze the congestion management, stability aspects, and power quality issues in deregulated environment.
- 5. Design the market architecture and power market aspects
- 6. Develop effective and efficient market pricing schemes followed in Indian power sector.

Module:1 Power System Restructuring 3 Hours

Typical Structure of a deregulated electricity system ,Comparison with Vertically integrated electric utility, Motivaton for restructuring of power system-Different entities-Benefits from a competitive environment.

Module:2 Operations in Power Market 5 Hours

Restructuring Models-poolco, bilateral, hybrid models-ISO, Role of ISO, Power exchange-Market Clearing Price-Single Auction and Double Auction Power Pool.

Module:3 Transmission and Congestion Pricing 6 Hours

Transmission Pricing, Transmission cost allocation methods: Postage stamp rate method, contract path method, MW Mile method with examples, Congestion Pricing, Congestion pricing methods, Transmission rights.

Module:4	Congestion Management	6 Hours
----------	-----------------------	---------

Management of Inter-zonal and intra-zonal congestion, solution procedure, Formulation of Inter-zonal congestion sub problem with examples, Formulation of Intra-zonal congestion sub problem

			to be University under section 3 of

Pre-requisite	EEE3003	Sylla	bus ve	ersi	on
Anti-requisite	Nil			v.	1.0
Q 01 ' 4'					

1. The course aims to make the students familiar with the preparatory work necessary for meeting the next day's operation and the various automatic control actions to be implemented on the system to meet the Minute-to-minute variation of system load in power systems.

Expected Course Outcome:

On completion of the course the student will be able to

- 1. Outline the function of Energy Management System(EMS) and load flow methods
- 2. Diagnose the factors influencing fuel scheduling.
- 3. Solve hydro thermal coordination and load scheduling
- 4. Analyze the techniques for power/energy interchange and apply the wheeling concept in deregulated Environment.
- 5. Apply state estimation techniques in power system prediction/analysis.
- 6. Discuss the SCADA architecture and functional requirements
- 7. Apply the SCADA concept in power system automation.

Module:1 Overview of Load Flow Methods

Energy Management Centres and their functions – Recent Developments.

Module:2 | **Economic Dispatch**

6 Hours

6 Hours

Take or pay Fuel supply contract – Composite Generation and solution – Fuel scheduling Problems.

Module:3 Hydrothermal Coordination

7 Hours

Short term hydro scheduling – Pumped storage hydro plant. Unit Commitment – Solutions techniques of unit commitment.

Module:4 Interchange of power and energy

6 Hours

Interchange of power and energy, Economic aspects, Energy Interchange with unit commitment, Power Pool, Transmission effects and Issues, Wheeling, Transaction involving non-utility Parties.

Module:5 | State Estimation

7 Hours

Need for State estimation, Power System State Estimation, Maximum likely hood concept, Weight list Square state estimation (WLS), WLS by DC Analysis, Concept of observability, problems.

Module:6 | Supervisory Control and Data Acquisition

6 Hours

Introduction to Supervisory Control and Data Acquisition - SCADA Functional requirements and Components - Structure of a SCADA communication Protocol - General features, Functions and Applications, Benefits.

Pre-requisite	EEE3003	Syllab	us versio	n
Anti-requisite	Nil		v. 1.	.0
0 011 41				

- 1. Discuss and analyze the various breakdown mechanisms in gaseous, liquid and solid dielectrics
- 2. Design high voltage, high current and impulse generators
- 3. Analyze the various methodologies for high voltage, high current and impulse voltage measurement
- 4. Explain the various types of over-voltages in power system and methods for insulation coordination of power apparatus

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Discuss and analyze various types of electrical stress control techniques in gas and vacuum insulation systems
- 2. Derive and analyze the expression of current growth and breakdown voltage
- 3. Derive and analyze the various mechanisms of breakdown in liquid and solid dielectrics breakdown
- 4. Identify the various methodologies for high voltage and high current generation
- 5. Design high voltage direct current, alternating current and impulse generators
- 6. Analyze the various types of high voltage and high current measurement techniques
- 7. Evaluate the impact of various insulation tests of electrical power apparatus

Module:1 High voltages in electrical systems and electric stress: 6 Hours

Levels of High voltage – Electrical insulation and Dielectrics – importance of electric field intensity in the dielectrics – Electric field stresses – gas / vaccum as insulator - estimation and control of electric stress – Surge voltage their distribution and control.

Module:2 Conduction and breakdown in gases 6 Hours

Gases as insulating media - Collision Processes – Ionization Processes – Townsend's current growth equation – Current growth in the presence of secondary processes - Townsend's criterion for breakdown - the experimental determination of coefficients α and γ – breakdown in electro negative gases – time lags for breakdown – streamer theory of breakdown in gases – paschen' law – breakdown in non-uniform field and corona discharges.

Module:3 Conduction and breakdown in Liquid, solid dielectrics 6 Hours

Liquids as insulator – conduction and breakdown in pure liquids – conduction and breakdown in commercial liquids – testing of insulating oils – breakdown in solid dielectrics – intrinsic, electromechanical and thermal - breakdown in composite dielectrics.

Module:4 Generations of high voltages and currents 6 Hours

Generations of high direct current and alternating voltages – generation of impulse voltages and currents – tripping and control of impulse generators.

