**TECHNICAL MAGAZINE FROM
THE SCHOOL OF ELECTRICAL
ENGINEERING**

***DEPARTMENT OF ELECTRICAL &
ELECTRONICS ENGINEERING***

Vision

To offer an education in electrical engineering that provides strong fundamental knowledge, skills for employability, cross-disciplinary research and creates leaders who provide technological solutions to societal and industry problems.

Mission

- Provide personalized experiential learning in industry sponsored labs to prepare students in electrical engineering with strong critical thinking and employability skills.
- Foster design thinking, creativity and cross-disciplinary research with highly qualified faculty to create innovators and entrepreneurs in the broad area of electrical engineering.
- Collaborate with national and international partners to provide innovative solutions to societal and industry challenges.

From the Magazine Team

“We are delighted to present to you all yet another fascinating issue of this magazine, which has been painstakingly, creatively, and inventively made. This year's issue, a result of perseverance and teamwork, captures the spirit of our department's advancements in a variety of areas this academic year. This edition, which was thoughtfully drafted and properly indexed, is adorned with teacher messages, creative corners, academic accomplishments, and much more. We genuinely hope that these observations will pique your interest, encourage you, and highlight the seemingly endless possibilities of electrical engineering. Explore and celebrate our dynamic community's outstanding accomplishments

HAPPY READING!”

Assistant Designers:(UG Second year)

2. DEPARTMENT OVERVIEW

2.1 History of EEE

2.2 Innovations

2.3 Facilities

2.4 Events

3. ACHIEVERS' SECTION

3.1 Student Achievements

3.2 Faculty Achievements

4. STUDENTS AND FACULTY CORNER

4.1 Projects

4.2 Publications

5. AWARDS AND RECOGNITIONS

6. ALUMNI SPOTLIGHT

7. CREATIVE CORNER

1.1 DEAN'S REFLECTION

Respected readers, It gives me immense pleasure to welcome you all to drift through the pages of a yet another edition of our department's annual magazine, a testament to the achievements, ideas and aspirations that define our department of electrical engineering, SELECT.

Electrical engineering is not merely about circuit analogies and systems. It is rather, the art of innovation that breathes life into technology. From renewable energy systems and intelligent networks to cutting edge advancements in automation and artificial intelligence, this domain has been a driving force behind societal progress. As engineers, we are tasked with not just solving present-day challenges but envisioning a future that aligns with sustainable and inclusive growth.

Innovation is also about adaptability and resilience. In an era of rapid technological evolution, electrical engineers hold the responsibility of leveraging emerging trends like green technologies, energy-efficient systems, and the Internet of Things to redefine how we live and work. The solutions we create today will shape the world for generations to come.

As you traverse through the columns of this magazine, I would encourage you to reflect on the transformative potential of this domain. Let this publication ignite your passion and inspire you to contribute in this ever evolving field. Together let us continue to shape young hearts, and lead with vision, creativity and purpose.

Dr. Sivabalan. S
Professor and DEAN
School of Electrical Engineering (SELECT)

1.2 HoD's FORESIGHT

As A P J Abdul Kalam once stated, "Dream is not that which you see while sleeping, it is something that does not let you sleep." Learning is always a journey filled with obstacles. As a teacher, I get to witness a variety of students and faculty members working hard to fulfil their goals.

We commemorate the achievements that make our department the centre of creativity and innovation as we continue to navigate the always shifting terrain of our branch. This article demonstrates our department's ground-breaking research, innovative efforts, and exceptional accomplishments. Since we all think that the possibilities are endless, it demonstrates the ingenuity and the incredible accomplishments made by the teachers, students, and researchers in our department.

I want to express my appreciation to the magazine team in our department for bringing the vibrant atmosphere of our department to life. We use this publication as a forum to strengthen our sense of belonging. Undoubtedly, this edition will serve as a memory of the fantastic year we've had.

I hope our department's accomplishments make you proud and inspire you to keep going and realize your goals.

Dr. Jacob Raglend Isaac
Professor and HOD/EEE
School of Electrical Engineering (SELECT)

1.3 FACULTY COORDINATOR'S MESSAGE

Greetings, Readers

Speaking to you on behalf of the department of Electrical and Electronics Engineering has always been a privilege and a joy. Students are continuously supported by the department, which also helps them develop their innovative skills and abilities. Our department's several priority areas, such as renewable energy and e-vehicles, are aimed at improving people's everyday life. The department empowers students to carry out financed research in well-equipped research laboratories by fostering an innovative and inquisitive environment. To keep them on the cutting edge, we give them a well-planned, up-to-date academic education. We also give them the connections they need to pursue higher education and an entrepreneurial path.