6 Hours Module:5 Measurement of high voltages and currents Measurement of high direct current voltages - Measurement of high ac and impulse voltages -Measurement of high current – direct, alternating and impulse – cathode ray oscillographs for impulse voltage and current measurements – measurement of direct current resistivity - measurement of dielectric constant and loss factor - partial discharge measurement. Module:6 High voltage testing of electrical apparatus 7 Hours Testing of insulators and bushings - Testing of isolators and circuit breakers - Testing of cables -Testing of transformers - Testing of surge arrestors – radio interference measurements. 6 Hours Module:7 Over voltage and insulation coordination in electric power system: Natural causes for over voltages – lightning switching and temporary over voltage – Protection against over voltage - bewley's lattice diagram - principles of insulation coordination on high voltage and extra high voltage power system. Module:8 **Contemporary issues:** 2 Hours **Total Lecture Hours** 45 Hours Text Book(s) High Voltage Engineering by M.S.Naidu and V. Kamaraju – TMH Publications, 5rd Edition, 2013. 2. EEE4009	FACTS and HVDC	L T P J C 3 0 0 4 4
Pre-requisite	EEE3003, EEE 3004	Syllabus version
Anti-requisite	Nil	v. 1.0

- 1. Understand the importance of controllable parameters and benefits of FACTS controllers.
- 2. Identify the significance of HVDC over HVAC transmission systems, types, control and application of HVDC links in practical power systems.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Study the applications of FACTS Controllers in power flow
- 2. Sort out the significance of shunt, series compensation and role of FACTS devices on system control.
- 3. Analyze the functional operation and design the controller of GCSC, TSSC, TCSC and SSSC.
- 4. Discuss the principles, operation and control of UPFC and IPFC.
- 5. Describe the SSR theory and its mitigation methods using FACTS controllers.
- 6. Explain the HVDC concepts and application of HVDC systems in bulk power transmission.
- 7. Classify the DC links and describe the operation of various MTDC systems.
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1	Introduction	6 Hours				
Control of p	ower flow in transmission lines, Application and	classification of FACTS controllers.				
Introduction	to HVDC transmission- Comparison between HVD0	C and HVAC systems

EEE4010	Power Quality	L	T	P	J	C
		2	0	0	4	3
Pre-requisite	EEE3004	Sylla	bus	s vo	ers	ion
Anti-requisite	Nil				v.	1.1

- 1. To describe power quality characteristics as per IEEE/IEC standards
- 2. To simulate and analyze overvoltage and transients in power systems
- 3. To evaluate SAIDI/SAIFI and THD at customer site using PQ analyzer
- 4. To conduct power quality survey at an Industrial/Datacentre/Hospital site

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Define and Describe power quality characteristics as per IEEE/IEC standards
- 2. Analyze voltage sag and interruption
- 3. Differentiate over voltages and enumerate the methods to reduce over voltages
- 4. Analyze harmonics & Design of filters for harmonic reduction
- 5. Application of IEEE/IEC power quality standards for measurements and analysis
- 6. Evaluate power quality at an Industry/Data centre/Hospital and Develop solution
- 7. Design a model to Evaluate power quality in grid integration of Microgrid
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1 Introduction To Power Quality

4 Hours

Terms and definitions: Overloading - under voltage - over voltage. Concepts of transients - short duration variations such as interruption - long duration variation such as sustained interruption. Sags and swells - voltage sag - voltage swell - voltage imbalance - voltage fluctuation - power frequency variations. International standards of power quality. Computer Business Equipment Manufacturers Associations (CBEMA) curve.

Module:2 Voltage Sags And Interruptions

4 Hours

Sources of sags and interruptions - Estimating Voltage Sag Performance -Fundamental Principles of Protection -Solutions at the End-User Level-Evaluating the Economics of Different Ride-Through Alternatives -Motor-Starting Sags ,Utility System Fault-Clearing Issues

Module:3 Overvoltages

4 Hours

Sources of over voltages - Capacitor switching - lightning - ferro resonance. Mitigation of voltage swells - surge arresters - low pass filters - power conditioners. Lightning protection - shielding - line arresters - protection of transformers and cables

Module:4 Harmonics

4 Hours

Harmonic sources from commercial and industrial loads, locating harmonic sources. Power system response characteristics - Harmonics Vs transients. Effect of harmonics - harmonic distortion - voltage and current distortion - harmonic indices - inter harmonics - 2-9kHz harmonics - Infraction harmonics

EEEE-011	Energy Addit and Conservation		2	0	0	4	3
Pre-requisite	EEE3003	Sylla	bus	ve	rsi	on	
Anti-requisite	Nil				,	v. 1	0.1

- 1. To understand the energy audit and energy saving concept in electrical system
- 2. To understand the energy scenario and Electricity Acts
- 3. To understand the effect of over exploitation of energy resources

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Understand Indian Energy Policy and Electricity ACT.
- 2. Discuss the impact of Climatic change on Environment and Energy resources.
- 3. Explain needs of energy management through energy audit.
- 4. Solve energy management problem using modern tools.
- 5. Estimate the energy consumption and derive energy saving opportunities
- 6. Design energy ratings for components.
- 7. Interpret ECBC for various Buildings & Support firms with HVAC specifications.
- 8. Design a component or a product applying all the relevant standards with realistic constraints.

Module:1	Energy Scenario and Energy Conservation Act	5 Hours
	2001 and related policies	

Types of Energy resources, final energy consumption, Indian energy scenario and consumption, energy needs of growing economy, energy intensity, long term energy scenario, energy pricing, energy security, energy conservation and its importance, energy strategy for the future. Energy conservation Act 2001 and its features, Electricity Act 2003, Integrated energy policy, National action plan on climate change

Module:2 Energy, Environment and Climate change 3 Hours

Energy and environment, air pollution, climate change United Nations Framework Convention on Climate Change (UNFCC), sustainable development, Kyoto Protocol, Conference of Parties (COP), Clean Development Mechanism (CDM), CDM Procedures case of CDM – Bachat Lamp Yojna and industry; Prototype Carbon Fund (PCF).

Module:3 Energy Management & Audit 3 Hours

Energy audit, need, types of energy audit. Energy management (audit) approach-understanding energy costs, bench marking, energy performance, matching energy use to requirement, maximizing system efficiencies, optimizing the input energy requirements, fuel and energy substitution, energy audit instruments and metering, precautions, thermography, smart metering

Module:4 Energy Monitoring and Targeting 3 Hours

Defining monitoring & targeting, elements of monitoring & targeting, data and information-analysis, techniques - energy consumption, production, cumulative sum of differences (CUSUM). Energy

Management Information Systems (EMIS)

Module:5 | Electrical system

5 Hours

Electricity billing, electrical load management and maximum demand control, power factor improvement, selection and location of capacitors, performance assessment of PF capacitors, distribution and transformer losses. Star labelled distribution transformers, Demand side management, Assessment of transmission and distribution efficiency, losses due to harmonics and voltage unbalance, Maximum demand controllers, automatic power factor controllers, energy efficient transformers.