Students that receive holistic development become more responsible, creative, and inventive. As a result, we encourage our students to participate in extracurricular and co-curricular activities in addition to their coursework. They can become future leaders since this method boosts their self-esteem, cultivates a positive outlook, and increases their social and ethical awareness. Their constant development and accomplishments are made possible by their efforts as well as the steadfast support of their parents, instructors, and well-wishers. Little actions taken repeatedly over time add up to success. Never give up because the work you do now will determine the engineer, inventor, and leader you become in the future. I would want to express my sincere gratitude to everyone who helped the EEE department succeed.

Dr. Indragandhi V
Professor
School of Electrical Engineering (SELECT)

2.1 HISTORY OF EEE

The B.Tech Electrical and Electronics Engineering programme had its inception in 1994. The programme lays emphasis on strong theoretical background on electrical engineering concepts in addition to providing avenues for divergent applications related to electromagnetism, power engineering, electronics and renewable resources.

The programme is handled by a team of experienced faculty equipped with wide research expertise in domains such as Smart Grid, Energy Management, E-Vehicle, Renewable and Sustainable Energy, Energy Monitoring, Insulation Diagnosis etc.

The department has excellently furnished laboratories to cater to the needs of both curriculum and research requirements. In addition, industry sponsored Centre of Excellence Schneider Electric Laboratory, Power System Research Lab, Switchgear & Protection Lab with high voltage testing facility for insulation diagnosis etc., provide the students with the essential hands-on experience to tackle real-time industry related challenges.

The department has signed several MoUs with various reputed Industries and Universities across the globe. The curriculum of the programme is conceived and formulated in close collaboration with leading experts from industries to ensure effective bridging of the gap between industry and academia.

2.2 INNOVATIONS

Power & Energy Systems

- **Solid-State Transformers (SSTs):** Improved SST designs enabled higher efficiency and reliability in power distribution, replacing bulky traditional transformers.
- **Wide Bandgap Semiconductors (SiC & GaN):** Silicon carbide (SiC) and gallium nitride (GaN) gained more adoption in power electronics, boosting efficiency in inverters and chargers.
- **Advanced DC Microgrids:** Progress in DC-based power systems improved energy efficiency in data centers, electric vehicles (EVs), and renewable energy integration.
- **Wireless Power Transfer (WPT) for EVs:** High-power wireless charging for electric vehicles became more efficient, with companies developing 100kW+ systems for faster charging.

Renewable Energy & Fuel Cells

- **Hydrogen Fuel Cell Efficiency Gains:** Advances in proton exchange membrane (PEM) fuel cells increased power density, improving applications in EVs and stationary power.
- **Perovskite Solar Cells:** These new-generation solar cells achieved record efficiencies of over 25%, making them a strong alternative to silicon-based photovoltaics.
- **Hybrid Energy Systems:** Integration of solar, wind, and fuel cells into hybrid microgrids improved reliability and sustainability.

Electric Vehicles (EVs) & Transportation

- **800V EV Architecture:** Carmakers like Porsche and Tesla introduced 800V battery systems, reducing charging times and improving efficiency.
- **Silicon Carbide (SiC) Inverters:** These high-performance inverters improved power conversion efficiency in EV drivetrains.
- **Fast Charging & Solid-State Batteries:** Advances in lithium-ion and solid-state batteries significantly improved charging speeds and energy densities.

-
- **Fuel Cell-Powered Two-Wheelers:** Emerging applications of hydrogen fuel cells in motorcycles and scooters showed promising results.

Smart Grids & Energy Storage

- **AI-Based Grid Management:** AI and machine learning optimized energy distribution, reducing power losses and improving demand forecasting.
- **Advanced Energy Storage:** Innovations in sodium-ion and flow batteries provided alternatives to lithium-ion for grid-scale storage.
- **Vehicle-to-Grid (V2G) Integration:** EVs were increasingly used as mobile energy storage, feeding power back to the grid when needed.

IoT& Embedded Systems

- **Edge AI in Embedded Systems:** AI-powered microcontrollers enabled smarter, more efficient real-time decision-making for industrial automation and energy applications.
- **Ultra-Low-Power IoT Sensors:** Advances in energy harvesting allowed IoT devices to operate with minimal external power sources.
- **5G-Enabled Smart Grids:** Faster and more reliable communication networks improved power grid monitoring and automation.