Module:6 | Electric motors

3 Hours

Factors affecting motor performance, rewinding and motor replacement issues, energy saving opportunities with energy efficient motors. Star labeled energy efficient motors, motor history sheet (new, Ist rewind, 2nd rewind), Star operation, voltage unbalance, energy efficient motors, soft starters with energy saver, variable speed drives.

Module:7 Energy conservation in Buildings and Energy Conservation Building Codes (ECBC)

5 Hours

Energy Conservation Building Codes (ECBC), building envelope, insulation, lighting, Heating, ventilation, air conditioning (HVAC), fenestrations, water pumping, inverter and energy storage/captive generation, elevators and escalators, star labeling for existing buildings, Energy Service Companies based case studies

O O							

- 1. To impart in depth knowledge of various types of renewable energy sources.
- 2. To develop a micro grids using different renewable energy sources.
- 3. To understand the basic principles of operation of the various renewable energy sources.

Expected Course Outcome:

On completion of the course the student will be able to

- 1. Gain knowledge on different types of renewable energy sources.
- 2. Understand and design different type's thermal collectors and PV cells.
- 3. Comprehend the types and analyse the performance of wind mills.
- 4. Understand the basic operating principles of tidal and wave energy to design an Ocean Thermal Energy Conversion (OTEC) plant.
- 5. Identify geothermal energy sources and its application.
- 6. Utilization of biomass energy conversion techniques for conversion of waste into useful energy.
- 7. Understand the fuel cells types, working principles and its related applications.

Module:1 Introduction to Energy Sources

4 Hours

Energy sources on earth – Energy utilisation – Global energy problems and role of renewable energy – Introduction to alternate energy sources.

Module:2 | **Solar Energy and Applications**

8 Hours

Solar radiation - Solar radiation geometry - Solar radiation measurements - Principles, Characteristics and efficiency of different types of collectors-Solar cell-Solar cell array. Solar energy applications: water heaters, air heaters, solar cooling, solar cooking, solar pumping, and solar drying - Solar electric power generation: Solar tower concept (solar pond) and Solar photo-voltaic.

Module:3 | Wind Energy

7 Hours

Energy from the wind - Types and General theory of wind mills - Performance of wind machines-wind power efficiency - wind electric generation schemes -Applications of wind Energy - standalone and grid connected systems.

Module:4 | Tidal and Wave Energy

7 Hours

Energy from tides and waves - Tidal Barrage -working principles and operation of different types tidal and wave power generation- Design of 5 MW OTEC pro-commercial plant. Economics and Environmental impacts of OTEC.

Module:5 | Geothermal Energy

6 Hours

Estimation of geothermal power – Geothermal sources - principle of working and operation of different types of geothermal power generation- Future of geothermal energy.

Module:6 | **Bio-Energy**

6 Hours

Biomass conversion techniques: Biogas generation, classification and types of biogas plants,-Energy from biomass: Industrial wastes, municipal waste, burning plants and agricultural wastes.

Pre-requisite	EEE3003, EEE3004	Syll	abu	s v	ers	ion
Anti-requisite	Nil				v.	2.0

- 1. Architecture designs
- 2. Measurement and Communications Technologies
- 3. To familiarize the transmission and distribution automation using smart Grid.
- 4. Integration of vehicles with rechargeable batteries in to distribution networks.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Describe the necessity and evolution of smart grid with policies
- 2. Identify the appropriate measurement techniques for smart grid implementation
- 3. Apply theoretical concepts for analyzing the performance of the grid
- 4. Identify the appropriate choice for data transaction in a secure manner
- 5. Understand various power transmission automation techniques
- 6. Explain the working of distribution automation and the two way power flow of distribution system
- 7. Design the concept of V2G & G2V using Electric vehicle & Batteries
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1 Smart Grid Architectural Designs

7 Hours

Introduction. Evolution of electric Grid, Need for smart grid, difference between Conventional grid and smart grid, General View of the Smart Grid Market Drivers, Functions of Smart Grid Components, present development and international policies in smart grid.

Module:2	Smart	Grid	Communications	And	8 Hours
	Measure	ement Tecl	hnology		

Communication and Measurement , Monitoring, PMU, Smart Meters, and Measurements Technologies ,Wide Area Monitoring Systems (WAMS), Phasor Measurement Units (PMU) , Smart Meters , Smart Appliances, Advanced Metering Infrastructure (AMI),, GIS and Google Mapping Tools Multi agent Systems (MAS) Technology ,Multi agent Systems for Smart Grid Implementation , Micro grid and Smart Grid Comparison

Module:3	Performance Analysis Tools For Smart Grid	6 Hours
	Design	

Challenges to Load Flow in Smart Grid and Weaknesses of the Present Load Flow Methods ,types ,Load Flow State of the Art: Classical, Extended Formulations, and Algorithms , Congestion Management Effect , Load Flow for Smart Grid Design , Cases for the Development of Stochastic Dynamic optimal Power Flow (DSOPF), Application to the Smart Grid, Static Security Assessment (SSA) and Contingencies, Contingency Studies for the Smart Grid

Module:4	Information Security And Communication	6 Hours
	Technology For Smart Grid	

Data communication, switching techniques, communication channels, HAN, NAN, WAN, Bluetooth, Zigbee, GPS, Wi-Fibased communication, Wireless mesh network, Basic of cloud computing and cyber security for smart grid, Broadband over power line (BPL)

Module:5 Transmission Automation: 7 Hours

Introduction, Transmission Infrastructure functionality, Transmission technology, Energy Management System, Map Board Automatic Generation Control (AGC), Supervisory Control, Contingency Reserve Management, Interchange Scheduling, SCADA Master Terminal Unit, Transmission Substations, Synchrony phasor as IEDs, Relays as IEDs, Programmable Logic Controllers as IEDs, RTUs as IEDs, Smart Transmission Cyber Security.