Power Electronics & Control Systems

- **Multilevel Converters:** Improved topologies like modular multilevel converters (MMC) enhanced efficiency in HVDC transmission and electric drives.
- **Resonant Power Converters:** These converters reduced switching losses in power supplies and inverters, improving overall efficiency.
- **AI-Based Motor Control:** Machine learning algorithms optimized motor efficiency and predictive maintenance in industrial applications.

2.3 FACILITIES

The B.Tech Electrical and Electronics Engineering program conceived with industry partners and ensure world-class facilities which provide students with the knowledge and technical expertise in a wide range of Electrical and Electronics domains which include latest research areas like Smart Grid, Power Electronics, and Electric Vehicle etc. The electrical and electronics engineers are required in various core industries, IT companies and PSUs. Besides, the program enhances the creativity of the students to develop innovative projects and eventually results in novel products which help to starts their own company.

Laboratories:

- Schneider Centre for Excellence Laboratory
- Electrical Machines Laboratory
- Power Systems Research Laboratory
- Protection and Switchgear Laboratory
- Digital Simulation Laboratory

Major Equipment:

- High Voltage Test & Measuring Equipment – Impulse Test Set (100 kV, 10 kVA AC, 140 kV, 25 mA DC / 140 kV, 980 Joules)
- Fault Analyzer (LL-LG)
- Dielectric Testing and Measurement System for Insulation Diagnosis- Partial Discharge Testing and Measurement System
- 3-Phase Transformer/ differential relay (Transformer Protection Simulator)
- Generator Protection Simulator

- SCADA Based Setup for Generator Protection Simulator
- CYME T & D Power Engineering
- Air Circuit Breaker
- Typhoon - Real-Time emulator
- PMSG Machine coupled with DC motor
- ElecNet VT Perpetual
- Programmable AC/DC Electronic Load
- High Performance GPU Hardware System with Accessories
- Driver Control System for Electrical Machines and Driver Test Bench
- APLAB make custom built DC power supply. O/P 20-200V/200A
- Computerization of testing and controlling Induction Motor bundle (8 slot integrated dual controller Artix-7FPGA, 512 MB RAM and 1GB ROM memory with ethernet cable)

PV integrated shunt active filter

2.4 EVENTS

According to the statistical data, students have orchestrated a wide range of events ranging from thons to work shops. These events serve as a platform for creativity, networking, and knowledge exchange, contributing significantly to personal and academic development. These initiatives not only enhance students' organizational and leadership skills but also promote collaboration and innovation across various disciplines.

4.2 PUBLICATIONS

Students are encouraged to submit articles to magazines that are pertinent to the most recent advancements in the fields of Electrical and Electronics Engineering, as well as other engineering disciplines. The received articles are reviewed by the team members and the selected articles are published in ELECTRICA magazine.

S.No.	Name of the article	Name of the contributed student	Description
1	Elevated Energy Storage System	Nisshanthan S 19BEE0068 Ravin Chandar J 19BEE0065 Mohnish S 19BEE0114	Energy storage is a crucial element in the development of modern energy systems. The integration of renewable energy sources and the improvement of grid reliability and stability are dependent on efficient energy storage systems. One promising approach to energy storage is the lifting of heavy objects against gravity, storing potential energy that can be released later to generate electricity. This process of storing energy via gravity has been studied extensively with a focus on lifting blocks or other heavy masses.
2	E-Bike Motor Speed Controller	AkashDey 20BEE0169 Sidrameshwer 20BEE0289	The system includes an STM32 controller, throttle input, tire speed sensor, switch, motor driver, e-bike motor, battery and OLED display. The focus is on e-bike throttles and speed displays. A non-contact throttle position sensor (TPS) uses Hall effect, inductive, or magneto resistive technology to control the throttle. Stable sensor and sign handling circuit board detect sensor magnetic field adjustment. Created voltage goes to the ECU. The controller processes the throttle signal and controls power and speed by altering motor voltage through the motor driver. Speed sensors use hall effect to transmit wheel RPM and monitor speed sensor information. The LCD displays the RPM value and turning off the main switch turns off motor speed and sensor monitoring. Turning on the switch resumes the procedure.