Module:6 Distribution Automation:

6 Hours

Introduction, Distribution System Architecture, Distribution automation, working of Distribution Automation, ,role of Smart Grid Function of Distribution Automation, Importance of the Distribution System and Its Security Challenges, Securing the Distribution System, Distribution Management Systems, Standards, Inoperability, and Cyber Security

Module:7 Integration Of Vehicles With Rechargeable Batteries Into Distribution Networks 3 Hours

The revolution of individual electrical transport, consequences on the electrical network. Demand management and vehicle-to-grid, Vehicles as "active loads" Energetic services,. Frequency regulation.

Pre-requisite	EEE3004	Syllabus version
Anti-requisite	Nil	v. 1.0

1. This course introduces the fundamental concepts, principles, analysis and design of hybrid electric vehicles.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Comprehend the performance of conventional vehicles.
- 2. Infer the hybrid electric vehicles and its impact on environment
- 3. Analyze the various hybrid vehicle configurations and its performance.
- 4. Interpret the electric components used in hybrid and electric vehicles
- 5. Design the sizing of drive systems for electric vehicles.
- 6. Design and Select of sizing the drive systems.
- 7. Identify various communication protocols and technologies used in vehicle networks
- 8. Design a component or a product applying all the relevant standards with realistic constraints.

Module:1 Introduction to Conventional Vehicles:

3 Hours

Basics of vehicle performance, vehicle power source characterization, transmission characteristics, and mathematical models to describe vehicle performance

Module:2 Introduction to Electrical Vehicles:

3 Hours

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, future of electric vehicles, comparison with IC engine drive vehicles

Module:3 | Electric Vehicle Drive Train:

4 Hours

Transmission configuration, Components, gears, differential, clutch, brakes, regenerative braking, motor sizing. Basic concept of electric traction, Introduction to various drive train topologies, power flow control in electric drive topologies, fuel efficiency analysis

Module:4 | Electric Propulsion Unit:

4 Hours

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Introduction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

Module:5 | Sizing the drive system:

3 Hours

Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technology, Communications, supporting subsystems.

Module:6 | Energy Storage:

4 Hours

Introduction to energy storage requirements in hybrid and Electric vehicles, Battery based energy storage and its analysis, fuel cell based and super capacitor based energy storage and its analysis. Hybridization of different energy storage devices

- 1. To explore the various DC, AC and special machine drives for industrial applications
- 2. To study the various open loop and closed loop control schemes for drives.
- 3. To introduce the hardware implementation of the basic controllers using PLC.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Discuss the basic components of the drive system from automation perspective.
- 2. Analyze the various converter and chopper fed DC drive with appropriate control.
- 3. Explain the various scalar and vector control methodologies for induction motor drive.
- 4. Classify the synchronous motor drive with relevant control techniques.
- 5. Identify the various special machines and its control.
- 6. Understand the basic logics of PLC
- 7. Apply the PLC programming to control drives.
- 8. Design a component or a product applying all the relevant standards with realistic constraints.

Module:1 Introduction

5 Hours

Introduction to Electric Drives – Need of electric drives, basic parts, present scenario of electric drives, Mechanical Dynamics in an Electric Drive – Understand the concept of Industrial Automation and exposure on its components. Identify the Scope.

Module:2 DC Motor Drive

6 Hours

Four quadrant chopper circuit –steady state analysis of chopper controlled DC motor drives – DC motor drive using half controlled and fully controlled single phase and three phase rectifiers, continuous and discontinuous conduction modes of operation, 4-quadrant operation using dual converter- Braking. Analysis of Closed Loop Control of DC Motor.

Module:3 Induction Motor Drive

6 Hours

Induction motor with variable voltage operation -Variable frequency operation- constant v/f operation -constant torque and field weakening regions-Vector control strategies-Direct torque control scheme-Slip power recovery scheme- analysis-Applications

Module:4 Synchronous motor Drive

5 Hours

Synchronous motor Drive with voltage source inverter, load commutated thyristor inverter and Cycloconverter - Control strategies – Constant torque angle control –Unity power factor control – Constant mutual flux linkage control.

Module:5 Special Machine Drives

7 Hours

Permanent magnet synchronous motor - Field oriented control - Direct torque control - Sensor-less control. Brushless Direct current (BLDC) machine control strategies, Voltage Source Inverter fed BLDC-Torque ripple minimization - Application.

Module:6	Introduction to Programmable Logic	7 Hours
	Controllers	

PLC architecture, Input Output modules, PLC interfacing with plant, memory structure of PLC. PLC programming methodologies: ladder diagram, STL, functional block diagram, creating ladder diagram from process control descriptions, introduction to IEC61131 international standard for PLC.

Module:7 PLC based Control 5 Hours

Bit logic instructions, ladder diagram examples, interlocking, latching, inter dependency and logical functions, PLC Timer & Counter functions, Control components, sensors, actuators and valves, PID configuration, various network topologies and communication protocols like Profibus, Foundation field bus, Devicenet, HART

- 1. To impart in-depth knowledge in the field of control theory, analysis and design of MIMO systems in state space
- 2. Basic understanding on features of linear and nonlinear systems
- 3. To analyze the features of linear and nonlinear systems using phase plane analysis and describing function analysis
- 4. To analyze the stability of linear and nonlinear systems using stability concepts

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Model physical systems using state variable approach
- 2. Analyze MIMO systems by state space approach
- 3. Design state feedback controller and observer for simple and practical dynamic systems
- 4. Identify and classify the nonlinearities in the physical systems
- 5. Analyze the features and stability of nonlinear systems using phase portraits
- 6. Analyze the systems with common nonlinearities using describing function
- 7. Analyze stability of linear and non linear systems
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1 | State Variable Representation

6 Hours

Introduction, Concept of State Equation for Dynamic Systems, Non Uniqueness of State model, State Diagrams, Physical Systems and State Assignments - State space representation of multivariable systems

Module:2Solution Of State Equations6 HoursState transition matrix - Properties and Computation. Stabilizability and Detectability.Controllability and Observability.

Module:3 Design In State Space

7 Hours

State Feedback, Output Feedback, Design Methods, Pole Assignment, Full Order and Reduced Order Observers. Introduction to Linear Quadratic problems.

Module:4 Introduction To Non Linear Sytems

5 Hours

Introduction, Features of Linear and Non Linear Systems, Types of non-linearity, Common nonlinearities in control systems, Typical Examples , Concept of phase portraits – Singular points – Limit cycles

Module:5 PHASE PLANE ANALYSIS

7 Hours

Construction of phase portrait, Concepts of phase plane analysis Phase plane analysis of linear system and nonlinear system, Existence of limit cycles.

Module:6 Describing Function Analysis

6 Hours

Describing function fundamentals, Describing functions of common nonlinearities, Describing function analysis of nonlinear systems, Limit cycles, Stability of Oscillations

Module:7 Stability Analysis

6 Hours

Stability Concepts, Equilibrium Points, BIBO and Asymptotic Stability, Lyapunov theory, Lyapunov's Direct method, Variable gradient method Frequency Domain Stability Criteria, Popov's

Course Objectives																		

- 1. To give an emphasis on the characteristics and hardware architecture of embedded system and real time operating systems.
- 2. To provide essential knowledge on various communication protocols and understanding of Mealy and Moore machines.
- 3. To provide the essential knowledge in the embedded modeling and design of finite state machines.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Understand the characteristics and concepts of embedded system.
- 2. Understand the architecture of hardware embedded system
- 3. Compare the concepts of RTOS with general purpose OS.
- 4. Design hardware components/architecture for embedded system applications.
- 5. Interpret the wired and wireless communication protocols.
- 6. Design state space model using Moore and Mealy technique
- 7. Analyze the embedded system modelling with state transition and FSM.
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1 Introduction to Embedded systems:

3 Hours

Embedded system- Definition, Categories, Requirements. Challenges and issues in embedded software development, Trends in embedded software development, Applications of embedded systems.

Module:2 Hardware architecture of embedded system:

4 Hours

Processor, Memory, Memory models, Latches and Buffers, crystal, Timers, reset circuit, Watchdog timer, chip select logic circuit, ADC and DAC, Display units, Communication interfaces, Introduction to emulators.

Module:3 | Real time operating system (RTOS) with Kernel:

4 Hours

RTOS vs General purpose OS, Kernel Architecture and Functionalities - Task management, Process Scheduling, Resource management (Semaphores and Mutex), Task Synchronization. Embedded software development Life cycle.

Module:4 Serial Bus for embedded systems:

5 Hours

I2C- Features, Arbitration, Bit Transfer Waveform and exceptions. CAN- Layered Architecture of CAN, properties, Data Rates, Frame types. USB- Physical interface, Enumeration process in USB, Types of packets, Types of transfers.

Module:5 Wireless Applications:

4 Hours

Introduction to wireless networking –Basics. Bluetooth – Overview, power levels, Device communication, Base band, Packet format, packet heading, packet types and packet timing. Overview of IEEE 802.15.4 standard feature, Device types and Frame format. ZigBee – Architecture objectives, Network model, ZigBee stack block diagram, Network layer. ZigBee Vs

\mathbf{R}^{1}	luetootl	h
	искол	

Module:6 Introduction to Moore and Mealy models

4 Hours

Design of a Level to Pulse converter implementing Moore and Mealy FSM- Block diagram, definition of the state, building state transition diagram to state table, Relative trade-offs. State space models of sequential machines- Introduction.

Module:7 Embedded System Modelling:

4 Hours

Finite State Machine (FSM) - Rules for designing FSM, Design examples implementing state and state transition diagram for vending machine, ATM, digital lock.

Module:8	Contemporary issues:	2 Hours
	Total Lecture Hours	30 Hours

- 1. To develop the student's knowledge in various robot structures and their workspace.
- 2. To develop student's skills in performing spatial transformations associated with rigid body motions & some knowledge and analysis skills associated with trajectory planning.
- 3. To develop student's skills in performing kinematic analysis of robotic systems and some knowledge and skills associated with robot control

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Select different types of sensors and actuators for robotic systems
- 2. Apply spatial transformation to obtain the forward kinematic equation of robot manipulators.
- 3. Analyze forward and inverse kinematics for simple robot manipulators.
- 4. Derive Jacobian matrix and identify singularities.
- 5. Identify the dynamics of the robotic manipulator using Euler Lagrangian approach
- 6. Generate joint trajectories for motion planning.
- 7. Implement the multivariable controller for setpoint tracking and disturbance rejection
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1 Introduction 2 Hours

Brief History, Types of robots, Degrees of freedom of robots, Robot configurations and concept of workspace, End effectors and Different types of grippers, vacuum and other methods of gripping. Pneumatic, hydraulic and electrical actuators, applications of robots, specifications of different industrial robots.

Module:2	Rigid	Motion	and	Homogeneous	5 Hours
	transfor	mation			

Position definitions. Coordinate frames. Different orientation descriptions. Free vectors. Translations rotations and relative motion, Composition of rotation, rotation with respect to fixed frame and current frame, parameterisation of rotation, Euler Angele, roll, pitch, yaw, axis/angle representation, Homogeneous transformation

Module:3 Forward Kinematics 4 Hours

Link coordinate frames. Denavit-Hartenberg convention. Assignment, of coordinate frame, Joint and end effector Cartesian space. Calculation of DH parameters and forward kinematic equation of different configuration of manipulator, Planner elbow manipulator, Cylindrical three link, SCARA, Spherical Wrist and other configuration.

Module:4 Velocity Kinematics: 4 Hours

Forward kinematics transformations of position Translational and rotational velocities. Velocity Transformations. Singularity, The Manipulator Jacobian.

Module:5 Robot Dynamics 4 Hours

Lagrangian formulation, general expression for kinetic and potential energy of n-link manipulator, Newton-Euler equations of motion. Derivation of equations of motion for simple cases: two-link manipulators.