3	Solar based Electric Vehicle Charging Circuit in G2V and V2G modes of Operation	Anisha Pattanayak (20BEE0080)	This study offers a solar-powered EV charging circuit. The Incremental Conductance MPPT Algorithm maximizes solar PV panel power at STC conditions. Using a boost converter, the solar PV panel charges a 100Ah battery to 400V. Buck operation requires stepping down the voltage for 220V batteries. The system's passive parameters are calculated and used. The electric vehicle is charged from the grid using a PR controller with a corner frequency of 10rad/sec when solar PV is unavailable. A DC-DC bidirectional converter receives 400V DC from a H-bridge rectifier. Reverse power flow occurs when grid voltage and current are in phase while charging and out of phase during discharging. Solar-powered EVs reduce grid dependence and provide clean, smooth vehicle movement.
4	Implementation of a Renewable Energy-Based Power-Electronic System to Power Remote Smart Houses	Kotha Yagna Sai Teja (18BEE0023) Utkarsh Srivastava (18BEE0016)	This article proposes a step-up step-down DC-DC system for smart homes, integrating renewable energy sources like PV, fuel cell, battery and hybrid vehicles. The system uses nine power switches with independent and dependent duty cycles, maximizing electricity from PV sources and regulating bus-bar voltage. Simulations using PSCAD/EMTDC were conducted to demonstrate system capacity and its potential for remote smart home applications.
5	Comparative analysis of various MPPT Algorithms on PV and Wind Systems	Dharani Dharan K R (18BEE0027) S Akash (18BEI0109)	This article analyzes and compares MPPT algorithms on PV and wind systems, focusing on performance under standard load conditions. The main goal is to reach maximum generation output. Design approach, specifications and schedule are discussed. MATLAB Simulink is used for model implementation. The main goal is to vary duty cycle of the boost converter for maximum power output.

6.0 ALUMNI SPOTLIGHT

Siddharth Sinha works at Google, leading Public Policy in India for technology products and platforms linked to climate mitigation and adaptation, sustainability, and liveable cities. Before joining Google, Siddharth worked at the G20 Secretariat during 'India's Presidency as the Adviser to 'India's G20 Sherpa. Siddharth joined the Indian Government through the Young Professionals Program of the National Institution for Transforming India (NITI Aayog), the 'government's apex policy-making institution headed by the Prime Minister. He went on to become the 'CEO's Chief of Staff. During his tenure, Siddharth led two of 'India's key transport decarbonization projects, contributed to national policies on transformative mobility, climate, and circular economy, and served as 'India's representative to the OECD-ITF. Outside of work, Siddharth is a mountaineer and a passionate public speaker. He founded an NGO that works with youth from vulnerable communities to tackle challenges, including substance abuse and sexual abuse. An electrical engineer, Siddharth holds a 'Master's in Public Administration from the London School of Economics and Political Science.

Development of Wearable Cuff-Less Blood Pressure Measurement Device Using Machine Learning

17BEE0041-SPARSH RAJ

Blood pressure (BP) monitoring is crucial for detecting and managing cardiovascular diseases. Traditional cuff-based BP measurement devices can be uncomfortable and inconvenient for continuous monitoring. This report explores the development of a wearable, cuff-less BP measurement device leveraging machine learning techniques. The system integrates physiological signal acquisition, feature extraction, and predictive modeling to estimate BP values accurately.

Home Energy Management System with Renewable Energy Sources: Usage Storage & Supply to Grid

17BEI0086-GARVIT PUJARI

A Home Energy Management System (HEMS) with renewable energy sources is crucial for optimizing energy usage, storage, and supply to the grid. This study presents an intelligent HEMS that integrates multiple renewable energy sources, such as solar PV and fuel cells, to enhance energy efficiency and grid interaction. The system dynamically manages power distribution between household loads, energy storage systems (ESS), and grid supply based on real-time demand and generation. A smart controller ensures optimal energy flow by prioritizing renewable sources, efficiently utilizing stored energy, and minimizing grid dependency. The proposed system enhances energy reliability, reduces electricity costs, and contributes to sustainable energy practices. Simulation and experimental validation demonstrate the effectiveness of the HEMS in ensuring an efficient, stable, and eco-friendly home power management strategy.

Development of Low-Vision aid for personalized visual correction using machine learning algorithms

17BEE0673-KUMAR VISHAKHA VINIT, 17BEE0501-VIGNESH

Low-vision impairment significantly affects the quality of life, necessitating personalized assistive solutions for enhanced visual perception. This study presents the development of a low-vision aid that utilizes machine learning algorithms for personalized visual correction. The system integrates real-time image processing and adaptive enhancement techniques to optimize visual output based on individual user preferences and visual deficiencies. A deep learning-based approach is employed to analyze user responses and dynamically adjust contrast, brightness, edge detection, and magnification levels. The proposed device, implemented using embedded vision hardware, provides a customizable interface to accommodate varying levels of vision impairment. Experimental validation and user trials demonstrate the effectiveness of the system in improving object recognition, readability, and overall visual experience. The results indicate that machine learning-driven personalized correction significantly enhances visual accessibility for individuals with low vision.