- 1. To provide an understanding of the digital VLSI concepts, circuit design, principles.
- 2. To provide introduction to architecture and design concepts underlying modern complex VLSI.
- 3. To provide students with the background needed to design, develop, and test digital circuits using VHSIC Hardware Description Language (VHDL) and Verilog HDL.
- 4. To provide the students to design the digital circuits using transistors for complex systems.

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Analyze and identify the methodologies for fabricating the ICs.
- 2. Synthesize and design arithmetic circuits using HDL.
- 3. Design logic circuits using CMOS and its equivalent layout for fabrication.
- 4. Analyze the characteristics of CMOS to reduce the delay and power dissipation in logic circuits.
- 5. Identify transistor configurations for better performance in logic circuits.
- 6. Design memory devices using transistors.
- 7. Identify and design arithmetic circuits for various applications.
- 8. Design and Conduct experiments, as well as analyze and interpret data

Module:1 Overview of VLSI Design Methodology 4 Hours

The VLSI design process, Architectural design, logical design, Physical design, layout styles, Full custom, Semi custom approaches.

Module:2 | Introduction to Verilog HDL

6 Hours

Introduction Verilog HDL, Gate level, data flow, behavioral modeling, Data types and Operators, Blocking and non-blocking assignment statements. Test benches.

Module:3 Introduction to MOS Devices

6 Hours

Introduction to MOS Transistor Theory: nMOS, pMOS Enhancement Transistor, MOSFET as a Switch, Threshold voltage, MOS Device Design Equations, Body effect, Second order effects. MOS Transistor Circuit Model. Stick Diagram, Layout Design Rules.

Module:4 Circuit Characterization And Performance Estimation

6 Hours

DC Characteristics of CMOS Inverter, Switching Characteristics of CMOS Inverter, Transistor Sizing Analytical Delay model- Rise Time, Fall Time. Gate Delays, RC Delay Models, Logical Effort. Power Dissipation: Static-Dynamic-Short Circuit Power Dissipation

Module:5 | Combinational logic Circuits

6 Hours

Introduction, Static CMOS Design- Complex Logic Gates, Ratioed Logic, Pass-Transistor Logic, Transmission gate Logic, Dynamic CMOS Logic Design: Dynamic Logic Design Considerations. Speed and Power Dissipation of Dynamic logic, Signal integrity issues, Cascading Dynamic gates.

- 1. To impart knowledge on the infrastructure, sensor technologies and networking technologies of IoT.
- 2. To analyse, design and develop IoT solutions.
- 3. To explore the entrepreneurial aspect of the Internet of Things
- 4. To apply the concept of Internet of Things in the real world scenarios

Expected Course Outcome:

After successfully completing the course the student should be able to

- 1. Identify the main component of IoT
- 2. Program the controller and sensor as part of IoT
- 3. Assess different Internet of Things technologies and their applications

Module:1	Introduction:	2 hour
	lustry – An Introduction, the relevance of the IT-ITeS sector	, Future Skills –
An Introduction,	General overview of the Future Skills sub-sector	
Module:2	Internet of Things - An Introduction:	3 hours
Evolution of IoT and applications	and the trends, Impact of IoT on businesses and society, Exicoross industries.	sting IoT use cases
Module:3	IoT Security and Privacy:	6 hours
	vacy risks, analyze security risks, Technologies and met standards and regulations, Social and privacy impacts	hods that mitigate
Module:4	IoT Solutions	6 hours
Planning for IoT	elopment, Need and Goals for IoT solution, Adoption of IoT Solution: Evaluate costs, competition, technology challe ations, Need for stakeholder buy-in	
Module:5	Prototyping the Pilot execution:	5 hours
	ping Stages, deploy real-time UI/UX visualizations, Methory business outcomes, feedback and data obtained from execution execution.	
Module:6	Scalability of IoT Solutions:	5 hours
	eloping complete IoT solutions, Strategies for implementation Solutions, Methods, platforms and tools. Web and Mobile I	
Module:7	Build and Maintain Relationships at the Workplace, Team Empowerment	3 hours

Module:1	IoT Solution Models:	3 hour

Models applied in IoT solutions, Semantic models for data models, Application of semantic models, information models, information models to structure data, relationships between data categories.

Module:2	Data Models :	3 hours
Miodule.2	Data Models.	3 Hours

Tags to organize data, tag data to pre-process large datasets, predictive models for forecasting, Application of predictive models.

Module:3	Simulation Scenarios:	4 hours
----------	-----------------------	---------

Models to simulate real-world scenarios, Application of the models, stages of data lifecycle, reuse existing IoT solutions, reusability plan.

Module:4 Use Case Development 4 hours

Approaches to gather business requirements, defining problem statements, business requirements for use case development, Assets for development of IoT solutions.

Module:5 Value engineering and Analysis: 4 hours

Principles and phases of Value Engineering and Analysis, Frameworks for Value Engineering in IoT solutions, cost-function analysis of IoT solution components, action plans to incorporate Value Engineering, Data modelling requirements, Development models: Waterfall, Agile, Spiral, V models, monetization models for IoT use cases - 'Outcomes As A Service' model.

Module:6 Data Analytics for IoT Solutions: 6 hours

Data generation, Data gathering, Data Pre-processing, data analyzation, application of analytics, vertical-specific algorithms, Exploratory Data Analysis.

Pre-requisite	Nil	`Syllabus version
Anti-requisite	Nil	v.2.1

- 1. To make the students to understand the principles of solid mechanics.
- 2. To make the students to understand the basic concepts of mechanical vibrations.
- 3. To familiarize the students with the properties of fluids and the applications of fluid mechanics.
- 4. To make the students to understand the principles of thermodynamics and to get broad knowledge in its applications.
- 5. To provide the students a gist of the theory behind the refrigeration and air conditioning system.
- 6. To make the students to understand the principles of heat transfer.

Expected Course Outcome:

Student will be able to

- 1. Evaluate the allowable loads and associated allowable stresses before mechanical failure in different types of structures.
- 2. Assess the vibrations associated with various mechanical systems.
- 3. Apply the fundamental laws of thermodynamics for the analysis of wide range of thermodynamic systems.
- 4. Explain basic concepts of fluid mechanics and their applications.
- 5. Demonstrate and analyze various refrigeration and air conditioning systems.
- 6. Evaluate heat transfer through different modes.

Module 1 Solid Mechanics

5 hours

Concept of stress and strain-Normal and shear stress -relationship between stress and strain-Elasticity- poisson's ratio-shear force and bending moment diagrams for simply supported, cantilever and overhanging beams - Analysis of forces in truss members

Module 2 | Mechanical Vibrations

5 hours

Single degree of freedom systems- Un-damped and damped- Natural frequency- transverse vibration of shafts- critical speed by Rayleigh's and Dunkerley's method. Forced vibration-Harmonic excitation-Magnification factor- Vibration isolation-Torsional vibration-Holzer's analysis.

Module 3 Fluid Mechanics

4 hours

Properties of fluid- Uniform and steady flow- Euler's and Bernoulli's Equations- pressure losses along the flow. Flow measurement- Venturi meter and Orifice meters, Pipes in series and parallel. Introduction to Turbines and pumps - classification of turbines - specific speed and speed governance. Classification of pumps- characteristics and efficiency.

Module 4 Thermodynamic systems

3 hours

Basic concepts of Thermodynamics - First law of thermodynamics - Second law of thermodynamics - applications. Working Principle of four stroke and two stroke engines - Open and closed cycle gas turbines

Module 5 | Steam Boilers and Turbines

3 hours

Formation of steam – Thermal power plant – Boilers -Modern features of high-pressure boilers - Mountings and accessories - Steam turbines: Impulse and reaction principle.

Module 6	Compressors,	Refrigeration	and	Air	5 hours
	conditioning				

Air Compressors- Principle of operation of reciprocating, centrifugal and axial flow compressors - Basic functions of refrigeration- Vapour Compression and Vapour absorption systems-Principle of air conditioning system- Types and comparison.

Module 7 Heat Transfer

3 hours

Fundamentals of heat transfer-conduction, convection and radiation - Free convection and forced convection - Applications like cooling of electronic components, electric motor and transformers

Module 8Contemporary Discussion2 hoursTotal Lecture hours30 hours

Mode: Flipped Class Room, [Lecture to be videotaped], Use of physical cut section models to lecture, Visit to Industry, Min of 2 lectures by industry experts.

Pre-requisite	Nil		Syllabus version
Anti-requisite	Nil		v. 1.0
Course Objective	PC•		

To enable the students to understand the nature of different types of materials namely Conducting, Semi conducting, Dielectrics, Magnetic and Superconducting materials.

Expected Course Outcome:

- 1. Students will be able to understand the fundamentals of physics for conducting materials and how it is pertinent for engineering related applications
- 2. Students can understand how to describe the basic classification of semiconducting materials and how to develop an engineering related devices
- 3. Students will be able to describe the fundamental polarization mechanism involved in dielectrics and how it is responsible with different frequency of radiation including how stress and strain plays a major role in piezoelectric.
- 4. Learn basic magnetization concepts in detail and study different properties of magnetic materials, including the analysis of various magnetic properties and its applications.
- 5. Students will be able to describe the phenomenon of superconduction and explain how superconductors behave in magnetic fields including some engineering applications of superconductors.
- 6. Gain the basic phenomenon behind the mechanism between materials and light and how a material blacking, absorbing and enhancing the light including the complete idea of negative index and negative materials by understanding the universal parameters of permeability and permittivity.
- 7. Gain an introduction to nanomaterials and in depth knowledge about synthesis and properties of bulk and nanostructured materials, including their applications.
- 8. Gain knowledge by demonstrating to understand electrical, thermal, dielectric, semiconducting and magnetic properties of materials LAB

Module:1 | Conducting Materials

6 hours

Drude-Lorentz Classical free electron theory of metals, electrical conductivity, relaxation time, drift velocity, Matthiessen's rule, thermal conductivity Wiedemann-Franz law, drawbacks of classical theory, Kronig-Penny Model, Quantum theory (derivation) and its success, Band theory of solids.

Module:2 | Semiconducting Materials

7 hours

Band theory of solids – Kronig-Penney Model & its success; P and N type – direct and indirect semiconductor; Density of energy state; Variation of Fermi level with respect to temperature and carrier concent rat ion in intrinsic and extrinsic semiconductors; Hall effect – theory – experimental proof; Hall Sensors, Problems.

Module:3 Dielectric Materials

7 hours

Introduction, Clausius-Mosotti relation; Polarization mechanisms, electronic, ionic and orientation, Temperature dependence of dielectric constant, Frequency dependence of dielectric constant, Dielectric loss, dielectric breakdown types, dielectric materials as electrical insulators -

EEE1022	Fundamentals of Reliability Engineering		L	T	P	J	C
			1	2	0	0	2
Pre-requisite	MAT2001/MAT2002	Syl	lab	us v	ver	sio	n
Anti-requisite	Nil	v. 1	0.				
0 01 4							

Course Objectives:

- 1. Apply the principles & methods of reliability and safety engineering tools and techniques for Design problems
- 2. Understand the importance of reliability and its relationship with quality and safety
- 3. Identify the factors influencing the reliability of a system

Expected Course Outcome:

On the completion of this course the student will be able to:

- 1. Summarize the requirements of system reliability and its role.
- 2. Develop models to analyze and predict reliability performance using block diagrams.
- 3. Design to meet the reliability and safety objectives of the components.
- 4. Examine the various reliability test strategies and select the best strategy to assess
- 5. Analyze reliability in manufacturing and maintenance engineering
- 6. Understand the influence of variability in production on system reliability
- 7. Develop the reliability predictive models using software tools

Module:1 Reliability Fundamentals

2 Hours

Terms and Definitions - RAMS, Benefits of Reliability Engineering, Bathtub Curve, Interrelationship Between Rams and Quality, Product Life Cycle - Phases and Applicable RAMS Activities, Reliability Engineer- role and responsibilities in product life cycle, Ethics in reliability engineering.

Module:2 Probability And Statistics For Reliability

2 Hours

Basics of Statistics and Probability Concepts, Probability Distributions, Probability Functions, Sampling Plans for Statistics and Reliability Testing, Confidence Intervals, Introduction to Weibull Analysis.

Module:3 Reliability And Safety In Design - I

3 Hours

Reliability Requirements - Allocation, Reliability Modelling, Life Estimation, Part And Assembly Reliability Considerations, Introduction to Reliability Analysis Techniques - FMEA, Fault Tree Analysis, Worst Case Analysis, Durability Analysis

Module:4 Reliability And Safety In Design - Ii

3 Hours

Finite Element Analysis, Safety Analysis, Thermal Analysis, Electromagnetic Analysis, Maintainability and Testability Analysis, Common Mode Failure Analysis, Risk Matrix, Stress and Strength Analysis, Physics of Failure and Failure Mechanisms.

Module:5 Reliability Testing

4 Hours

Reliability Testing Strategies Introduction, Design of Experiments, Combinatorial Testing, HALT, RGT, ALT, Fracas And Root Cause Analysis. Sample Size and Test Duration – Guidelines

(Deemed to be University under section 3 of UGC Act, 1956)

EEE4014	Switched Mode Power Conversion	$ \mathbf{L} \mathbf{T} \mathbf{P} \mathbf{J} \mathbf{C} $								
		2 0 0 4 3								
Pre-requisite	EEE3004	Syllabus version								
Anti-requisite	Nil	v. 1.0								
Course Objectives:										
	knowledge on switch mode power conversion concepts and a									

2. Design and analysis of appropriate switched mode power supplies for particular application

Expected Course Outcome:

Computers and Portable Electronics

After completion of this course, the student will be able to:

- 1. Understand the concepts of switched mode power conversion
- 2. Analyse different non isolated DC-DC converters under steady-state condition.
- 3. Perform circuit analysis for different dc –dc converters under different operating conditions
- 4. Compare isolated and non-isolated dc-dc converters
- 5. Design magnetic components of dc-dc converters
- 6. Apply EMI filtering techniques for suppression of EMI generated by different switched mode converters.
- 7. Know the applications of switched mode power converters for different domains
- 8. Design a component or a product applying all the relevant standards with realistic constraints

Module:1	Introduction	6 Hours
Linear conve	erters Vs switching converters. Basic principles of s	witch-mode power conversion-
	steady state in switching converters, volt-second ar	<u>*</u>
	analysis of (CCM) Buck Converter, Boost Converter	
•	•	
Module:2	Discontinuous conduction Mode analyses (DCM)	3 Hours
buck, and bo	ost converter. Losses and efficiency	
Module:3	Non-Ideal converter analysis	4 Hours
buck, boost a	and buck converters. Losses and efficiency	
Module:4	Introduction to Isolated DC-DC converters	4 Hours
Steady state	analysis of isolated dc-dc converters including for	rward, flyback, half bridge and full
bridge topolo	ogies	
Module:5	Magnetic Design	4 Hours
Selection of	f energy storage inductor, Design of high freque	ency Inductor and high frequency
transformer		
Module:6	EMI Suppression in SMPS	4 Hours
EMI filter c	components, Conducted EMI suppression, and ground	ding. Non-linear phenomena in
switched m	ode power converters: Chaos.	-
Module:7	Applications	3 Hours
High-Freque	ncy Power Sources for Fluorescent Lamps and Low	-Input-Voltage Regulators for Laptop

Module	e:8	Lecture by industry expe	erts.		2 Hours					
			Total Lecture H	ours	30 Hours

EEE4015	Power Converters Analysis and	L T P J C							
			2 0 0 4 3						
Pre-requisite	EEE3004		Syllabus version						
Anti-requisite	Nil		v. 1.0						
Course Objective	s:								
_	systematic approach for design of all power ele		ſS						
	e the power electronic converters with active ar	nd passive loads							
3. To introdu	ice the basics of Multilevel inverters								
F . 1 G	0.1								
Expected Course			_						
_	of this course the student will be able to:								
	ne various AC to DC converters								
	e various three phase rectifiers e various DC to DC converters with commutati	on circuits							
•	e basic inverter types with modulation technique								
	e AC to AC converters with different loads	CS							
	e various types of Pulse Width Modulation Tec	hniques for powe	er converters						
	e recent Multilevel Inverters with their advanta								
8. Design a c	component or a product applying all the relevan	t standards with	realistic						
constraints									
Module:1 SIN	GLE PHASE AC-DC CONVERTERS		3 Hours						
Single Phase Semi	converters- Fully Controlled Converters								
1									
	REE PHASE AC-DC CONVERTERS		3 Hours						
Three Phase Semi	converters- Fully Controlled Converters								
	DC CONVERTERS		5 Hours						
,	gn of DC to DC converters- Control of DC-DC								
converters- Buck-	Boost converters- Cuk converters – Chopper an	d commutation c	circuits.						
Module:4 DC-	-AC CONVERTERS		4 Hours						
		mont soums inv							
	Three phase inverters - Voltage source and Cu								
mode operation of	3 phase inverter – PWM Techniques – Harmon	iic emimation te	zenniques.						
Module:5 AC-	AC CONVERTERS		5 Hours						
	conversion using voltage controllers. Single ph	ase and Three Pl							
-	e phase step up, step down cycloconverters –								
phase to three phase		ance phase to sh	isic phase and unce						
phase to three pha	50 0 1000 11 1010 15								
Module:6 PW	M TECHNIQUES FOR INVERTERS		4 Hours						
		WM- Space Vec							
Single Pulse Mod Harmonic Elimin	dulation- Multiple Pulse Width Modulation- SP	WM- Space Vec							

4 Hours

ADVANCED POWER CONVERTERS

Module:7

Multilevel concept – diode clamped – flying capacitor – cascade type multilevel inverters - Matrix converters

Modul	e:8	Contemporary issues:			2 Hours					
			lours	30 Hours
